Ordinary Legislation. Copies of all legislative proposals would be sent at the time of their introduction to the members of the Council of State, which would be empowered to declare any such measure as " differentiating " at any time before its third reading. The Legislative Council would then be obliged to suspend further consideration for a period not exceeding four months, until a report from the Council of State had been received. After consideration of this report, the Legislative Council would " communicate its decision " to the Council of State. In the event of a measure being passed by the Legislative Council despite the Council of State's recommendation to the contrary, the latter would be able to request the Governor to reserve the Bill " for the signification of Her Majesty's pleasure." This the Governor would be obliged to do, " unless he is satisfied that immediate implementation is necessary in the public interest." The final decision would rest with the Colonial Secretary.

Subordinate Legislation. Copies of such measures would be sent on publication to members of the Council of State, which, should it consider any measure to be " differentiating," would report its views within 30 days to the Governor, who would then decide whether or not the measure should be annulled.

Mr. Lennox-Boyd pointed out that the creation of a Council of State would " not introduce a bi-cameral system of legislature " (i.e. it would not have the functions of a second Chamber, and would not be able to initiate legislation) ; nor would it interfere with the powers of the Governor or of the Colonial Secretary. Its powers would be solely those of " delay, revision, and reference " in order " to protect any one community against discriminatory legislation harmful to its interests."

Increase in African Elected Representation.

The new Constitution provided increased African representation in the Legislative Council by creating ten new African seats—six directly elected, and four specially elected. These provisions, however, had not satisfied the existing African members, who on Nov. 13, 1957, had rejected the proposals and called for " a constitutional conference presided over by an impartial expert."

The African members' objections were threefold, as recapitulated in a letter by Mr. Tom Mboya (leader of the African Members' organization) published in *The Times* of May 13, 1958 : (1) the representation of 50,000 Europeans by 14 directly elected members and of 6,000,000 Africans by the same number was " neither fair nor just " ; (2) because of the " dominant numbers of Europeans " in the Legislative Council, the provision of specially elected African seats would be " nothing but a rubber stamp for European selections"; (3) the creation of a Council of State " was unnecessary in the present circumstances."

The African members accordingly boycotted the debate on a Bill to increase the number of African elected members from eight to fourteen, which was passed through all its stages in the Legislative Council on Jan. 16, 1958. Voting took place between March 22-24 in four of the new constituencies, candidates in the other two being returned unopposed. In the Central Province (South) constituency, Mr. Ehud Mathu—former leader of the African members in the Legislative Council—was defeated by Dr. Julius Kiano, an outspoken critic of the new Constitution. During the election campaign all the African candidates had expressed varying degrees of opposition to the new Constitution ; those elected, together with the eight existing African members, decided on March 26 to boycott both nomination and election proceedings for the African special seats (see below). Despite this boycott, however, nominations for those seats were duly made.

Elections to Special Seats.

Elections for 10 of the 12 new special seats were held on April 22, candidates for the two Asian non-Moslem seats being returned unopposed. There were eight nominations for the four African seats, five for the four European seats, and two each for the Arab seat and the Asian Moslem seat. The successful candidates were :

African—Musa S. Amalemba ; J. M. Muchura ; N. G. Ngome ; Wanyutu Waweru.

European—Michael Blundell* ; W. B. Havelock* ; B. R. McKenzie ; H. Slade.

Asian (non-Moslem)—Chunilal Madan ; N. S. Mangat.

Asian (Moslem)—I. E. Nathoo.*

Arab—Sheikh Mohammad Ali Said el Mandry.

*Former Minister.

[Mr. Slade polled the same number of votes as the former Finance Minister, Mr. E. A. Vasey, but was awarded the seat after lots had been drawn, as required by the election regulations.]

Shortly after their election all the 12 specially elected members issued the following joint statement :

" We, the specially elected members of the Legislative Council of Kenya . . . have resolved to form an Association with the primary object of promoting policies for the benefit of Kenya as a whole, without racial or sectional bias . . . It is our intention to produce a policy statement which will provide a lead and a guide to the vast numbers of peoples of all races in Kenya whose main desire is the economic, political, and social development of the country as a whole, and not the propagation of selfish interests, nor the domination of one race or sect over another."

Ministerial Appointments.

The White Paper of Nov. 15, 1957, had stated that " once the extra African seats . . . have been filled " two African Ministers would be selected—one to hold the portfolio of Housing, and the other that of Community Development. Before the announcement of the composition of the new Council of Ministers on April 29 it had been decided that the portfolio of Community Development should be left vacant " for the time being " in view of the fact that African constituency-elected members were not prepared to accept office. The appointment of the Minister for Education, Labour, and Lands was also deferred until Aug. 20. The ministerial appointments were as follows :

Officials.	
Mr. W. F. Coutts	Chief Secretary
Mr. E. N. Griffith-Jones	Attorney-General
Mr. C. M. Johnston	African Affairs
Mr. W. A. C. Mathieson	Education, Labour, and Lands
Mr. J. W. Cusack	Defence and Internal Security
Mr. A. Hope-Jones	Commerce and Industry
Nominated Ministers.	
*Mr. E. A. Vasey	Finance
*Mr. D. L. Blunt	Forest Development
Elected Ministers.	
*Mr. Michael Blundell	Agriculture
*Mr. W. B. Havelock	Local Government and Health
†Mr. W. E. Crosskill	Tourism and Common Services
‡Mr. M. Amalemba	Housing
*Mr. I. E. Nathoo	Works
Mr. N. F. Harris	European Minister without portfolio
*Mr. C. B. Madan	Asian Minister without portfolio.

*Former Minister. †New Ministry. ‡African Appointment.

The new Constitution had also provided for the appointment of six Assistant Ministers (formerly styled Parliamentary Secretaries)—two European, two African, one Asian, and one Arab. The Asian appointment and one of the African appoint-

ments were announced on April 29, viz.: Sheikh Mohammad Ali Said el Mandry (Minister of Forest Development), and Mr. Wanyutu Waweru (Minister of Education).

Mr. Lennox-Boyd, in a dispatch to the Governor of Kenya on April 23, had stressed that those persons recommended for for appointment as Ministers should be prepared to work for the following "broad objectives":

"(1) Building within the British Commonwealth a strong and prosperous Kenya owing loyalty to the British Crown; (2) promoting racial harmony and friendliness and developing opportunities for all loyal subjects (irrespective of race or religion) to advance in accordance with character and ability; (3) securing that individual rights of private property are respected."

Council of State.

The composition of Kenya's first Council of State (see above) was announced at the end of May, the inaugural ceremony being held on June 2. The chairmanship of the Council was accepted by Sir Donald MacGillivray, formerly High Commissioner for Malaya.

Conspiracy Trial of African Members.

The seven African elected members of the Legislative Council, who had boycotted all proceedings in connexion with the March elections to the four specially-elected African seats under the new Constitution (see above), appeared in the magistrate's court at Nairobi on May 27 in answer to summonses charging them on two counts: (1) "that on or about March 25 they published defamatory matter affecting prospective candidates for the special seats;" (2) that they had "conspired to commit a misdemeanour" in influencing six Africans who had announced their intention of seeking election to the special seats to refrain from doing so. The seven defendants were Mr. Tom Mboya, Mr. I. Odinga, Mr. M. Muliro, Mr. L. G. Ogudo, Mr. D. T. Arap Moi, Mr. J. M. Muimi, and Mr. R. Ngala.

The Solicitor-General (Mr. D W. Conroy) said that it was clear that if no African had come forward for nomination as candidate for a special seat, it would have been "a victory for the African members' rejection of the Constitution." When six Africans had actually announced their intention to seek nomination, the African Members' organization had issued a statement to the Press on March 25 which included the following passage "Be it known to the African community that now we know all the stooges, quislings, and black Europeans in our community . . . These stooges should be treated with the contempt they deserve. In this struggle for our freedom a time comes when what the majority desire must be respected and when a few self-seeking opportunists must not be allowed to stand in the way of our political development . . . Those who now seek to stand have identified themselves with those who seek the perpetuation of the oppression of the African people, and consequently must be treated as traitors to the African cause. The African community is entitled to enforce an economic, social, and political boycott of these traitors."

The Solicitor-General said that the Crown proposed to prove that the six would-be candidates had been exposed to "contempt, hatred, and ridicule," and that the prosecution had been brought "to vindicate the law and to preserve freedom of speech, thought, and action among the African community"—a freedom which included allowing those with opposing views to express them "with equal liberty." Counsel for the defence (Mr. D. N. Pritt) pleaded "fair comment and justification."

The magistrate decided on June 3 that the defendants had no case to answer on the second charge (of conspiring to commit a misdemeanour), but on June 11 they were all found guilty of criminal libel under the first charge, and fined £75 each.

Allegations on Mau Mau Prison Conditions.

The Chief Secretary (Mr. W. F. Coutts) made a statement in the Kenya Legislative Council on June 11 denying allegations of lack of rations, water supplies, and medical and visiting facilities in Lokitaung Prison (Northern Province), where a few Mau Mau convicts were under detention.

The allegations, which included complaints of ill-treatment, were contained in a letter—said to have been smuggled out of the prison—which had received considerable press publicity in the United Kingdom and India.

Mr. Coutts said that the five signatories to the letter had described themselves as "political prisoners," which was "quite incorrect." All of them were serving sentences for criminal offences, and included "some of the most dangerous leaders of Mau Mau." He added that the Government had been aware of the allegations for some time, and had satisfied itself by investigation that they were unfounded before they had received publicity.

The Chief Secretary was speaking in reply to a motion by Mr. Tom Mboya demanding an independent inquiry into conditions in Kenya prisons and detention camps. The motion was defeated without a division.

New Kenya Political Party.

At a convention of the Capricorn Society on Nov. 23, 1957, its then president (Colonel David Stirling) announced the formation of a new multi-racial political party to be named the Kenya Party. It would aim at developing a common national purpose to supersede racial loyalties and permit the growth of parliamentary democracy based on a common franchise roll, thus being in many respects similar to the former United Country Party sponsored by Mr. Michael Blundell but dissolved early in 1957 (see 15632 A).

Continuation of State of Emergency. - Progress in Mau Mau Rehabilitation.

The Legislative Council debated on Oct. 15 a motion, supported by African members, to end the state of emergency immediately.

The Minister for African Affairs (Mr. Johnston) stated during the debate that of the 77,000 Mau Mau originally detained during the emergency, a total of 72,000 had been released to date. Moreover, of the 3,200 persons sentenced for Mau Mau offences, some 2,900 had been "transformed" into detainees and would be "placed in the pipeline" for accelerated release. Mr. Johnston added: "I am glad to say that this bold step in rehabilitation has been successful on the whole"

The Chief Secretary (Mr. Coutts), opposing the motion, mentioned the existence of *Kuama Kia Muingi* as an important reason why the emergency could not be lifted at present. "It is an aftermath of Mau Mau," he said, "and 95 per cent of the people involved in K.K.M. were actively associated with Mau Mau." Recently they had found some ex-detainees in K K.M. cells in the Nyeri and Embu district, and "when we have that and in the same district people storing up rat poison—a new feature, presumably for criminal purposes—and still taking bestial oaths, including the double-killing oath, then I do not see how we can possibly lift the emergency at this moment." Referring to what he called the "Jomo cult" [i.e. the cult of the former Mau Mau leader Jomo Kenyatta], Mr. Coutts expressed the opinion that if people tried to keep "green" the name of a man who had been convicted of a criminal offence, it could only be "for the subversion of law and order."

At the end of the debate the Council rejected the African members' motion and approved an amendment by Mr. Johnston calling for the ending of the emergency "as soon as possible." (Times - Daily Telegraph - Manchester Guardian - Commonwealth Survey). **(Prev. rep. Kenya, 15869 A).**

A. UNITED STATES. — Democratic Victory in Maine Congressional and Gubernatorial Elections.

The Democratic Party made important gains in the Congressional and Gubernatorial elections held on September 8 in Maine, a traditionally Republican State. Results were as follows: (1) in the election for a member of the U.S. Senate, Mr. Edmund S. Muskie (the Democratic Governor of Maine) defeated Senator Frederick G. Payne (the incumbent Republican senator) by 170,251 votes to 111,945, the returns being complete for all but one of the State's 629 precincts; (2) in the elections for three members of the House of Representatives, the Democrats obtained two seats (one gain from the Republicans) while the third was retained by the Republican Party; (3) in the Gubernatorial elections, Dr. Clinton A. Clauson (former mayor of Waterville) retained the State Governorship for the Democrats by defeating Mr. Horace A. Hildreth, a former Republican Governor of Maine.

Mr. Muskie (44) became the first Democratic Governor of Maine in 1954 (see 13803 B) and was re-elected for a second term in 1956; by defeating Senator Payne he became the first Maine Democrat to be elected to the Senate by popular vote. Senator Payne, like Mr. Sherman Adams (the former Presidential Assistant), had admitted receiving gifts from Mr. Bernard Goldfine (see 16347 A), although this matter was not mentioned by Mr. Muskie in his electoral campaign. The *New York Times* commented, however, that apart from Mr. Muskie's personal popularity, "Mr. Payne's acknowledged acceptance of favours from Mr. Goldfine was interpreted as having swayed many voters against him, although he carried a Presidential endorsement."

Since its admission to the Union in 1820, Maine has always held its Congressional and Gubernatorial elections in advance of the rest of the country. Under a recent amendment to the State Constitution, however, Maine will hold these elections in November—as in all other States of the Union—beginning in 1960. (New York Times - New York Herald Tribune) **(Prev. rep. 15237 A; 13803 B)**

B. FRANCE. — M. Maurice Herzog appointed High Commissioner for Youth and Sport.

The *Journal Officiel* published two decrees on Oct. 5: (1) creating the post of High Commissioner for Youth and Sport within the Ministry of Education; and (2) announcing the appointment of M. Maurice Herzog to the post. M. Herzog led the French Himalayan expedition which made the first ascent of Anapurna (26,926 ft) in 1950—see 11128 F.

(Le Monde, Paris)

A. UNITED STATES. — The Goldfine Case. - Resignation of Mr. Sherman Adams. - Major-General Persons appointed President Eisenhower's Assistant.

A bitter political controversy was aroused when it was revealed in June that Mr. Sherman Adams, Assistant to President Eisenhower since 1953, had accepted valuable gifts and favours from Mr. Bernard Goldfine, a New England textile manufacturer. This was discovered as a result of investigations by the Subcommittee on Legislative Oversight, a body set up by the House of Representatives in 1957 to examine the working of Federal regulatory agencies. Mr. Adams, whilst admitting the receipt of the gifts from "an old personal friend," emphatically denied that he had ever attempted to influence the decisions of Government agencies on Mr. Goldfine's behalf.

Records produced by the Subcommittee showed that Mr. Goldfine had paid hotel bills totalling $3,096 for Mr. Adams between December 1953 and May 1958, had lent him for his Washington home an oriental rug costing $2,400, and had given him material for a vicuna fur coat worth $700. It was also alleged that Mr. Adams had on three occasions attempted to influence Federal agencies on Mr. Goldfine's behalf—in 1953 and again in 1955 in connexion with complaints lodged with the Federal Trade Commission that certain of his fabrics were misleadingly labelled, and in 1956 when the Securities and Exchange Commission brought actions against two real estate companies, in which Mr. Goldfine was interested, for failure to file annual reports.

Mr. Adams gave evidence before the Subcommittee on June 17, although in the past he had consistently refused to appear before Congressional committees investigating administrative actions, on the ground of Executive privilege or his confidential relationship with the President. Mr. Goldfine, he said, was an "old personal friend," and his gifts and favours had had "no strings attached." He agreed that he had made some personal inquiries of the Federal Trade Commission and the Securities and Exchange Commission for Mr. Goldfine, and admitted that he might have acted "a little more prudently"; he denied, however, that he had ever sought preferential treatment for Mr. Goldfine and said that his errors, if any, were "mistakes of judgment and not of intent." When counsel for the Subcommittee suggested that Mr. Adams had passed on to Mr. Goldfine confidential information on the cases involving him, contrary to both Federal law and the regulations of the two Commissions concerned, Mr. Adams said that he did not know that the information was confidential, that he was unfamiliar with the statutes and regulations cited, and that what he had done had been a matter of "routine practice." The White House Press Secretary (Mr. Hagerty) denied on June 18 that the information passed on by Mr. Adams had been confidential.

Mr. Goldfine, who appeared before the Subcommittee from July 2-17, testified under oath that he had never asked Mr. Adams "to do anything out of line, and he never did anything for me that was out of line." He described Mr. Adams as one of his "dearest friends" for nearly 20 years, and, in order to prove that he had in turn received valuable presents from Mr. Adams, produced his wrist-watch which Mr. Adams had given him in 1953. He admitted, however, that he had given cheques to Federal employees, including employees of the Federal Trade Commission and the Securities and Exchange Commission; that he had paid hotel bills for Senator Payne (Maine) and two other Republican senators; and that he had entered these items, together with his gifts to Mr. Adams, as "business expenses" on his income tax returns. He repeatedly, refused to answer questions about certified treasurer's or cashier's cheques totalling $776,879 which had been issued to him or his companies by State or National banks since 1941 but had remained uncashed. [Treasurer's cheques are issued by a State bank, while cashier's cheques are issued by a National bank. Both types are signed by bank officials and payable by the bank itself; the name of the individual purchasing such cheques does not appear on them and thus remains "masked" or "concealed."] The Subcommittee's counsel suggested that the cheques might have been used for the benefit of public officials or employees, serving as collateral for loans obtained by them, but Mr. Goldfine, in his testimony, denied any such use. However, because of his refusal to produce his records on the cheques (on the ground that the questions were not relevant to the inquiry), the House of Representatives voted on Aug. 13, on the Subcommittee's recommendation, that Mr. Goldfine should be cited for contempt of Congress.

Although President Eisenhower expressed on June 18 his complete confidence in Mr. Adams's "personal and official integrity" and spoke of him as an "invaluable public servant" whom he "needed," prominent Republicans, including Senator Knowland (the party leader in the Senate), repeatedly demanded the resignation of Mr. Sherman Adams on the ground that he had become a "political liability" to the party. These demands were strengthened by the Democratic victory in the elections in Maine (normally a Republican stronghold), which were held on Sept. 8 [see 16436 A]. Among the defeated candidates was Senator Payne, who had acknowledged that he had accepted gifts and favours from Mr. Goldfine and had approached the Securities and Exchange Commission for information on the case in which Mr. Goldfine was involved.

Mr. Sherman Adams announced in a broadcast on Sept. 22 that he had resigned his post as Presidential Assistant. A letter from President Eisenhower accepting his resignation, which was published at the same time, paid tribute to his "selfless and tireless devotion to the work of the White House and to me personally" and his "total dedication to the nation's welfare."

Mr. Adams said in his broadcast that his sworn testimony before the Subcommittee, together with that of every responsible official of whom it made inquiry, had "clearly established that I have never influenced or attempted to influence any agency or any officer or employee of any agency in any case, decision, or matter whatsoever." He added: "Despite the fact that this testimony is wholly undisputed, a calculated and contrived effort has nevertheless been made to attack and discredit me. As part of this effort the committee received completely irresponsible testimony, and without conscience gave ear to rumour, innuendo, and even unsubstantiated gossip. A campaign of vilification by those who seek personal advantage by my removal from public life has continued up to this very moment. These efforts, it is now clear, have been intended to destroy me and, by so doing, to embarrass the Administration and the President of the United States."

Mr. Adams went on to explain that he had not resigned at the time because, "since I have done no wrong, my resigning could have been construed as an admission that I had, in the atmosphere which has surrounded the controversy." In the light of the events of the past three months, however, he had asked himself "whether my retention in office might conceivably delay or retard, even in small degree, the achievement of those goals of President Eisenhower which yet are ahead," and "might possibly diminish the chances which my party has of regaining control of the Congress in the November elections" In the circumstances he had come to the conclusion that "I can now best serve my President and contribute to the support of his objectives by the course I have undertaken to follow."

On Sept. 28 President Eisenhower appointed Major-General Wilton B. Persons (62) as Presidential Assistant in place of Mr. Sherman Adams. General Persons had been deputy to Mr. Adams since 1953 and had been principally concerned with Congressional liaison.—(New York Times)

(Prev. rep. 12597 A.)

B. AUSTRALIA - UNITED KINGDOM. — New Price Agreement for Australian Meat Supplies. - Higher Quota for Free Australian Exports to Other Countries.

Negotiations opened in London on June 16 between Australian and British officials to discuss the future guaranteed minimum prices for Australian meat exported to Britain under the 15-year meat agreement of 1951. It was announced in Canberra and London on Oct. 3 that an agreement had been reached under which the guaranteed minimum prices would be reduced, whilst the free quota—i.e. the maximum amounts of meat that could be exported by Australia to countries other than Britain and British colonies—had been increased. Details were as follows:

Beef and Veal. For the three years beginning Oct. 1, 1961, a reduction of nine per cent on prices already agreed for 1958-61, or 14 per cent on current minimum prices.

Mutton and Lamb. Minimum prices settled for the two years beginning Oct. 1, 1958, leaving those for the third year to be decided. The minimum price for lamb in the two years would be five per cent below the current price, and for mutton 15 per cent below.

Free Quota. For the next three years (Oct. 1, 1958-Sept. 30, 1961) the maximum quota would be 7,500 tons a year for first and second quality beef and veal, with no restrictions on the lower grades of beef and veal and on all exports of mutton and lamb. After 1961 all restrictions on free trade would be removed.

The Australian Minister for Primary Industry (Mr. McMahon) described the new arrangements as "not unfavourable" to Australian producers. The new prices represented a guaranteed "floor" level, but producers were entitled to whatever the market offered above these prices, and for several months Australian beef prices in the U.K. had been well above the minimum. There was complete freedom to exploit fully mutton and lamb markets outside the U.K., whilst the increased free quota for beef allowed unrestricted exports of lean meat to the U.S. market. Mr. McMahon added that the British Government had already paid Australia about £A.10,000,000 (£8,000,000) to support minimum prices under the 15-year agreement of 1951.

It was pointed out in the British Press that the effect of the agreement on retail prices in Britain would be nil, as Australian beef, mutton and lamb was sold on the free market and the present outlook was one of buoyant prices.—(Times - Daily Telegraph - Australian News and Information Bureau)

(Prev. rep. 15720 B; 11779 A.)

A. UNITED STATES. — Second "Moon Shot." - U.S. Lunar Probe travels One-third of Distance to Moon.

A second lunar probe—officially named *Pioneer*—was fired from Cape Canaveral at 4.42 a.m. local time on Oct. 11 by the U.S. Air Force, under the direction of the National Aeronautics and Space Administration. Like the first lunar probe (see 16372 A), it was a four-stage vehicle consisting of a first-stage *Thor* I.R.B.M. "booster," two modified *Vanguards* forming the second and third stages, and a fourth stage (shaped like a child's top) containing an instrument package, which was to have been fired in the vicinity of the moon by remote control from Hawaii so as to place it in a lunar orbit.

Weight and thrust statistics for the *Pioneer* vehicle were as follows: first stage (the *Thor* I.R.B.M.)—weight over 100,000 lb., thrust about 150,000 lb.; second stage—weight over 4,000 lb., thrust about 7,500 lb.; third stage—weight over 400 lb., thrust about 2,500 lb.; fourth stage (a solid propellant retro-rocket plus instrument package)—weight 82.7 lb., thrust 3,000 lb. The vehicle as a whole stood over 88 ft. and weighed 52 tons.

Although *Pioneer* failed to reach the moon, which was 220,000 miles distant at the time of the experiment, it achieved a great measure of success by travelling nearly 80,000 miles into outer space before falling back to earth; according to calculations, it re-entered the earth's atmosphere about midnight of Oct. 12-13 at a point over the South Pacific in latitude 20 deg. S. longitude 106 W., and was believed to have burned out or to have plunged into the ocean. All scientific equipment functioned perfectly throughout *Pioneer's* 79,212-mile journey into outer space and its fall back to earth, and data of the highest importance were obtained with regard to position and velocity, radiation, and micro-meteoric, magnetic and temperature readings. The television equipment (with which it was hoped to take photos of the far side of the moon) did not function because it was designed to operate only in the immediate vicinity of the moon; thus no pictures were obtained of the appearance of the earth as seen from outer space.

It was officially explained that the reason for *Pioneer's* failure to reach the moon was a gyroscopic error of 3½ degrees in the angle of launching; that is, *Pioneer* was 3½ degrees off course, which would have meant a difference of 12,000 miles in the vicinity of the moon. This error, though relatively small in itself, meant that *Pioneer's* velocity was about 500 m.p.h. less than had been intended—i.e. about 23,500 m.p.h. instead of 24,000 m.p.h. Had the full speed of 24,000 m.p.h. been obtained, it might still have been possible to place *Pioneer* in a lunar orbit, although it was 3½ degrees off course; but the difference of 500 m.p.h. between the actual and the projected speeds deprived *Pioneer* of the velocity necessary to complete the journey to the moon.

Nevertheless, data of the greatest importance for the future of manned space flight were obtained as a result of *Pioneer's* epoch-making journey of 79,212 miles into outer space. Although the information telemetred back to earth was still being studied and analysed, it had been ascertained for the first time (1) that the belt of intense radiation discovered by the *Explorer* satellites (see 16200 D) reached a maximum of 4 roentgens per hour at an altitude of 5,700 miles; (2) that radiation fell off rapidly beyond 5,700 miles, being 2 roentgens per hour at 20,000 miles and only 0.3 roentgens at 60,000 miles; (3) that the internal temperature inside *Pioneer's* shell (71 deg. F. at the time of launching) dropped to 41 deg. F. three hours after take-off and then stabilized at 35-36 deg. F. in outer space; (4) that the intensity of micro-meteoric bombardment was much less than anticipated—only two impacts of micro-meteorites being recorded, whereas thousands had been expected. As pointed out by U.S. scientists, these data showed that radiation hazards in manned space flight would be much less than had been assumed, and that temperatures in a space vehicle would be "within the range of human survival if not of comfort."

The experiment was in charge of Major-General Bernard A. Schriever, head of the Air Force Ballistic Missile Division. In a press statement, General Schriever listed *Pioneer's* achievements as follows: (1) by going one-third of the distance to the moon, it had reached a height 30 times greater than had ever been achieved before; (2) it was the first space vehicle to measure radiation at a height of over 2,500 miles; (3) it was the fastest man-made vehicle yet launched into outer space, its velocity of 34,400 feet being equivalent to 23,500 m.p.h.; (3) it had provided the first direct measurements of the earth's magnetic field at great altitudes. All this represented "a very great scientific and technical achievement" and gave confidence that "our ultimate objective of an orbit round the moon" would be accomplished "in the not too distant future."

Pioneer was tracked throughout its flight by the Jodrell Bank radio telescope (England), which took a total of 122 "fixes" of its position with the greatest accuracy; the results were communicated to the U.S. scientific authorities by Professor Lovell, who paid high tribute to the American achievement and said that "priceless information" had been obtained as a result of the experiment. Telemetric readings from *Pioneer* were also obtained by U.S. tracking stations at Inglewood (California), Hawaii, and Cape Canaveral.

(Prev. rep. Lunar Probe, 16372 A.)

B. UNITED KINGDOM - UNITED STATES. — Anglo-American Defence Discussions. - Mr. Sandys's Visit to Washington. - Joint Statement with Mr. McElroy.

Mr. Duncan Sandys, the U.K. Minister of Defence, arrived in Washington on Sept. 22 for discussions with Mr. McElroy, the U.S. Secretary of Defence, on mutual defence co-operation as well as on defence problems in the Middle East and the Far East. During his visit Mr. Sandys also saw Mr. Dulles and other senior U.S. officials, while General Twining (chairman of the U.S. Joint Chiefs of Staff) and Mr. Robert Murphy (Deputy Under-Secretary of State) took part in some of the discussions between Mr. Sandys and Mr. McElroy.

A joint statement was issued at the conclusion of the talks on Sept. 24 announcing (1) that Mr. Sandys and Mr. McElroy had exchanged views on the proposed suspension of nuclear tests and on means of achieving an effective international system of inspection to guard against surprise attack; (2) that they "agreed upon the essential need to maintain effective military forces, both conventional and nuclear, in a high state of readiness"; (3) that they had examined "new and wider possibilities" for co-operation in weapon design and development opened up by the recent amendment of the U.S. Atomic Energy Act and the Anglo-American bilateral agreement; (4) that they had "reviewed the progress of the recent talks among experts of the two nations at which information on nuclear weapons was exchanged." The communiqué added that the results of the talks had "further emphasized the frank and intimate relationship between the two countries."

It was authoritatively reported in the British and U.S. Press that Mr. Sandys had been fully informed of the military position in the Formosa area; that he had discussed with Mr. McElroy the position of Hong Kong, without seeking American assurances; and that the talks had also dealt with the Middle East. As regards Anglo-U.S. defence co-operation, the Ministers had discussed the implementation of the agreement for the supply to Britain of *Thor* intermediate missiles, and it had transpired that delivery of the *Thor* might be six or nine months later than was first predicted. Mr. Sandys had expressed Britain's interest in the more advanced types of missiles, while at the same time reporting on advanced ballistic missiles developed by Britain which were propelled by solid rather than by liquid fuel.

Mr. Sandys left Washington on Sept. 25 for a tour of defence installations and missile centres, including Cape Canaveral (Florida) and Los Angeles. He returned to London on Oct. 5.

In a press statement on his return Mr. Sandys said that Britain's future need of larger and longer-range air freighters had been discussed in his talks in the U.S.A.; the Americans had given him full particulars of those they were developing, though no decision had been taken about buying their aircraft. The importance of the talks lay in the fact that they were the first major Anglo-American defence discussions since the amendment of the U.S. Atomic Energy Act; "as a result," he added, "no topics are now barred and all cupboards are open." Mr. Sandys said that there were no immediate plans to buy American missiles other than the *Thor*, the testing of which was going satisfactorily.—(Times - Daily Telegraph - Manchester Guardian - New York Times - N.Y. Herald Tribune)

C. INDIA. — Cultural Agreement with U.A.R.

A ten-year cultural agreement between India and the United Arab Republic was signed in Cairo on Sept 25 by Dr. Fawzi, the U.A.R. Foreign Minister, and Mr. R. K. Nehru, the Indian Ambassador.

The agreement provides for exchanges of teachers and members of scientific and cultural institutions; for scholarships to enable students of either country to pursue higher studies in the other; for mutual recognition of degrees and diplomas; and for general co-operation in science, education, and culture. It comes into force 15 days after exchange of ratifications.

The agreement was the eighth cultural agreement concluded by India since her achievement of independence in 1947, the others being with Indonesia, Iraq, Japan, Persia, Poland, Rumania, and Turkey.—(The Statesman, Calcutta)

A. LEBANON. — Election of President Chehab. - New Cabinet formed by M. Rashid Karami. - Supersession by Coalition Government. - Reports of U. N. Observation Group. - Agreement on Withdrawal of U.S. Forces.

General Fuad Chehab, Commander-in-Chief of the Lebanese Army, was elected President of Lebanon by the Chamber of Deputies on July 31, with the support of both pro-Government and Opposition members; he formally assumed office on Sept. 23, when President Chamoun's term expired. A new Cabinet was formed on the following day by M. Rashid Karami (leader of the insurgent forces in Tripoli), and reached agreement with the U.S. authorities on Sept. 27 whereby U.S. forces were to be withdrawn from Lebanon by the end of October. The internal situation subsequently deteriorated once more and, for a time, threatened to lead to a further outbreak of civil war; this danger was averted, however, by the formation of a coalition Cabinet—also headed by M. Karami—representing both Government and Opposition leaders. These and other related Lebanese developments are described below under cross-headings.

Election of President Chehab.

The Speaker of the Lebanese Chamber of Deputies (M. Osseiran) announced on July 23 that a special session would be held on July 31 to elect a successor to President Chamoun, and on July 28 General Chehab was proposed as a candidate by a group of deputies who included both Government and Opposition supporters. At a Cabinet meeting on July 29, M. Sami Solh (whose car had been ambushed near Beirut earlier in the day) demanded that the elections should be postponed until General Chehab had "cleaned up" the rebel areas in the capital; President Chamoun, however, won over the majority of the Government deputies to support General Chehab's candidature by threatening to resign and leave the country immediately unless they agreed to do so.

A meeting of Opposition leaders decided on July 29 to support any candidate who accepted their programme, which included the immediate resignation of President Chamoun, the formation of a new Government, the evacuation of foreign troops, a foreign policy based on neutrality and collaboration with other Arab countries, revision of the Constitution, amendment of the electoral law, and a general amnesty for the insurgents. As a result of talks between General Chehab and M. Karami, it was announced that the Opposition deputies—whose immunity from arrest had been guaranteed by the general—would attend the election session of Parliament.

The election session was accordingly attended by 56 of the 66 deputies, among them M. Karami; M. Solh and three other Ministers refused to attend on the ground that, under the existing Constitution, an officer in the armed forces could not accept the presidency within six months of holding a military post. On the first ballot 42 votes were cast for General Chehab and 10 for M. Raymond Eddé (leader of the pro-Government National Bloc), with four abstentions, whilst on the second ballot General Chehab received 48 votes and M. Eddé seven, one deputy abstaining. [Under the Lebanese Constitution, if no candidate is elected by a two-thirds majority of the total membership of the Chamber on a first ballot, a second ballot is held in which only a simple majority is required; General Chehab actually obtained a two-thirds majority on the second ballot.] Of the deputies voting for General Chehab in the second ballot, 31 were Government supporters and 17 Opposition supporters.

General Fuad Chehab (56) is a member of a distinguished Lebanese family and a direct descendant of the Emir Bechir el-Chehab, who as Governor of Mount Lebanon from 1785-1831 achieved a degree of independence from Turkish rule, but was finally deposed and died in exile. General Chehab studied at the French military academies at Damascus and St. Cyr, served in the French Army, and on the proclamation of Lebanese independence in 1943 was promoted to the rank of general, becoming C.-in-C. in 1945. Although his basic policy has always been to maintain the political neutrality of the Army, he had twice previously taken political office to help surmount a critical situation. On the first such occasion he intervened in the political crisis of September 1952 to compel President el-Khoury to resign, and himself assumed the premiership; he refused to accept the presidency, however, and resigned when M. Chamoun was elected President, having held office for only six days (see 12462 A). On the second occasion he assumed office as Defence Minister at the time of the Suez crisis in November 1956, but resigned two months later. A Maronite Christian, he was believed to have been influenced in his decision to accept nomination for the presidency by the representations of the Maronite Patriarch, Mgr. Meouchi, who had first suggested that he should assume power (see 16293 A).

In a broadcast on Aug. 4, General Chehab said that he had accepted the presidency only because, "in the difficult circumstances through which our country is passing, no one could any longer hesitate to assume a mission to which the country calls him." He appealed for national unity, stability, and tranquillity as a pre-condition for achieving the country's sovereignty, independence, and national aims, of which the foremost was "the withdrawal of foreign troops from Lebanese territory."

An extremely confused situation followed General Chehab's election to the presidency. Although the Opposition had demanded President Chamoun's immediate resignation and the formation of a new Government as conditions of their support for the general, President Chamoun stated on July 31 that he would retain office until the expiry of his constitutional term on Sept. 23; he also denied reports that M. Solh's Cabinet would resign or that Opposition representatives would be included in it. The rebel leaders, on the other hand, refused to submit to the Solh Government and proclaimed an "armed truce," maintaining their positions in the Moslem quarter of Beirut, in Tripoli, and in the rural areas under their control.

Most of the incidents which occurred during the fortnight following General Chehab's election were, however, believed to have been due to feuds between extremist elements on both sides or to personal vendettas, and to have had little political significance. Nevertheless, as a result of the continued political uncertainty, acts of violence became increasingly common during the second half of August, during which five people were killed in Beirut by bomb explosions.

After discussing the situation with General Chehab, M. Saeb Salam (the rebel leader in Beirut) announced on Sept. 3 that the general strike which had been enforced since May 8 would be relaxed to allow shops and offices to open until 11 a.m., this period being extended on Sept. 15 by another two hours. M. Salam's followers had previously (Sept. 1) seized a radio transmitter belonging to the Najjada, an extremist Moslem youth organization which had objected to any relaxation of the general strike before President Chamoun's resignation, and on Sept. 5 the Opposition closed down its clandestine broadcasting stations. Political organizations on both sides began collecting arms from their followers during the first week of September, although the pro-Government *Kataeb* or Falangist Party (a para-military right-wing Christian organization) announced on Sept. 7 that its own arms would be stored in private arsenals for future use if necessary. Despite this improvement in the situation incidents continued to occur, a second attempt being made on M. Solh's life on Sept. 6.

A new period of tension was caused by the disappearance on Sept. 19 of a Falangist journalist, M. Fuad Haddad. The Falangists, who accused the Opposition of abducting him, called a general strike for Sept. 22 and kidnapped a large number of Opposition supporters as hostages, threatening to kill them if M. Haddad suffered any harm. The Opposition, which denied all knowledge of M. Haddad's whereabouts, retaliated by abducting about 100 Falangists, though these were shortly afterwards released. To prevent further disturbances a strict day and night curfew was imposed on Sept. 21.

M. Solh left his home secretly in the early hours of Sept. 20, was flown by a U.S. Army helicopter to Beirut airport, and thence left for Turkey in the personal plane of Vice-Admiral Holloway (commander of the U.S. forces in Lebanon), ostensibly on a long holiday. He left with President Chamoun a letter containing his Government's resignation, to take effect on Sept. 22. On arriving in Istanbul he said that if the situation did not improve and Lebanon lost its independence, he would not return but would "fight from other countries until Lebanon becomes an independent state again."

Installation of President Chehab. - Government formed by M. Rashid Karami.

General Chehab took the oath as President on Sept. 23 in the Chamber of Deputies, in the presence of six of the 14 members of M. Solh's Cabinet, about 40 deputies, and members of the Diplomatic Corps. In his inaugural address he appealed for unity among the various sections of the population, declared that there would be "no victors and no vanquished," and said that Lebanon must strive towards a situation which would facilitate the withdrawal of foreign troops, improve relations with her sister Arab countries, and restore the national economy. He paid tribute to the firm attitude which the Army had maintained, and emphasized the importance of disarming all civilians, no matter who they were or whom they supported. After the ceremony ex-president Chamoun left Beirut for his home in a mountain village about 20 miles away, where he had announced his intention of staying for an indefinite period.

The daytime curfew in Beirut was lifted at dawn on Sept. 24 although the night curfew remained in force. During the morning, however, reports that M. Karami had been asked to form a Government led to mass demonstrations by thousands of his supporters

and counter-demonstrations by armed Falangists, who proclaimed a general strike and compelled shopkeepers to lower their shutters. Repeated clashes occurred between the two sides in which about 20 people were killed and 40 wounded—the largest number of casualties in Beirut in any one day since the beginning of the disturbances. The Army then moved in to restore order, and the Government radio repeatedly broadcast warnings that the troops had been ordered to shoot on sight any civilian found in possession of arms, and to demolish by artillery fire any building from which shots were fired. Half an hour after this announcement the firing ceased, and the streets were empty except for Army and police patrols. The 24-hour curfew was subsequently reimposed.

M. Karami formed a Cabinet drawn from the former Opposition and from neutral elements, its membership being :

M. Rashid Karami	..	Prime Minister, Defence, and Interior
M. Philippe Takla	..	Foreign Affairs.
M. Yussef Sauda	..	Justice, Labour, and Social Affairs.
M. Charles Helou	..	National Economy and Information.
M. Mohammed Safieddin		Education and Health.
M. Rafik Naja	..	Finance.
M. Fuad Najjar	..	Agriculture, and Posts and Telegraphs.
M. Farid Trad	..	Public Works, Communications, and Planning.

MM. Karami, Takla, Safieddin, and Naja belonged to the anti-Chamounist Opposition ; M. Helou (a former Ambassador to the Vatican) was a member of the " third force " or moderate Opposition ; and M. Sauda (a former Ambassador to Brazil) and MM. Najjar and Trad (both of whom are professional engineers) had not been associated with any political party. Apart from M. Karami, only one other Minister (M. Takla) was a member of the present Legislature, although MM. Helou and Safieddin had sat in previous Parliaments. By religious affiliation, MM. Karami and Naja are Sunni Moslems ; M. Safieddin is a Shia Moslem ; MM. Sauda and Helou are Maronite Christians ; M. Takla is a Greek Catholic ; M. Trad is a member of the Greek Orthodox Church ; and M. Najjar is a Druse.

M. Karami (37) is a member of a Moslem family which has exercised great influence in Tripoli since the middle ages. A lawyer, he went into politics in 1951, entering Parliament as deputy for Tripoli. He took a prominent part in the movement which led to President el-Khoury's replacement by M. Chamoun, subsequently held office in several Cabinets, and was Prime Minister for six months in 1955-56. He joined the Opposition to the Chamoun régime in 1957, when M. Solh's Government announced its support for the " Eisenhower doctrine," and was among the few Opposition deputies returned in the subsequent general elections.

Opposition Call for General Strike against Karami Cabinet. - Formation of Coalition Cabinet by Government and Opposition Parties.

Great resentment was aroused among M. Chamoun's supporters by the appointment as Prime Minister of " a man from the barricades," and on Sept. 25 the Falangist Party called for the continuation of the general strike as a protest against the membership of the new Government. At a meeting of 32 deputies drawn from the National Liberal, Falangist, and National Bloc parties, held at M. Chamoun's country residence on Sept. 26, it was decided to form a united Opposition and to refuse the Government a vote of confidence. [The National Liberal Party was formed on Sept. 4 by a group of deputies supporting M. Chamoun, who assumed its leadership on relinquishing the presidency.]

Some progress was made in restoring order on Sept. 27, when the daytime curfew was lifted, the former rebels began dismantling the barricades in the Basta area of Beirut (which they had manned since May), and the Falangist leader, M. Pierre Gemayel, agreed that his followers would remove their own barricades with the Army's assistance. When troops arrived for this purpose on Sept. 28, however, the Falangists refused to carry out their leader's undertaking and opened fire ; a three-hour exchange of shots followed in which two civilians were killed. Following this incident, the situation in the capital again deteriorated seriously, and enforcement by the Falangists of the general strike gave rise to renewed fears of civil war. Three people were killed and 10 wounded in two incidents in Beirut on Oct. 3, when troops fired on riotous Falangist mobs, and 11 killed and about 50 injured in further clashes in Beirut and Tripoli on Oct. 6-7.

The U.S. Ambassador, Mr. McClintock, held a reception for Lebanese party leaders on Sept. 30 at which he informally put forward proposals for ending the crisis. These were that the Government should seek a vote of confidence from the Chamber as soon as possible ; that the Cabinet should be enlarged to include three or four supporters of the previous Government ; and that the number of deputies should later be increased from 66 to 88. M. Karami, who had refused Mr. McClintock's invitation, said on Oct. 1 that he would not enlarge his Cabinet, and the Ambassador's proposals were attacked in the pro-Government press as foreign interference in Lebanese internal affairs Mr. McClintock stated on Oct. 1 that he had intervened at M. Gemayel's request, with the approval of Mr. Dulles.

During the next two weeks President Chehab had a series of meetings with Government and Opposition leaders in an attempt to find a solution to the crisis. On Oct. 11 M. Gemayel was received by the President and also met M. Kemal Jumblatt (a leading Government supporter), who afterwards saw M. Karami and M. Salam. The meeting between M. Gemayel and M. Jumblatt, at which they were reported to have discussed the possible formation of a coalition government under M. Karami's leadership, was the first occasion on which Government and Opposition representatives had negotiated together directly, instead of through the President.

As a result of these discussions, and after further complicated negotiations, it was announced in the early hours of Oct. 15 that a coalition Cabinet had been formed consisting of two Government and two Opposition leaders. M. Rashid Karami retained the Premiership, while the other members of the Cabinet were M. Pierre Gemayel (the Falangist leader), M. Raymond Eddé (leader of the National Bloc), and M. Hussein Oweimi, a supporter of M. Karami. Two members of the new Cabinet (M. Karami and M. Oweimi) were Moslems, and two (M. Gemayel and M. Eddé) Christians. Simultaneously with the formation of the new Government the general strike ordered by the Falangists was called off, and for the first time the country began to return to normal after nearly six months of civil strife.

The new Government was given a unanimous vote of confidence in the Chamber of Deputies on Oct. 17, with 50 of the 66 members present.

M. Karami stressed the need for national unity as the Government's principal task and declared : " We are resolved to forget the past. The Government, which appreciates its responsibilities under the present circumstances, regards it as its primary duty to plant the seeds of national unity and to achieve co-operation and trust among all citizens. It is on this basis that we might call the present Government one of national salvation. We therefore seek your co-operation in preparing a favourable atmosphere to help restore confidence, security and calm . . . " After stating that there would be no major changes in the policy outlined by President Chehab in his inaugural address (see above), M. Karami declared : " The Government stresses its determination to preserve the sovereignty and to defend the independence of Lebanon so that she will remain for us all as she is now—a free and independent Arab State."

During the parliamentary session all the deputies, and the public in the galleries, observed a one-minute silence in memory of the 1,500 Lebanese who had lost their lives in the disturbances of the preceeding six months.

Despatches by foreign correspondents in Lebanon said that complete normality had returned to Beirut, where all public transport was running normally, practically all shops had reopened, and all the barricades had been removed.

Reports of U.N. Observation Group. - Expansion of Observer Corps.

In its second report, covering the period July 2-15 and released on July 31, the U. N. Observation Group in Lebanon rejected the Solh Government's allegations of Syrian " infiltration " and smuggling of arms. The report was signed by Señor Galo Plaza (Ecuador), Major-General Odd Bull (Norway) and Mr. Rajeshwar Dayal (India), the three members of the Observation Group.

The report stated that the Group had received 102 communications from the liaison committee set up by the Lebanese Government, 33 of which made allegations of infiltration. Although all of these had been investigated, " in no case was it possible to find explicit confirmation of specific allegations, and only in a few cases was the information obtained of such a nature as to require further action by the Group."

In reply to allegations by the Lebanese Government that U.N. observers were " not prepared to go out at night to investigate cases of possible infiltration," the report stated : " The Group has given careful consideration to the question of checking by means of night patrols possible infiltration routes ; but in view of the harassments suffered by its observers in such areas even by day, it reluctantly came to the conclusion that night patrols would involve a degree of risk to the observers which it could not accept. It was confirmed in this view by the fact that well-armed Lebanese forces have established no control along the routes in question . . . Further confirmation was provided subsequent to the period covered by

this report, when a lighted U.N. jeep proceeding by night under a previously concluded arrangement to a village near an infiltration route came under heavy fire and was hit several times . . . Intensive air patrolling has been carried out by day as well as by night, and the observations thus made have been closely checked against the result of ground patrolling and observation. All-night watches have been instituted at the out-stations and sub-stations, and occasionally observers have patrolled at night."

Summing up the situation, the report said that it was clear that infiltration of arms "cannot be on anything more than a limited scale and is largely confined to small arms and ammunition." It continued: "In conditions of civil conflict, when the frontier is practically open and unguarded throughout its length, some movement of this kind may well be expected. As regards the question of illegal infiltration of personnel, the nature of the frontier, the existence of traditional tribal and other bonds on both sides of it, and the free movement of produce in both directions, are among factors which must be taken into account in making an evaluation. It must, however, be said that in no case have U.N. observers, who have been vigilantly patrolling the Opposition-held areas and have frequently observed the armed bands there, been able to detect the presence of persons who have indubitably entered from across the border for the purpose of fighting. It must be emphasized that, from the observations made of the arms and organization obtaining in Opposition-held areas, the fighting strength of Opposition elements is not such as to be able successfully to cope with hostilities against a well-armed regular military force. There is no evidence of the existence of radio contact between the Opposition forces scattered over different parts of the country, nor of any co-ordinated military planning and control . . ."

The Group's third report, covering the period July 15 - Aug. 11, was published on Aug. 15. It stated that "while there may have been a limited importation of arms into some areas prior to the presidential election on July 31, any such movement has since markedly diminished."

The report said that the landing of U.S. forces on July 15 had produced a "sharp reaction" in the Opposition-held areas, causing difficulties and setbacks for the task of observation; nevertheless, the ground lost had been "steadily regained through the tact, patience, and perseverance of the military observers." "In the light of their observations," it continued, "the Group feels that such traffic as is crossing the frontier is related to the normal economic life of the territory, but as the frontier is open and unguarded the possibility of infiltration on a limited scale of arms and ammunition cannot be wholly excluded." In the area south of the main Beirut-Damascus road, the observers had reported having seen two mule caravans crossing from the direction of Syria on July 22 and 24, one of them accompanied by 30 armed men, and from other evidence the Group concluded that a caravan had passed through the area every night from July 15-28. Although these caravans had not been inspected, the report commented that "the movement of a certain amount of arms and ammunition may be presumed."

Continuing, the report stated that observation posts had been established at most of the "sensitive points" along the borders and in the immediately adjacent areas, and the process was being intensified as additional observers arrived. It added: "The presence of the U.N. observers moving around in their white jeeps from village to village is welcomed both by Government supporters and by Opposition elements. The independence and impartiality of the observers is universally recognized and appreciated, and they are regarded as the symbol of the U.N.'s presence in the area; they help to inspire feelings of calm and confidence in the areas patrolled by them. Sometimes local disputes and difficulties have been referred to them by different parties, which they have occasionally been instrumental in solving."

The Group's fourth report, covering the period Aug. 11-Sept. 20 and published on Oct. 1, said that the Group had "no convincing reports" of infiltration; that, on the contrary, it possessed "some detailed reports . . . that persons who had presumably entered Lebanon for illegal purposes have now left the country"; and that any infiltration which might still be occurring must be regarded as "insignificant."

In an interim report submitted on July 17, the Group had previously stated that it had completed the task of obtaining full freedom of access to all parts of the frontier.

Out of 113 observers, 14 were stationed at headquarters in Beirut, 22 at five posts in the Tripoli area, 47 at six posts in the Bekaa area, 10 at one post in south-eastern Lebanon, and 20 at three posts in the Saida area. The Group proposed to establish stations or permanent observation posts at 12 new points on or close to the frontier, including all important road and rail frontier crossings; for this purpose 96 observers would be required, raising the total strength of the U.N. force to about 200. The report said that it would greatly help in the extension of the observers' activities if they were assisted by a number of unarmed troops, to be used for regular patrolling of the frontier areas by foot or on mules. As aerial reconnaissance had proved "a most valuable adjunct to the Group's ground observation," the Group requested an adequate number of planes and personnel capable of providing continuous air patrols on all sections of the frontier, including planes with night photography capabilities. A total of 18 reconnaissance planes and four helicopters would be required, in addition to helicopters for communications purposes.

It was announced on Sept. 18 that the Group was employing at that date 217 ground observers and 68 air personnel, and that the number of observers would be further increased during the next few weeks. The aircraft at the Group's disposal had been given on Aug. 19 as 16 reconnaissance planes and eight helicopters.

On July 25 Dr. Hammarskjold had set up an advisory committee to assist him in strengthening the Observation Group, recruited from the same countries which made up the U.N. Expeditionary Force in Egypt. The members of the new body were Senhor Freitas Valle (Brazil), Mr. Charles Ritchie (Canada), Sir Claude Corea (Ceylon), Dr. Alfonso Araujo (Colombia), Mr. Arthur Lall (India), Hr. Hans Engen (Norway) and Prince Aly Khan (Pakistan).

Agreement on Evacuation of U.S. Forces.

Strong reinforcements for the U.S. forces in Lebanon landed in Beirut on Aug. 1-5, including 5,000 men and 75 tanks. The strength of the U.S. forces in Lebanon was thereby increased to 14,300 men, including four Marine battalions, an airborne group, a tank regiment, and signals, transport, medical, and other ancillary services. Vice-Admiral Holloway denied that the landings had any political or military significance, and stated that "everything coming in is part of the initial movement."

On Aug. 13 (the date of the opening of the U.N. General Assembly's debate on the Middle East) Vice-Admiral Holloway announced that, after discussions with President Chamoun and General Chehab, he "agreed with the Lebanese authorities that there has been a material improvement in the internal and external situation of Lebanon"; in consequence, a Marine battalion of 1,700 men would re-embark on the following day. The battalion was not completely withdrawn, however, but was transferred to the Sixth Fleet (which remained concentrated off the Lebanese coast) as a "floating reserve." Two more Marine battalions, numbering about 2,100 men, embarked for the U.S.A. on Sept. 14-16; the last Marine battalion, about 1,600 strong, began embarking on Sept. 28; and 1,000 support troops left for Germany on Oct. 5.

Agreement on a time-table for the evacuation of the remaining U. S. forces was reached on Sept. 27 at a meeting between M. Karami, Mr. McClintock, and the U.S. military authorities, and on Oct. 8 the State Department announced that "barring unforeseen developments" the evacuation would be completed by the end of the month. The statement added: "Steps taken with respect to the situation have led to a substantial improvement in the international aspects of Lebanese security. The current unrest appears to have essentially domestic origins. In view of the progress made towards more stable international conditions in the area, it has been concluded that the U.S. forces can now be totally withdrawn."—(Times - Daily Telegraph - Manchester Guardian - Le Monde, Paris - New York Times - New York Herald Tribune - U.N. Information Centre, London)

A. UNITED KINGDOM. — Press. - "Liverpool Evening Express" ceases Publication. - Merger of "John Bull" and "Illustrated."

The *Liverpool Evening Express* (founded in 1870) ceased publication on Oct. 13 owing to heavy and increasing losses for some years which made it impossible to continue circulation. It was merged with the *Liverpool Echo* (founded in 1879), which appeared from Oct. 13 under the name of the *Liverpool Echo and Evening Express*. The proprietors of the *Echo* (and also of the defunct *Evening Express*) are C. Tinling & Co. Ltd., all shares in which have been owned by the Liverpool Daily Post and Echo Ltd. since 1925.

The weekly magazines *John Bull* and *Illustrated*, both owned by Odhams Press, were merged on Oct. 4 under the title *John Bull and Illustrated*.—(Times - Manchester Guardian)

(Prev. rep. 15934 A.)

B. DENMARK. — New Foreign Minister.

Hr. H. C. Hansen, the Danish Prime Minister and Foreign Minister, relinquished the Foreign Affairs portfolio on Oct. 9 to Hr. Jens Otto Krag, who concurrently retained his existing portfolio as Minister of Foreign Economic Affairs. In a previous statement (Oct. 5) announcing his wish to resign as Foreign Minister, Hr. Hansen stated that he was entering hospital for a throat operation and that Hr. Viggo Kampmann (the Finance Minister) had been appointed acting Premier during his (Hr. Hansen's) absence. It was stated in the Danish Press that the Cabinet change would involve no alteration in Denmark's foreign policy.—(Berlingske Tidende, Copenhagen)

(Prev. rep. 15570 A.)

A. NUCLEAR TESTS. — Soviet Union resumes Nuclear Weapon Tests. - British and American Tests.

The resumption of nuclear weapon tests by the Soviet Union was announced in Moscow on Oct. 2. The Tass Agency said that this action had been taken because the Western Powers had "not complied with the repeated demand of the Soviet Government to cease tests of nuclear weapons."

After accusing the United States and Britain of raising "fresh obstacles" to an international agreement for the suspension of nuclear weapon tests, and alleging that the U.S.A. had carried out "at least 40 tests since March 31" (the date on which the U.S.S.R. announced the unilateral suspension of tests), Tass asserted that the Western Powers had used the Soviet renunciation of tests to obtain "a one-sided military advantage" for themselves. Whilst justifying the resumption of Soviet tests on the ground of safeguarding the security of the U.S.S.R., Tass added that the Soviet Government would "continue its struggle for the cessation of atomic and hydrogen weapon tests for all time."

The detection of two nuclear weapon tests in the U.S.S.R. had previously been announced on Sept. 30 by the U.S. Atomic Energy Commission; both tests were described as having taken place north of the Arctic Circle and as being of "moderate to high yields." Six more Soviet tests of the same type and in the same area were reported by the A.E.C. between Oct. 2 and Oct. 15.

At a press conference at U.N. Headquarters on Oct. 7, M. Gromyko (the Soviet Foreign Minister) reiterated the allegation that his Government had been "forced" to resume nuclear weapon tests because of the "inequality" between the number of tests carried out by the Western Powers and the U.S.S.R. respectively; he nevertheless said that his Government would attend the Geneva meeting scheduled to begin on Oct. 31 (see page 16406).

M. Gromyko (who was attending the 13th session of the U.N. General Assembly) maintained that the Western Powers' "refusal" to respond to the U.S.S.R.'s gesture in suspending its own weapon tests justified the Soviet Union in resuming such tests in the interests of its own security. He added that the U.S.S.R had "all grounds to discontinue its tests only after it conducts the same number of tests as was held by the United States and Britain, taken together as allies, after the cessation of Soviet nuclear tests on March 31 this year." Asked whether, if the U.S.A. and Britain suspended their tests, the Soviet Union would continue with its own tests until it had "caught up" with the number of Anglo-American tests, M. Gromyko replied that this was "a hypothetical case which does not exist at the present time." In reply to a further question, he said that any nuclear tests which might be carried out by France would have to be added to the combined British and U.S. total.

In connexion with M. Gromyko's statement, the U.S. State Department and the British Foreign Office issued statements on Oct. 7-8 saying that the policy of the two Governments on nuclear tests remained unchanged, viz. "to begin negotiations [at Geneva] on Oct. 31 and to suspend tests for one year from the day these negotiations begin, provided always that the Soviet Union does not conduct tests during that period."

The Soviet Government had previously sent Notes to London and Washington on Oct. 1 proposing that the forthcoming Geneva talks on the suspension of nuclear tests should be held at Foreign Ministers' level.

American Nuclear Tests.

The U.S. Energy Commission announced on Sept. 8 that the previously-announced summer series of American nuclear tests had been successfully concluded and had "contributed to further development of improved weapons for the defence of the United States and the free world." It was stated that "at least 14 nuclear shots" had been fired at Eniwetok atoll since the beginning of the series on April 28, in addition to two rocket-borne nuclear warheads exploded high above Johnston Island on Aug. 1 and Aug. 12.

No details were given of the tests carried out at Eniwetok or of types of weapons detonated, beyond brief statements issued from time to time saying that test explosions had been carried out successfully; some of these explosions were obviously of great power, as they were recorded at Australian and Japanese meteorological stations thousands of miles distant. At a press conference on April 30, President Eisenhower had stated that 40 per cent of the Pacific tests would be devoted to the development of "clean" weapons—i.e. weapons in which the radioactive fall-out was minimal or negligible.

In each of the two tests at Johnston Island, an atomic weapon mounted in a missile was detonated at a great height; on both occasions a dazzling flash was clearly visible in Hawaii, over 700 miles distant. No details were given as to the type of missile used or the height at which it was detonated, but it was conjectured in the U.S. Press that a *Redstone* missile had been employed—a development of the German V-2 rocket weapon—and that the tests were of an "anti-missile missile" nature. All ships and aircraft were warned to keep clear of an area 520 miles in radius from Johnston Island during the period of the experiments. The tests were officially described as "successful," the A.E.C. adding that no personnel had been injured and that no radioactive fall-out had been detected in the Johnston Island area.

The Atomic Energy Commission announced on Sept. 10 that ten further "low-shot" tests would be held at the Nevada proving grounds, all of which would be concluded by Oct. 31—the date on which the Geneva talks were scheduled to begin. Nine of these tests—all of relatively low yields—took place between Sept. 10 and Oct. 18, of which two were underground detonations.

British Nuclear Tests.

Four British nuclear tests were carried out at Christmas Island on Aug. 22, Sept. 2, Sept. 11 and Sept. 24; in the second and third of these tests high-yield devices in the megaton range (i.e. of the hydrogen-bomb type) were detonated at a high altitude, while the first and last tests were of low-yield devices suspended from balloons. An earlier successful high-altitude test in the megaton range had been carried out by a British task force in the Central Pacific on April 28. (Times - Daily Telegraph - Manchester Guardian - New York Times - New York Herald Tribune - Soviet Embassy Press Department, London) **(Prev. rep. Geneva Conference of Experts, 16406 A; Soviet Suspension of Tests, 16101 A; U.S., British and Soviet Tests, 16012 A.)**

B. WESTERN GERMANY. — Mr. Macmillan's Visit.

Mr. Macmillan visited Bonn on Oct. 8-9 for informal discussions with Dr. Adenauer, in which Dr. von Brentano (the Federal Foreign Minister) and Mr. Ormsby-Gore (Minister of State, Foreign Office) also took part. [The Foreign Secretary, Mr. Selwyn Lloyd, was prevented through illness from accompanying the Prime Minister.]

A joint statement said that the purpose of Mr. Macmillan's visit had been to enable him and Dr. Adenauer to maintain regular personal contacts. Their "friendly" conversations had been "especially valuable" in view of the many recent developments in the Middle East, the Far East, and elsewhere. They had agreed on the necessity for close co-operation in the maintenance of peace, and on the importance of losing no opportunity for reducing East-West tensions by all available means. They looked forward to negotiations on the suspension of nuclear weapons tests under effective control.

Dr. Adenauer (the statement went on) had expressed anxiety about developments in Eastern Germany, and Mr. Macmillan had confirmed H.M. Government's readiness to enter into discussions at any time and in any appropriate forum on the basis of proposals genuinely designed to ensure German reunification in freedom. Both the Chancellor and Mr. Macmillan regarded it as essential, in the interests of European unity, to bring the negotiations for a Free Trade Area to an early and satisfactory conclusion. Finally, they had decided to continue their personal contacts by further meetings.

In a press statement before leaving Bonn, Mr. Macmillan said that Anglo-German friendship was of immense value to Europe and the world; that it was essential to forget the "deep and bitter conflicts of the past"; and that it was vital for European unity that agreement in principle should be reached on the Free Trade Area by the end of the year.

Mr. Macmillan was received by President Heuss during his visit to Bonn.—(Times - Frankfurter Allgemeine Zeitung) **(Prev. rep. 16242 A.)**

C. NEW ZEALAND - JAPAN. — Legations in Tokio and Wellington raised to Embassy Status.

The N.Z. Prime Minister (Mr. Nash) announced on May 12 that New Zealand and Japan had agreed to raise their respective Legations in Tokio and Wellington to the status of embassies, in view of the good relations now existing between the two countries and the importance of maintaining mutual representation at the highest level. The New Zealand Minister in Tokio (Mr. J. S. Reid) and the Japanese Minister in Wellington (Mr. H. Shimadzu) would accordingly have ambassadorial status.—(N.Z. External Affairs Department, Wellington) **(Prev. rep. 16396 A.)**

D. FRANCE - ITALY. — Co-operation between Renault and Alfa Romeo Motor Companies.

The French State-owned Renault company announced on Oct. 17 that it had signed a technical and commercial agreement with the Italian Alfa Romeo company whereby Alfa Romeo would manufacture certain types of Renault cars under licence for sale in Italy, whilst Renault would make certain Alfa Romeo cars in France and become agents for all the Italian company's models. The agreement was made within the framework of the European Common Market, which begins to function on Jan. 1, 1959.—(Le Monde - Giornale d'Italia) **(Prev. rep. 14175 C.)**

OCTOBER 18—25, 1958

A. BRITISH COMMONWEALTH. — Montreal Trade and Economic Conference.

The Commonwealth Trade and Economic Conference, the convening of which had been agreed upon at the Quebec conference of Commonwealth Finance Ministers [see 15796 A] was held in Montreal from Sept. 15-26.

The leaders of the delegations were : *Australia*—Mr. John McEwen, Deputy Prime Minister and Minister for Trade. *Canada*—Mr. John G. Diefenbaker, Prime Minister ; Mr. Donald Fleming, Finance Minister ; and Mr. Gordon Churchill, Trade Minister. *Ceylon*—Mr. S. de Zoysa, Finance Minister. *East Africa*—Mr. E. A. Vasey, Kenya Finance Minister, representing Kenya, Uganda, Tanganyika, and Zanzibar. *Ghana*—Mr. K. A. Gbedemah, Finance Minister. *India*—Mr. Morarji Desai, Finance Minister. *Malaya*—Sir Henry Hawshik Lee, Finance Minister. *New Zealand*—Mr. A. H. Nordmeyer, Finance Minister. *Nigeria*—Chief Okotie-Eboh, Finance Minister. *Pakistan*—Mr. Amjad Ali, Finance Minister, and Sardar Abdur Rashid, Minister for Commerce and Industries. *Rhodesia and Nyasaland Federation*—Mr. Donald Macintyre, Finance Minister. *Sierra Leone*—Mr. Mustapha, Finance Minister. *South Africa*—Dr. Van Rhijn, Minister of Economic Affairs. *United Kingdom*—Mr. Heathcoat Amory, Chancellor of the Exchequer ; Lord Home, Secretary of State for Commonwealth Relations ; Sir David Eccles, President of the Board of Trade ; Mr. Reginald Maudling, Paymaster-General in charge of negotiations for the European Free Trade Area ; and Lord Perth, Minister of State for Colonial Affairs. *West Indies*—Dr. Lacorbimère, Federal Deputy Prime Minister and Minister of Trade and Industries.

Mr. Fleming, who was elected chairman of the conference, announced on Sept. 16 the following agenda :

(1) The significance for Commonwealth countries of the changes in world trade.

(2) Sterling area prospects.

(3) Progress towards the common objective of freer trade and payments.

(4) Economic and trade problems in regard to agriculture and other primary production.

(5) Measures to expand trade between Commonwealth countries.

(6) The progress and direction of economic expansion in the less developed countries of the Commonwealth, and the sources of capital and technical assistance that might aid in their further development.

(7) Prospects and implications, especially for Commonwealth countries, of a European Economic Community and the proposed Free Trade Area.

(8) Arrangements for continuing Commonwealth consultation on economic matters.

All the discussions were held at plenary sessions, *ad hoc* working groups being established to deal with specific issues.

During the Conference's discussions, particular concern was expressed by a number of delegates—including **Mr. McEwen** (Australia), **Mr. Fleming** (Canada), **Sir Henry Lee** (Malaya) and **Mr. Heathcoat Amory** (United Kingdom)—about the instability of the prices of primary commodities and its effect on the economy of producer-countries depending largely on revenue from the export of those commodities. Another subject of concern was raised by **Mr. Nordmeyer** (New Zealand), who strongly criticized the policy adopted "by certain countries, including Commonwealth countries," of subsidizing farm products to an extent which caused them to dump such products abroad, thereby severely damaging the traditional export trade of such countries as New Zealand.

On the other hand, the Canadian policy of agricultural protectionism was defended by **Mr. Diefenbaker,** who pointed out that "in most if not all countries" special safeguarding measures for agriculture had been "deemed imperative" and that "we delude ourselves if we regard this as a passing phase." Canada herself had suffered for many years from the consequences of efforts by other countries to foster their agriculture, until she had been forced to take counter-action. Mr. Diefenbaker suggested that all countries which were substantial producers or importers of food should jointly undertake a systematic review of the conditions of world trade in agricultural products and the rules under which such trade could be carried out "with harmony and good sense." Such a review, for which the machinery of GATT could be used, might result in the settting up of an International Food Bank.

The need to "make war on poverty" in the under-developed countries was stressed with particular emphasis by **Mr. Desai,** who urged that the capital needs of these countries should have priority, and suggested that development problems be tackled "within the Commonwealth family in the same manner in which they are handled within the close-knit family of the national State." Formerly, "glaring disparities" of income between individuals and areas within States had been accepted "almost as a law of nature," but this was no longer acceptable to the conscience of the civilized world, and the same principle should apply in the relations between Commonwealth countries "and indeed over the entire world." Mr. Desai said that the basic value of the Commonwealth was "our belief in the ideal of freedom of the human spirit," but that the human spirit "had to be alive before it could be free." If economic conditions were to be such as to destroy the human spirit, he feared that there would increasingly be a turning-away from all the values which gave meaning to a democratic Commonwealth. He asked the Conference to adopt the principle—previously enunciated by Sir David Eccles—that the more advanced industrial nations, including Canada and the U.S.A., should open their doors freely to the manufactured products of economically backward countries, thus enabling the latter to increase their capital resources for development. [Sir David's appeal was made at a public luncheon, during which he pointed out that Britain was importing large quantities of cotton cloth from India and Hong Kong despite the problems thereby raised for the British textile industry].

Announcements on Economic, Educational, and Telecommunications Co-operation between Commonwealth Countries. - Proposed Round-the-World Cable Link.

A number of important announcements were made by individual member-countries during the conference, in addition to the decisions taken by the conference as a whole. Fuller details of these announcements are given below.

Wide Relaxation of U.K. Dollar Import Restrictions.

Sir David Eccles announced on Sept 17 that restrictions on dollar imports into Britain would be drastically reduced with immediate effect, including the removal of nearly all controls on imports of industrial, agricultural, and office machinery and the complete freeing from control of canned salmon and newsprint imports. He also announced the steps envisaged by the U.K. Government for the further gradual abolition of the remaining restrictions on dollar imports. Sir David's statement was as follows :

"Our policy in this matter of import restrictions has been consistent. It is true that in view of our balance-of-payments position we have had to maintain some restrictions on imports, mainly from the dollar area. But, as the Chancellor of the Exchequer said in his opening statement, we have moved forward steadily towards the goals of non-discrimination and convertibility, and it remains our firm policy to remove discrimination entirely as our circumstances permit.

"Our record will speak for itself. In the three years immediately following 1952 we freed from import control the major raw materials and basic foodstuffs. In 1956 we removed controls on paper-pulp and board and made a very substantial increase in the quota for newsprint. By 1957, 62 per cent of our dollar imports were free of all restrictions.

"A year ago, and notwithstanding our difficulties at that time, we freed almost all remaining raw materials. Earlier this year we gave a substantially increased quota for canned salmon, abolished the discrimination against the dollar area in our import licensing arrangements for apples, and gave extended quotas for other dollar fruit. In July we made a further major step forward by removing completely import controls on all chemicals.

"A decision on the pace at which the United Kingdom can move in this field must remain our responsibility, and what we are able to do must depend on the circumstances from time to time, some of which are not under our control. It will be agreed that when a relaxation is made we must feel confident of being able to maintain it. Therefore we cannot enter into any fixed timetable.

"But I am glad to say that we now see our way to taking a further significant step forward. We have decided to take action under four heads :

(*a*) We propose to make almost a clean sweep of the controls on dollar imports of industrial, agricultural, and office machinery. Only a limited range of comparatively specialized machinery will remain subject to control.

(*b*) Canned salmon will be wholly freed from import control with the exception of salmon from the Soviet bloc.

(*c*) We shall formally free newsprint from control.

(*d*) Colonial Governments are being invited to make relaxations of their restrictions on a wide range of dollar goods.

"This we are doing at once, and then we shall have reached the stage when almost all materials, basic foodstuffs, and tools of trade will be free.

"The next move will be to make a start in freeing our imports of consumer goods and the remaining foodstuffs. Exactly what we shall be able to do, and when, will depend on certain well-known conditions. I have in mind the need to be sure both that world trade is expanding and that we are free from inflation at home. But, broadly speaking, this is what we would propose to do. All being well, we hope to make a start next year. First, we would remove the controls on as wide a range of consumer goods and foodstuffs as we could. Secondly, we should establish or increase quotas for items where in our judgment the cost of total liberalization might be greater than we could afford at that time. The next stage would be

progressively to increase these quotas until the items were completely free. Thirdly, there would remain a limited number of items presenting special difficulties Each of these would be considered over a period of time on its merits."

The British Government's decision was warmly welcomed by Mr. Fleming and the other Canadian delegates to the conference.

In London, it was pointed out by the Board of Trade that hitherto there had been no quotas on agricultural, industrial, and office machinery imported from dollar countries, and that anyone wishing to buy such machinery had to show that he needed it and could not obtain it from the sterling area or from Western Europe; only if he could do so was he granted an import licence and the necessary exchange facilities. There were no controls on chemicals, animal foodstuffs, and basic manufacturing materials, but consumer goods were all on quotas—many of which were small, and were only imported in token quantities. The freeing of newsprint imports was unlikely to have any substantial effect, as supply and demand were roughly in balance and the amount used was mainly controlled by the price.

Canadian Tariff Pledges to Britain, Australia, and New Zealand.

Mr. Fleming announced on Sept. 23 (*a*) that Canada would be prepared "to bind, which means not to increase," the existing preferential rates of duty for an important list of U.K products imported into Canada; (*b*) that, in respect of a further substantial list of products imported from the U.K., Canada proposed to "bind" the existing preferential rates against any increase as recently negotiated under the General Agreement on Tariffs and Trade. The total value of imports from Britain affected by the Canadian concessions amounted to some $150,000,000 (about £53,570,000) annually.

In the first category free entry would accordingly be assured in respect of cars, lorries, and buses of all kinds, together with spare parts; aircraft, aero-engines and parts, diesel engines and parts; textile machinery; printing presses; tractors and parts; china tableware; plate-glass; wire for wire rope; books; biscuits; and a number of other items. Products in the second category would include the whole range of primary iron and steel products, and also all pipes, tubes, and fittings.

In announcing the Canadian decision, Mr. Fleming referred to the elimination of dollar import discriminations by the U.K. He added: "In the same spirit of helping one another wherever we can the Canadian Government has decided to respond in a positive way without trade treaty obligations, including the 'no new preference' rule. We are taking this action in the confident expectation that U.K. exporters, who are thus assured of continued favourable access to the Canadian market, will seek out new opportunities to expand their sales in this growing market."

Mr. Fleming also announced that Canada had reached "understandings" with Australia to review existing tariff agreements touching on Imperial tariff preferences, and that Australia and New Zealand had received guarantees that Canada would not increase preferential duties on lamb and mutton imports from those countries.

[The existing Canadian duty on Australian and N.Z. lamb and mutton is ¼ cent per lb., compared with 4 cents per lb. from other Commonwealth suppliers and 6 cents per lb. from countries outside the Commonwealth. The special rate for Australia and New Zealand has been operating for 20 years. Australian exports of lamb and mutton to Canada amount to about £750,000 a year, and New Zealand exports to about £1,330,000.]

Commonwealth Economic Assistance Loans by Britain.

Mr. Heathcoat Amory announced on Sept. 22 the introduction by the U.K. Government of a new system of Commonwealth economic assistance loans on preferential terms. Under this, Britain was proposing to offer to independent Commonwealth countries credits under the Export Credit Guarantees Act at the rate of interest at which the British Government itself borrowed, plus a management charge of ½ per cent. He added: "This is a major departure of policy for us. We have already made a start, and the scale of this operation may be judged from the fact that we have already offered credits in this form to a total of more than $150,000,000. For the Colonies we are proposing to introduce legislation to provide Exchequer loans at the same rate, to supplement what they can raise on the market."

Speaking at a luncheon later the same day, the Chancellor of the Exchequer said that Britain's total contribution to economic development in the Commonwealth had averaged nearly £200,000,000 annually in recent years, or nearly 1¼ per cent of the U.K.'s gross national income. He added: "We mean to keep this up and do better still if we can, but we must always be quite sure that we do not accept commitments beyond the limits of our resources."

Dealing with the question of whether there were other ways of helping to stimulate the flow of capital to under-developed countries in the Commonwealth, Mr. Heathcoat Amory declared: "Thus far the main source of such capital has, of course, been the United Kingdom. We should be glad if other Commonwealth Governments could participate too, even those which are net capital-importing countries. In addition to what they may decide to do individually, we suggest that they might be willing (either through their central banks or directly through their Governments) to join in the work of our Commonwealth Development Finance Company, a privately-run organization which assembles development capital from banks and other sources, and which would like to expand its work in co-operation with individual Commonwealth development corporations overseas, and with the International Bank. We hope there may be some results from this approach."

There were three methods by which capital could flow abroad, the Chancellor continued. The first was to provide at home the right conditions for active private enterprise, but if British businessmen were to invest abroad the receiving countries must give assurances that such investment would not be hampered. Direct private investment was undoubtedly the most important way of providing for oversea development. The second method was mobilization through the London market. In the post-war period only Commonwealth and Colonial Governments had hitherto been allowed to come to the London market for loans, but not subordinate authorities such as development boards, etc. In future Britain would also allow these subordinate authorities in under-developed countries to use this facility where the need was urgent. The third method was to try to get money for establishing basic services (railways, roads, and power schemes) where private capital could not be attracted. The International Bank had done a great deal in this field, and Britain hoped that if the Bank's resources were expanded "they would be able to do much more." The British Government felt, however, that apart from International Bank facilities it should do something more, and for this reason it had initiated the system of Commonwealth economic assistance loans.

Speaking of Britain's financial recovery during the past year, the Chancellor said that a "sound basis" had now been reached from which it was possible to work outwards and help the rest of the Commonwealth; the first way to help was by keeping sterling strong, which would always remain Britain's "Number One priority."

Increased Canadian Aid under Colombo Plan. – Higher Canadian Contributions to World Bank and International Monetary Fund.

Mr. Fleming announced on Sept 22 the following Canadian decisions to step up the flow of financial aid to under-developed Commonwealth countries and to help world development in general: (1) The doubling of Canada's subscription to the World Bank, involving an additional commitment of $325,000,000, and a 50 per cent increase of her quota in the International Monetary Fund, involving an additional payment of $150,000,000. (2) An increase of nearly 50 per cent in Canadian aid under the Colombo Plan, by raising her annual appropriation over a three-year period from $35,000,000 (the present level) to $50,000,000 a year. (3) A grant of $25,000,000 a year in free foodstuffs to Asian Commonwealth countries such as India, Pakistan, and Ceylon. (4) Special arrangements for contributions to African Commonwealth countries for their development, involving mainly technical aid at a cost of $500,000. (5) Canada would continue her contribution to the Colombo Plan technical assistance programme, and contribute to the new U.N. Special Fund to assist under-developed countries. (6) Canada would also be willing to join in a Commonwealth Bank, if formed, and would undertake further studies of this project.

Commonwealth Educational Exchange Programme.

Following a proposal by Mr. Diefenbaker that the conference should consider the establishment of a broad and reciprocal educational exchange programme of 1,000 scholarships and teaching fellowships, in order to strengthen the intellectual resources of the countries concerned, Lord Home announced on Sept. 19 that Britain would be willing to provide one-half of these scholarships; in view, however, of her great experience in educational matters in the under-developed countries, he felt that the emphasis should be more on teacher training and on technical education, rather than on facilities for higher education.

Illustrating the U.K. effort to help technical advancement in the under-developed Commonwealth countries and colonies, Lord Home pointed out that between 10 and 12 per cent of all places at U.K. technical colleges and universities were occupied by overseas students, two-thirds of whom came from the Commonwealth. At the Imperial College of Science, for example, the percentage of oversea students was 38, while at the post-graduate medical colleges it was 60. The current recurring cost to U.K. universities and other colleges was £41,000,000, three-quarters of which came from public funds.

Mr. McEwen announced that the Australian Government had decided to make available a further 150 places in Australian universities for Asian and other Commonwealth students. These places would be paid for by Government grants, in addition to existing commitments and regardless of the outcome of proposals for new Commonwealth scholarships and fellowships.

Mr. Fleming announced that Canada would be prepared to underwrite 25 per cent of the new educational exchange programme, to a limit of $1,000,000 a year. Dr. Sidney Smith (Canadian Minister for External Affairs) had previously announced that Canada would be prepared to take 100 students annually over and above those technical students included under such schemes as the Colombo Plan.

Lord Home suggested that a joint study group should be set up to investigate methods of improving teacher and technical training within the Commonwealth; he also urged that a Commonwealth conference on education should be held at an early date, possibly in London.

Canadian Economic Aid for West Indies.

Mr. Diefenbaker announced on Sept 23 a five-year programme of Canadian aid to the West Indies Federation totalling $10,000,000.

Mr. Diefenbaker said that the programme was based on a proposal which he had made on Sept 16 to Sir Grantley Adams (Prime Minister of the West Indies Federation), and which had been accepted by Sir Grantley on Sept. 19. It would include the provision of a sister-ship to the one which Canada had already agreed to provide for inter-island trade [see 16112 D]. The general principles of the programme would be worked out by Canadian representatives in Port of Spain.

Round-the-World Commonwealth Cable Link.

A plan for a round-the-world telephone cable was accepted in principle by the conference on Sept. 24. The scheme—which had first been suggested by Mr. Fleming at the Commonwealth Finance Ministers' Conference, and had been drawn up at a meeting of the Commonwealth Telecommunications Board in London last June—was unanimously approved. Lord Home announced that a substantial contribution could be expected from the U.K., provided other Commonwealth countries met a fair share of the cost.

At present there is one transatlantic telephone cable in operation, owned jointly by Canada, the U.S.A., and Britain [see 15121 D]. A second circuit is being built for completion in 1961, to be called *Cantat*; it will be jointly owned by Canada and Britain [see 15500 B].

The world circuit envisaged will use the *Cantat* cable to British Columbia. From there it will run to Honolulu (where it will connect with the U.S. cable), then on to Fanning Island (Central Pacific) and thence to New Zealand and Australia. From Australia it will run to Singapore, Chittagong (East Pakistan), Colombo, Karachi, Bombay, round the coast of Africa, and thence to Britain—a total distance of about 30,000 miles. All the submarine co-axial cable will be laid by the British cable-laying ship *Monarch* and will be of British design, with two-way repeaters.

The G.P.O. in London stated on Sept. 23 that such a world circuit would provide at least 60 high quality channels for two-way telephone conversations. It would also allow the direct exchange of radio programmes, and could yield a large number of telegraph circuits if some of the telephone channels were sacrificed.

The total cost of the venture, according to Mr. Fleming's estimate, would be £88,000,000; it was estimated that it would take ten years to complete.

Creation of Oversea Research Council.

Lord Home announced on Sept. 24 that it had been decided to establish an Oversea Research Council to help Commonwealth countries in scientific research. The British research councils—the Department of Scientific and Industrial Research, the Medical Research Council, and the Agricultural Research Council—were willing to provide advice and assistance, and the new Council would provide a central agency to which Commonwealth Governments and research institutes could refer for advice and information.

Communiqué of the Montreal Conference.

The results of the conference were summarized in the following communiqué issued in Montreal:

Trade. "The conference reaffirmed the common objective of freer trade and payments. It agreed that dollar discrimination should be progressively reduced and ended as soon as possible. The United Kingdom removed import restrictions on canned salmon, newsprint, and most machinery; this means that import restrictions have now been removed for almost all raw materials, basic foodstuffs, and industrial machinery. The U.K. also invited Colonial governments to relax restrictions on a wide range of dollar imports. It announced its intention, all being well, to make a start next year on the removal of all remaining restrictions. In recent weeks Australia has relaxed dollar restrictions on a further 10 per cent of its total imports.

"The conference agreed on the great value of the existing system of preferences and the importance of maintaining it. The United Kingdom confirmed its intention to maintain free and unrestricted entry for nearly all Commonwealth goods as an important part of the preferential system. Canada undertook to bind against increase under the General Agreements on Tariffs and Trade the British preferential rates of duty for an important list of products of special interest to the United Kingdom. Many of these items now enter Canada duty free. Canada also undertook to bind against increase the special low rate of duty on mutton and lamb accorded to New Zealand and Australia. The following trade agreements are to be reviewed: Canada-Australia; Canada-West Indies; Australia-New Zealand. New Zealand and the United Kingdom are also reviewing their trade agreement.

"The conference agreed that examination should take place, under the relevant anti-dumping legislation, of cases where it is alleged that dumped or subsidized goods are damaging the interests of Commonwealth suppliers. The conference agreed that full use should be made of trade missions, trade fairs, and other promotional activities for the expansion of intra-Commonwealth trade.

"The conference emphasized the need that a European Common Market and European Free Trade Area should be outward-looking in the interests of an expanding world trade and world economy.

"Commonwealth countries agreed that, subject to the provisions of international agreements, they should endeavour as soon as possible to remove discrimination in trade in the form of quantitative restrictions between themselves and refrain from introducing measures of discrimination between Commonwealth sources of supply unless this is necessary for balance-of-payments reasons. The conference recognized how important it is that obstacles should not be placed in the way of the export of manufactured foods of the under-developed members of the Commonwealth, and agreed that Commonwealth Governments will give full weight to this consideration whenever decisions are necessary concerning the terms of access of such goods to their markets.

"Views were exchanged on the various aspects of the new situation created by the more active participation of a number of the Sino-Soviet group of countries in world markets.

Commodity Problems and Agriculture. "The conference recognized the serious problems caused by the prevalence of wide fluctuations in commodity prices and the need for remedial action. To this end, Commonwealth countries agreed to participate in a commodity by commodity examination of the situation. It was proposed that an international study group should be established without delay to examine the current trade problems relating to lead and zinc. The conference expressed concern that the International Tin Agreement should survive and succeed, and agreed that Commonwealth countries should consult together, as necessary, about any appropriate measures to strengthen it. The Canadian and Australian Governments were pleased to note the intention of the United Kingdom to participate in the preparatory discussions for a new International Wheat Agreement.

"The conference agreed on the need for measures to mitigate the adverse effects of protection afforded to basic agricultural commodities and minerals. It agreed that care has to be taken in the disposal of surpluses on world markets at non-commercial terms so as not to cause harm to the interests of traditional suppliers. Non-commercial disposal can help to improve the living standards of the less-developed countries. However, such transactions call for adequate consultations so that the interests of all parties may be safeguarded as much as possible.

Finance. "The conference recognized the vital role of sterling in financing the flow of world trade, and that it was essential to the stability and progress of the whole world trading community that sterling remained strong. It remained the agreed objective that sterling should be made convertible as soon as the necessary conditions had been achieved.

"Agreement was reached on the desirability of expanding the resources of the International Monetary Fund and the International Bank for Reconstruction and Development. The conference welcomed the initiative of President Eisenhower in this regard.

"The conference discussed the possibility of establishing a new Commonwealth financial institution and agreed that further studies should be undertaken to consider methods of mobilizing resources for Commonwealth development.

Development. "The conference stressed the great importance of more rapid economic progress in the less-developed countries. All countries undertook to co-operate in this urgent task. This would require more capital, both public and private, more technical assistance, better opportunities for education, and increased opportunities for trade.

"The United Kingdom announced its intention to make Commonwealth assistance loans from Exchequer funds. The loans to independent Commonwealth countries will be made under the Export Credit Guarantees Act and those to Colonial territories under the Colonial Development and Welfare Acts. Offers of Commonwealth assistance loans already made total over £50,000,000.

"The conference favoured an expansion of the resources and activities of the Commonwealth Development Finance Company, and a number of delegations expressed the willingness of their governments to contribute to the capital of the company.

"The value of the Colombo Plan in promoting economic development was recognized by all. Canada announced an increase from $35,000,000 to $50,000,000 in its annual contribution to the Colombo Plan over the next 3 years. For the Commonwealth areas in Africa, Canada stated it would provide an initial sum of $500,000 for technical assistance. In addition, Canada indicated that it will continue to provide substantial sums to less-developed countries in the form of loans and grants for Canadian wheat and flour. The

conference noted Canada's announcement of a $10,000,000 programme of assistance to the West Indies over the next 5 years, including the provision of two ships for inter-island service.

"The conference agreed that all possible steps should be taken to encourage participation by private capital in the economic growth of under-developed countries.

Education. "The conference agreed that expansion of education and training within the Commonwealth is an essential condition of economic development. It was agreed in principle that a new scheme —additional to existing programmes—of annual awards of scholarships and fellowships would be established. Under this scheme 1,000 Commonwealth scholars and fellows will be studying in other Commonwealth countries at any one time. The United Kingdom undertook to assume responsibility for half the programme and Canada assumed responsibility for a further 25 per cent. The details of this scheme will be worked out at a special Commonwealth educational conference to be held early next year in London, which will also consider what might be done to expand and improve mutual assistance in this field between Commonwealth countries, with special reference to the supply and training of teachers.

Australia announced an increase of 150 in the number of places it is making available for education and training under the Colombo Plan.

Telecommunications. "All countries recognized the importance of reliable communications in strengthening the Commonwealth. It was agreed in principle to construct a Commonwealth co-axial cable which would provide the first round-the-world telephone service. It was expected that this system would be completed in stages over some ten years.

Consultation. "The conference acknowledged the value of existing arrangements for economic consultation and agreed to co-ordinate them under the name of the Commonwealth Economic Consultative Council. The conference welcomed the generous offer made by the U.K. Government to provide a Commonwealth House in London, to be available for the constituent bodies of the Council and for other Commonwealth meetings.

General Survey of Conference Proceedings.

The following is the abbreviated text of Part I (General Survey) of the report issued by the conference on Sept. 26.

Introduction. "The Commonwealth has a population of 660,000,000 people and covers an area of 12 million square miles. The ties that hold its members together reach into every part of the world and unite countries of almost every race and at almost every stage of economic development . . . The economic problems of the members of the Commonwealth reflect these differences in economic advancement. But the Commonwealth countries are inter-dependent in that the progress of each is affected in greater or lesser degree by the prosperity of the others. In particular, the rapid advancement of the less developed countries is a matter of major concern to their more prosperous partners.

"Commonwealth countries all hold a number of economic objectives in common. They all wish to see rapid economic growth in the world as a whole, since this is a condition for their own betterment. They all have a direct stake in the growth of world trade. They are all concerned that sterling, in which the trade of most of them is financed, should be strong. They all realize that these objectives call for close collaboration both between themselves and with like-minded countries. For these reasons the central theme that has run through our discussions in Montreal has been an expanding Commonwealth in an expanding world.

Trade Problems. "The trading problems faced by Commonwealth countries at the present time are of many different kinds. Some countries have been adversely affected by widely fluctuating commodity prices and by unfavourable terms of trade. Some have found their principal exports increasingly damaged by protectionism. Some have been hampered in the conduct of their trade by inadequate exchange reserves and by restrictions that they have felt obliged to place on their imports. Such restrictions also affect exporting countries.

"Instability in commodity prices is particularly serious for countries which depend on only one or two commodities for their export earnings, since it deprives them of a stable basis on which to plan their development programmes. Arrangements for the price stabilization of some commodities already exist; for others we agreed to participate in an examination of the problem on a commodity-by-commodity basis in order to arrive at understandings about the best methods for moderating short-term price fluctuations. We recognize that, for the most part, effective action will require the participation of the important producing and consuming countries throughout the world . . . It is our hope that countries outside the Commonwealth will accept our objectives and be prepared to join us in trying to achieve them.

"We have also been impressed by the problems created for many Commonwealth countries by policies of protectionism in the fields of agriculture and mineral production. We are agreed on the need for measures to mitigate the adverse effects of protection afforded to basic agricultural commodities and minerals. Urgent consideration should be given to the question how the General Agreement on Tariffs and Trade could be strengthened to make it a more effective instrument for dealing with these problems. We also realize how important it is that efforts should be made to avoid placing obstacles in the way of the export of manufactured goods from the less developed countries of the Commonwealth.

"We examined the influence which the European Economic Community might have on Commonwealth economic interests, and reviewed the progress of the negotiations for a European Free Trade Area. It is our conviction that an outward-looking Free Trade Area, in which trade would be increased rather than merely re-channelled, would contribute to the objective of an expanding world economy. It is our hope that closer economic association in Europe will not be permitted to result in a contraction of trading opportunities for outside countries or in an extension of protection. An exchange of views also took place on the various aspects of the new situation created by the more active participation of a number of the Sino-Soviet group of countries in world markets.

"It is our firm belief that Commonwealth countries should continue to work in no exclusive spirit towards a multilateral trade and payments system over the widest possible area. We are also convinced that there are many things which can appropriately be done to increase trade between one Commonwealth country and another. Commonwealth participation in the preferential system has proved to be of mutual benefit, and we have no intention of discarding or weakening it. Some of the trade agreements between Commonwealth countries now require review, and work has begun on re-negotiating them. It is our intention to work towards an expansion of Commonwealth trade by all practicable means, and we have explored a number of these.

Telecommunications. "Over the years, Commonwealth trade has been promoted and Commonwealth associations reinforced by various special provisions for Commonwealth communications through postal services, telegraph, and radio. With this in mind, and on the basis of a recent report by the Commonwealth Telecommunications Board, it was agreed in principle that a round-the-world Commonwealth co-axial cable telephone system should be constructed.

Sterling. "Sterling is the currency in which most of the trade of Commonwealth countries is transacted, and it is essential to the stability and progress of the countries of the sterling area and of the world trading community as a whole that it remains strong. We noted with satisfaction the increasing strength that it has recently displayed, and we are confident that, in its traditional role as an international currency, it will play an increasingly important part in world trade and payments. It remains our objective that sterling should be made fully convertible as soon as the necessary conditions have been achieved, and that trade discrimination should continue to be progressively removed in view of the advantages to be gained by so doing. We were glad to note the progress that has been made, and we received with particular satisfaction the announcements made by the United Kingdom of further steps in that direction. The final decision on the timing of the convertibility of sterling must rest with the United Kingdom, who would, however, take into account the interests of the Commonwealth as a whole.

World Liquidity. "We were greatly encouraged by the announcement made by President Eisenhower [see 16403 A] that the United States would propose that a substantial enlargement of the resources of the I.M.F. should be considered. We endorse that initiative and will give it full support in principle at the meetings that are shortly to be held in New Delhi. We will support the parallel initiative that is also to be taken by the United States for the consideration of a substantial increase in the resources of the International Bank for Reconstruction and Development.

Commonwealth Development. "In our judgment it is of the utmost importance that the development programmes [of the less developed countries] should be successful and that the hopes they have aroused should not be frustrated. We cannot be indifferent to the poverty in some Commonwealth countries. The concern we feel is based fundamentally on common humanity, but it is supported as well by the knowledge that the economic development of Commonwealth countries would be of material benefit to us all. We also know that if the hopes of the less-developed countries are too long deferred, the democratic institutions which we all cherish might be in danger. Accordingly, we agreed that we must do all we can, even to the extent of some sacrifice, to assist in the solution of these vital problems.

"One of the sharpest limitations on development is the world-wide shortage of capital. It was realized that under-developed countries have to mobilize increasingly their own savings to finance their programmes of capital investment, but . . . a large gap will still remain if economic development is to proceed at an adequate pace. That gap can only be filled by investment from abroad. Private investors could play an important part, and it was agreed that capital-exporting and capital-importing countries alike should do what they can to encourage the flow of private investment to the less developed countries of the Commonwealth. But in present circumstances there is also need of assistance from governments. During the conference announcements were made of measures to increase the already considerable flow of capital to those countries. However, the needs of under-developed countries for capital cannot be fully met from within the Commonwealth, and they must continue to look also to other countries and to the international institutions, especially the International Bank, for development finance.

"We have considered whether the development of Commonwealth countries could be assisted by the setting up of a new institution such as a Commonwealth Development Bank. The idea has attractions, but doubts were expressed whether in existing circumstances the creation of such an institution would in fact help to attract

additional capital. We decided to consider this proposal again after decisions have been taken in regard to any expansion of the resources of the International Bank and the International Monetary Fund. We agreed to study further the question of methods of mobilizing resources for Commonwealth development.

Education and Training. "Another way in which Commonwealth countries are assisting in the economic development of the less-developed countries is through the provision of technical assistance . . . We all agreed on the great importance of education and training and expressed our resolve to help one another as much as lies in our power within this field. The supply and training of teachers is of special importance. We agreed in principle to establish a new scheme of Commonwealth scholarships and fellowships, and to convene a meeting early next year which would work out the details of the new scheme and also consider what might be done to expand and improve mutual assistance between Commonwealth countries.

Consultation. "Commonwealth consultation and co-operation in economic matters are of primary importance in achieving our objectives in the economic field. We agreed that the present machinery for consultation is working well. it is flexible and informal and well fitted to the family character of the Commonwealth relationship. We decided that the existing arrangements should be co-ordinated under the name of a Commonwealth Economic Consultative Council. We welcomed an offer by the U K. Government to provide a Commonwealth House to be available for the constituent bodies of the Council and for other Commonwealth meetings.

Conclusion. "The objectives we have outlined, under our general theme of an expanding Commonwealth in an expanding world, require the co-operation of other countries, and especially that of the United States with its great economic power . . . But as a family of free nations in all parts of the world we have a crucial part to play. We have a unique responsibility to help in fostering the progress of human society and in solving its problems. That is a duty which we are determined to discharge to the utmost of our ability."

The Board of Trade in London announced on Sept. 24 that the Open General Licences had been amended to give effect to the measures on dollar import liberalization announced by Sir David Eccles on Sept. 17.—(Times - Daily Telegraph - Manchester Guardian - Montreal Star - External Affairs Department, Ottawa - Australian News and Information Bureau - N.Z. Directorate of Information, Wellington - Indian and Pakistan High Commissioners' Offices, London - Financial Times - Board of Trade Journal) **(Prev. rep. 15796 A.)**

A. UNITED STATES. — Federal Aviation Agency.

Lieutenant-General Elwood R. Quesada (retd.) was nominated by President Eisenhower on Sept. 30 as Administrator of the Federal Aviation Agency—a new agency for centralized regulation of air safety and air traffic, created by Congressional legislation before the autumn recess. As the legislation laid down that the Administrator of the F.A.A. must be a civilian, General Quesada will resign his commission on the retired list of Air Force officers before taking up his new appointment.

General Quesada retired from the U.S. Air Force in 1951 after 34 years' service. He subsequently held the posts of Special Assistant to the President on Aviation Matters, chairman of the Airways Modernization Board, and chairman of the Air Co-ordination Committee, and has been President Eisenhower's chief adviser on aviation matters since 1957.

The Federal Aviation Agency will come officially into existence on Dec. 31, 1958, when it will take over all the functions of the Civil Aeronautics Authority and part of the functions of the Civil Aeronautics Board. The latter agency will retain its existing functions as regulator of fares, fees and practices of airlines, as well as its jurisdiction over accident investigation.—(New York Times - New York Herald Tribune) **(Prev. rep. 16208 A ; New Agencies, 16349 C ; 16328 D.)**

B. UNITED KINGDOM. — Ford Foundation's $250,000 Grant for London School of Economics.

The Ford Foundation announced in New York on Oct. 12 that it had made a grant of $250,000 (£89,280) to the London School of Economics, to be used for the establishment of an educational programme for graduate students from less-developed countries and for other international activities, including exchanges of students. The Foundation also announced a grant of $90,000 (£32,142) to the School of Oriental and African Studies at London University, to be used for a co-operative research project by British and American scholars on the economic history of East and South-East Asia.—(Times - Daily Telegraph)

C. BRAZIL. — Population Figures.

Official estimates published in Rio de Janeiro in August showed that the population of Brazil on July 1 totalled 68,101,627.—(Brazilian Government Bulletin) **(15152 C.)**

D. UNITED KINGDOM. — House of Lords. - Introduction of Life Peers and Peeresses.

The ten life peers and four life peeresses created on June 24 took the oath in the House of Lords on Oct. 21-22—the first time in its 1,000-year history that women had taken their seats in the House. The titles taken by the new life peers and peeresses were as follows :

Dame Katherine Elliot—Baroness Elliot of Harwood, of Rulewater in the County of Roxburgh.

Mary Irene, Baroness Ravensdale—Baroness Ravensdale of Kedleston, of Kedleston in the County of Derby.

Stella, Marchioness of Reading—Baroness Swanborough, of Swanborough in the County of Sussex.

Mrs. Barbara Wootton—Baroness Wootton of Abinger, of Abinger Common in the County of Surrey.

Sir Robert Boothby—Baron Boothby, of Buchan and Rattray Head in the County of Aberdeen.

Mr. Victor Collins—Baron Stonham, of Earl Stonham in the County of Suffolk.

Sir Ian Fraser—Baron Fraser of Lonsdale, of Regent's Park in the County of London.

Sir Charles Geddes—Baron Geddes of Epsom, of Epsom in the County of Surrey

Mr. Victor Ferrier Noel-Paton—Baron Ferrier, of Culter in the County of Lanark.

Mr. Edward Shackleton—Baron Shackleton, of Burley in the County of Southampton.

Sir John Stopford—Baron Stopford of Fallowfield, of Hindley Green in the County Palatine of Lancaster.

Dr. Stephen Taylor—Baron Taylor, of Harlow in the County of Essex.

Sir Edward Twining—Baron Twining, of Tanganyika and of Godalming in the County of Surrey.

Mr. Daniel Granville West—Baron Granville-West, of Pontypool in the County of Monmouth.

The following titles were taken by the two recipients of peerages in the last Birthday Honours : Mr. Oliver Poole—Baron Poole, of Aldgate in the City of London ; Sir Ellis Robins—Baron Robins, of Rhodesia and Chelsea.
(Times - Daily Telegraph) **(Prev. rep. 16313 A ; 16289 A.)**

E. CEYLON. — Loan from Communist China.

An agreement between Ceylon and the Chinese People's Republic was signed in Colombo on Sept. 17, whereby China granted Ceylon a loan of 50,000,000 rupees.

It was provided that the loan would be made in four annual instalments, beginning in 1958, and would be effected through the delivery of industrial equipment, materials and other supplies required by Ceylon; a Sino-Ceylonese committee would decide annually about the specific kind and quantity of the deliveries to be made and the loan amount required to cover it. The loan would bear 2½ per cent interest per annum and would be repayable in ten equal annual instalments from 1961; repayment would be made either in the currency of a third country (to be agreed upon by both Governments) or through the export of Ceylonese goods to China.

The agreement was signed by Mr. Bandaranaike, the Prime Minister of Ceylon, and Mr. Chan Tsan-ming, Chinese Ambassador in Colombo.—(Ceylon Government Information Dept.)
(Prev. rep. 15802 B)

F. INDIA. — Plan for First National Expressway.

The Indian Minister for Transport and Communications (Mr. Patil) announced in mid-October that he had sanctioned the expenditure of 50,000,000 rupees (£3,750,000) as a first instalment towards the construction of a new "national expressway" linking Calcutta with Durgapur, centre of one of the new steel plants. The "expressway"—the first of its kind in India—would be about 100 miles long, have four traffic lanes (two in each direction), and cross other roads by means of fly-over bridges. The cost of construction—160,000,000 rupees (£12,000,000)—would be entirely borne by the Central Government, but a special tax would be levied on motor vehicles using the expressway.

Mr. Patil added that the Government proposed to construct similar national expressways in other parts of India.
(The Statesman, Calcutta)

G. LEBANON. — Portfolios in Coalition Cabinet.

The distribution of portfolios in the coalition Government headed by M. Rashid Karami and formed on Oct. 15 was as follows : M. Rashid Karami—Prime Minister, Finance, Economic Affairs, Defence, and Information ; M. Pierre Gemayel—Deputy Prime Minister, Public Works, Education, and Agriculture ; M. Hussein Oweimi—Foreign Affairs, Justice, and Planning ; M. Raymond Eddé—Interior, Social Affairs, and Communications.—(Le Monde, Paris)
(Prev. rep. 16439 A.)

A. UNITED KINGDOM. — Liberal Party. - The 1958 and 1957 Party Conferences. - Debates and Resolutions. - Mr. Grimond's Speeches.

The annual Assembly of the Liberal Party for 1958 was held at Torquay on Sept. 18-21, the principal subjects discussed and resolutions adopted being summarized below :

Foreign Affairs. The Assembly adopted a resolution (moved for the executive by Lieut.-Colonel Lort-Phillips, prospective candidate for Gloucester) calling on the Government (1) to take steps to secure the admission to the U.N. of all countries at present unrepresented, including the People's Republic of China ; (2) to propose at the U.N. the neutralization of Formosa and the recognition of the offshore islands as an integral part of China ; (3) to propose at the U.N. " that the security of all those international trade routes on which depend the progress and economic development of mankind, and especially of the Asian nations, should be made a responsibility of the United Nations"; (4) to take steps towards establishing a U.N. Police Force.

Nuclear Disarmament. After a heated debate marked by sharp differences of opinion, the Assembly adopted a resolution by the executive, amended in considerable respects by Colonel Geoffrey Taylor (prospective candidate for Yeovil and formerly Professor of Medicine at Lahore University College), which (1) referred to the recent report of the U.N. Scientific Committee on the effects of atomic radiation (see 16370 A) ; (2) approved the Anglo-American proposal to suspend nuclear tests, but deplored the continuation of the present series (see 16442 A) ; (3) condemned the Government for having "misled the public about the dangers of rising radio-activity " and for " providing an excuse for other countries to compete in the production of nuclear weapons " ; (4) called on the Government (*a*) " to make known the present levels and dangers of radio-activity in Britain," (*b*) to cease nuclear tests immediately and " ask the American Government to do the same " ; (*c*) to introduce a motion at the U.N. " with the purpose of preventing other countries from testing and making nuclear weapons," and (*d*) to initiate a NATO conference " to reconsider the full implications of the policy of the nuclear deterrent " By a big majority, the Assembly also urged that Britain should abandon the manufacture and testing of the hydrogen bomb—thereby, as pointed out by several newspapers, placing itself to the Left of the Labour Party on this issue.

About 30 of those present at the Liberal Assembly (out of a total of some 900 attending the conference) opposed the unilateral renunciation of the H-bomb by Britain ; they included Sir Andrew McFadyean (a member of the executive and a former president of the Liberal Party), who supported the Government's attitude on this question.

Agriculture. Sharp divergencies of opinion also occurred in the debate on agriculture, during which many delegates—notably Mr. Smedley, prospective candidate for Walthamstow West—demanded a return to " traditional Liberal free trade " in the party's agricultural policy. After an acrimonious discussion, a resolution was adopted criticizing the Government's present price-support policy for agriculture as " wasteful and inefficient " and advocating a 12-point programme including reform of the taxation system, with rating based on site values rather than on improvements ; facilities for granting long-term, low-interest Exchequer loans for farm improvements ; the establishment of a farm bank to provide short-term credits for the small farmer ; provision of better and cheaper transport ; and the strengthening of existing legislation against cartels, price rings, and restrictive practices.

In its final form the resolution incorporated an amendment (moved by Mr. Smedley) that " action be taken to achieve the distribution of agricultural surpluses for areas of need by the creation of free trade markets in the United Kingdom through the removal of restrictions on the free movement of goods, capital, and people." In moving this amendment (which replaced a previous amendment calling for the adoption of a " unilateral free trade policy " by Britain), Mr. Smedley vigorously attacked the executive for its " total lack of leadership " in formulating any consistent policy on agriculture.

Education. Wide differences of opinion were also in evidence during the debate on education. Dr. J. F. S. Ross (chairman of the party's education committee) presented a policy statement which stressed the need for smaller classes in view of the present overcrowding in schools, and which urged that the first steps to remedy this situation should be taken in the secondary rather than in the primary schools, in view of the " acute discontent associated with the change-over at 11 plus."

Councillor H. M. Dewey (a Wiltshire schoolmaster) urged, however, that the problem should be tackled first in the primary schools rather than in the secondary schools ; this view obtained strong support, and Mr. Dewey's amendment to that effect was adopted by a large majority. Dr. Ross thereupon pointed out that acceptance of Mr. Dewey's amendment was tantamount to the rejection of the party's educational programme, and meant that the Liberal Party would enter the next general election without any educational policy whatever. After further debate, the Assembly reversed its original decision, rescinded Mr. Dewey's amendment, and adopted the party policy statement.

Industrial Relations. Resolutions were adopted which (*a*) asked that it should be made compulsory to hold secret ballots among members of trade unions before any resort to strike action, and (*b*) called for co-ownership and co-partnership schemes between managements and workers.

Race Relations. An emergency resolution (moved by Mr. Edwin Malindine, prospective candidate for North Cornwall) was adopted condemning the racial disturbances in Nottingham and West London (see 16428 A), rejecting colour discrimination in any form, and opposing restrictions on immigration from the Commonwealth.

Mr. Joseph Grimond (leader of the Liberal Party) wound up the conference with a speech in which he strongly criticized the two major parties and the T.U.C., and in which he claimed that the Liberal Party was increasingly becoming the party of youth, with a large membership in the universities.

Mr. Grimond denounced the Government's foreign policy as a " prolonged and unmitigated disaster " which, in Cyprus, appeared irremediable and was threatening to repeat the history of Ireland. After stressing that " power politics " were out of date in the modern age, and calling upon the " Blimps of 1958 " to recognize this fact, Mr. Grimond declared : " We should abandon many of the outposts of military power which we strain ourselves to maintain ; pool our defence resources with the United States ; stop making our own hydrogen bombs ; and devote our efforts to helping and advising Asia and Africa. We should infiltrate argument, liberal reason, and ideas into the neutral world . . . To believe that you can shoot, hector, or bully smaller nations today . . . is like a 19th-century landlord clinging to the belief that he can for ever oppress his tenants. We are in grave danger of losing the battle for other men's minds . . . "

The Liberal leader went on to declare that the first essential for creating a " true democracy " was to " bust open the patronage and privilege by which both Socialists and Tories manipulate our politics and maintain their rigid out-of-date party structures." He continued : " Far too many prizes in the law, the Church, commerce, and social life go to those whom the ruling clique find agreeable. Why should the law, from the Lord Chancellor to the humblest J.P., be dominated by politics ? Why should bishoprics any longer be in the gift of the Prime Minister ? Why, to enable us to have a Second Chamber, do we have to perpetuate the elaborate titles and absurd trappings of medieval barbarism ? . . . Peerages, life peerages, directorships, and perquisites of every sort are showered on those the Prime Minister and the ruling party find agreeable . . . "

Mr. Grimond also strongly criticized trade union organization in its present form, declaring that there was " a real danger that the leadership of the T.U.C. is becoming a frozen hierarchy which is both out of touch with its members and failing to perform useful service for the community at large." After saying that he saw " no more reason to bow the knee to T.U.C. knights than to Tory knights," he stressed that the trade unions should accept scrutiny of their doings and show some justification for the special privileges granted to them by law. He asserted in this connexion that the T.U.C. had " turned a blind eye " to certain practices which affronted individual liberty and had actually encouraged practices which kept down the standards of living of the workers.

In conclusion, Mr. Grimond described the Liberal Party as the party of youth, with a large and growing membership at all the universities—" a red-brick party." It had today a great opportunity to win the support of the new generation of young technicians who were dissatisfied with both the major parties and found nothing in those parties' programmes to attract their enthusiasm.

Balloting for the six vice-presidents of the Liberal Party resulted in the election of Lady Violet Bonham Carter, Mr. Frank Byers, Mr. H Graham White, Lord Beveridge, Sir Andrew McFadyean, and Mr. Elliott Dodds.

The 1957 Liberal Assembly.

At the Liberal Assembly of 1957 (held at Southport on Sept. 19-21) Mr. Grimond had also laid emphasis on the emergence of a new " uncommitted " generation of young scientists, technicians, and artisans who were " neither Tory nor trade union fodder of the old type " and who were increasingly reacting against the " two-party, two-class " struggle waged by the Conservative and Labour parties.

Attacking both the Conservative and the Labour parties for their " arrogance " and " blindness," Mr. Grimond asserted that Conservative Governments under three successive Prime Ministers had failed to stop the rise in the cost of living or to formulate a coherent foreign policy. On the other side, the Labour Party's proposals for further nationalization would shake confidence in the nation's financial stability still more. After asking who was going to pay for the " experiments of Socialist intellectuals," Mr. Grimond declared that the people wanted, not more nationalization, but partnership in industry.

Mr. Grimond emphasized that the Liberal Party which was " not provided for by the rich, nor kept by trade union funds " was not prepared to play the role of a " brains trust standing on the sidelines and shouting advice to Tories and Socialists alike." Nor was he personally prepared " to lead a party of eunuchs which has forsworn direct political action." The party would neither " go for a ride on the Tory tiger " nor accept Socialist solutions, and at the next general election it would fight " as many seats as the people of this country demand that we shall fight." After pointing out that there were already 150 Liberal candidates in the field, Mr. Grimond declared : " We aim to split political complacency, and if necessary we shall split the vote if in doing so we can unite the nation. We aim to break into politics because we believe we have something to say and do."

In conclusion, Mr. Grimond said that the Liberal Party had "passed the point of no return" and that in the next ten years it was a question of "get on or get out." The party, though strong in enthusiasm, was weak in size, but this could be remedied if the large number of "fellow-travelling Liberals" became "active, card-carrying members of the party."

The following principal resolutions were adopted at the 1957 Liberal Assembly :

Foreign Affairs. A resolution urging the Government to take the initiative in European affairs, "in particular by giving a positive lead in the negotiations for a European Free Trade Area," and to advance the status of the U.N. so that its decisions would be accepted by all member-nations.

Commonwealth and Colonial Affairs. A resolution calling for the establishment and maintenance of the principles of racial equality, respect for the individual, "justice without fear or favour," and freedom from external or internal oppression in all countries of the Commonwealth.

Nuclear Tests. A resolution urging the Government to take all possible steps to bring about the abolition of nuclear tests, and to give a pledge that no further tests would be made by Britain.

Individual Liberties. A resolution expressing "deep concern at the number of cases of victimization of the individual occurring in industry and trade generally," and commending the action of the Liberal Party executive in setting up a Civil Liberties Committee to investigate all cases brought to its notice.

In the debate on this resolution (which was passed unanimously) numerous examples were cited of workers "sent to Coventry" by their unions, of traders dictated to by powerful suppliers as to the manner in which they should run their businesses, and of individuals victimized by Government Orders and monopoly schemes. Many prominent Liberals—among them Lord Rea (leader of the Liberal peers), Sir Andrew McFadyean, and Mr. Donald Wade, M.P.—stressed the imperative need for legislation to remedy these injustices.

Home Ownership. A resolution on "liberty and opportunity" calling *inter alia* for the encouragement and extension of home ownership.

It was announced on Jan. 18, 1958, that Lord Trefgarne, who left the Labour Party in 1952 and had since sat as an Independent, had joined the Liberal Party in the House of Lords. As Mr. Garro-Jones he was Liberal M.P. for South Hackney from 1924-29 and Labour M.P. for Aberdeen from 1935-45 ; he was raised to the peerage in 1947 and appointed by the Labour Government as first chairman of the Colonial Development Corporation.—(Times - Manchester Guardian)

(Prev. rep. Liberal Party, 15345 A.)

A. UNITED STATES. — Mr. Lewis Strauss becomes Secretary of Commerce. - Dr. Paarlberg and Dr. Brandt appointed Economic Advisers to President.

Mr. Lewis R. Strauss (62), lately chairman of the U.S. Atomic Energy Commission, was nominated by President Eisenhower on Oct. 24 as Secretary of Commerce in succession to Mr. Sinclair Weeks (65), who had held the post for six years and resigned from the Administration because of "pressing business, personal and family considerations."

It was announced in Washington on Sept. 26 that Dr. Don Paarlberg had been appointed President Eisenhower's principal assistant for economic affairs at the White House *vice* Dr. Gabriel Hauge, who had resigned to return to private business life. Dr. Paarlberg (47) was previously Assistant Secretary of Agriculture and, with Mr. Benson (the Secretary of Agriculture,) was the chief architect of the Administration's farm policy.

Dr. Karl Brandt was appointed a member of the President's three-man council of economic advisers on Sept. 27 *vice* Dr. Joseph S. Davis, who had resigned. The other members of that council are Dr. Raymond J. Saulnier (chairman) and Mr. Paul W. McCracken.—(New York Herald Tribune)

(Prev. rep. 16328 D ; 16170 A.)

B. LEBANON. — Amnesty for Belgian Diplomat.

The Belgian Consul-General in Damascus (M. Louis de San) was sentenced to death by a Beirut military court on July 19 on a charge of smuggling arms from Syria to the Lebanese rebels [see page 16181, end of first column]. M. de San had denied all knowledge of the arms found in his car, and had also pleaded diplomatic immunity—a plea which was rejected on the ground that he was a member of the consular and not of the diplomatic corps. The sentence was subsequently commuted to 20 years' imprisonment, and on Sept. 16 M. de San was released under an amnesty decree signed by President Chamoun—one of M. Chamoun's last official acts before relinquishing the presidency to General Fuad Chehab.
(Times - Le Monde, Paris - New York Times)

(Prev. rep. 16439 A ; 16181 A.)

C. SOUTH AFRICA. — Cabinet Reorganization.

A reorganization and enlargement of the Union Cabinet was announced on Oct. 20 by the Prime Minister, Dr. Verwoerd, involving the appointment of four new Ministers. The new Cabinet list was :

Dr. Hendrik F. Verwoerd ..	Prime Minister.
Mr. C. R. Swart	Minister of Justice and Leader of the House of Assembly.
Mr. Paul Sauer	Lands, Forestry, and Public Works.
Mr. Eric Louw	External Affairs.
Dr. T. E. Donges	Finance.
Mr. F. C. Erasmus ..	Defence.
Mr. B. J. Schoeman ..	Railways and Transport.
Mr. J. F. Naude	Interior.
Mr. J. H. Serfontein ..	Education, Arts and Science, Social Welfare and Pensions.
Mr. Jan de Klerk	Labour and Mines.
Mr. Pieter le Roux	Agricultural Technical Services and Water Supplies.
Mr. M. D. C. de Wet Nel ..	Bantu Administration and Development.
*Mr. W. A. Maree	Bantu Education.
*Dr. Albert Hertzog ..	Health, and Posts and Telegraphs.
*Mr. D. C. Huys	Agricultural Economics and Marketing.
*Dr. Nicolaas Diederichs ..	Economic Affairs.

*New Ministers.

The new Ministers are all prominent members of the Nationalist Party and strong supporters of *apartheid*. Mr. Maree (M.P. for Newcastle, Natal) was a member of the Native Affairs Commission ; Mr. Huys (M.P. for False Bay) is a farmer from the Cape ; Dr. Diederichs (M.P. for Losberg) is a well-known economist ; and Dr. Hertzog (M.P. for Ermelo and son of the late General Hertzog) is closely connected with the Afrikaans newspaper *Die Vaderland*.

Dr. Verwoerd also appointed four Deputy Ministers, who will not sit in the Cabinet. They were Mr. F. E. Mentz, M.P. for Westdene ; Mr. P. W. Botha, M.P. for George ; Mr. M. Viljoen, M.P. for Alberton ; and Mr. B. J. Vorster, M.P. for Nigel. Mr. Mentz became Deputy Minister for Bantu Affairs and Administration, Mr. Botha for the Interior, Mr. Viljoen for Labour and Mines, and Mr. Vorster for Education, Arts and Science, and Social Welfare and Pensions.

The Cabinet reorganization involved the following governmental changes :

(1) Dr. Donges, formerly Minister of the Interior, and Mr. Naude, formerly Minister of Finance, exchanged their respective portfolios.

(2) The portfolio of Agriculture (previously held by Mr. le Roux) was divided into two separate portfolios—those of Agricultural Economics and Marketing and of Agricultural Technical Services, held respectively by Mr. Huys and Mr. le Roux.

(3) The portfolio of Native Affairs (a designation changed to Bantu Affairs) was similarly divided into two separate portfolios - Bantu Administration and Development and Bantu Education, held respectively by Mr. de Wet Nel and Mr. Maree.

(4) Mr. de Wet Nel relinquished his former portfolio of Education, Arts and Science to Mr. Serfontein.

(5) Dr. Diederichs succeeded Dr. Albertus Van Rhijn as Minister of Economic Affairs, consequent on Dr. Van Rhijn's appointment as High Commissioner in London (announced on Oct. 14) in succession to Dr. E. J. Holloway.

Dr. Verwoerd relinquished the former portfolio of Native Affairs, which he had retained *ad interim* since he succeeded the late Mr. Strydom as Prime Minister ; he will preside over a ministerial committee which will co-ordinate Bantu policy.

D. AUSTRALIA. — Sir Leslie Martin appointed Chairman of Permanent Committee on Universities.

The Federal Prime Minister (Mr. Menzies) announced on Oct. 22 that Sir Leslie Martin had been appointed chairman of the permanent committee to be set up as a result of the Government's acceptance of the Murray Report on the future of the Australian universities. Sir Leslie Martin has been Defence Scientific Adviser and chairman of the Defence Research and Development Policy Committee since 1948.

A. CYPRUS. — British Seven-Year "Partnership" Plan. - Proposed Association of Greece and Turkey with Government of Cyprus. - Mr. Macmillan's Visits to Athens and Ankara. - Revised British Plan accepted by Turkey. - Rejection by Greek Government and Archbishop Makarios. - Archbishop's Proposals for Independent Cyprus under U.N. Guarantee. - NATO Intervention in Cyprus Dispute.

A new British plan for Cyprus, described by Mr. Macmillan as an "adventure in partnership," was announced by the Prime Minister to the House of Commons on June 19 and simultaneously issued as a White Paper. Its main points were as follows :

(1) The international status of Cyprus would remain unchanged for the next seven years (i.e. British sovereignty over the island would continue during that period).

(2) During the seven-year period a system of representative government and internal autonomy would be worked out by establishing separate Houses of Representatives for the Greek and Turkish Cypriot communities. Each of these Houses would have complete autonomy in communal affairs.

(3) Authority for internal administration (other than communal affairs and internal security) would be undertaken by a Governor's Council. This body would include representatives of the Greek and Turkish Governments and four Greek Cypriot and two Turkish Cypriot Ministers drawn from the Houses of Representatives.

(4) Responsibility for external affairs, defence, and internal security would be reserved to the Governor, acting after consultation with the representatives of the Greek and Turkish Governments.

(5) Greek and Turkish Cypriots would possess Greek and Turkish nationality respectively, while retaining their existing British nationality (i.e. every Cypriot would have dual nationality).

(6) At the end of the seven-year period Britain would be prepared "to share the sovereignty of the island with her Greek and Turkish allies," subject to retention of bases and facilities needed for the discharge of Britain's international obligations.

The New British Plan for Cyprus.

Mr. Macmillan made the following statement to the House on the new proposals, the White Paper being worded in identical terms :

"The policy of H.M. Government in Cyprus has had four main purposes :

(1) To serve the best interests of all the people of the island.

(2) To achieve a permanent settlement acceptable to the two communities in the island and to the Greek and Turkish Governments.

(3) To safeguard the British bases and installations in the island, which are necessary to enable the United Kingdom to carry out her international obligations.

(4) To strengthen peace and security and co-operation between the United Kingdom and her allies in a vital area.

"These are the aims which the Government have consistently pursued and which have guided their efforts in recent months to find common ground on which an agreed settlement might be reached. It is deeply regretted that all attempts in this direction have hitherto proved unsuccessful.

"In view of the disagreement between the Greek and Turkish Governments and between the two communities in Cyprus, and of the disastrous consequences for all concerned if violence and conflict continue, an obligation rests with the U.K. Government, as the sovereign Power responsible for the administration of the island and the well-being of its inhabitants, to give a firm and clear lead out of the present deadlock. They accordingly declare a new policy which represents an adventure in partnership—partnership between the communities in the island, and also between the Governments of the United Kingdom, Greece, and Turkey.

"The following is an outline of the partnership plan :

"Cyprus should enjoy the advantages of association, not only with the United Kingdom and therefore with the British Commonwealth, but also with Greece and Turkey.

"Since the United Kingdom, Greece, and Turkey all have an interest in Cyprus, H.M. Government will welcome the co-operation and participation of the two other Governments in a joint effort to achieve the peace, progress, and prosperity of the island.

"The Greek and Turkish Governments will each be invited to appoint a representative to co-operate with the Governor in carrying out this policy.

"The island will have a system of representative Government, with each community exercising autonomy in its own communal affairs.

"In order to satisfy the desire of the Greek and Turkish Cypriots to be recognized as Greeks and Turks, H.M. Government will welcome an arrangement which gives them Greek or Turkish nationality, while enabling them to retain British nationality.

"To allow time for the principle of partnership to be fully worked out and brought into operation in the necessary atmosphere of stability, the international status of the island will remain unchanged for seven years.

"A system of representative Government and communal autonomy will be worked out by consultation with representatives of the two communities and with representatives of the Greek and Turkish Governments.

"The essential provisions of the new Constitution will be :

(*a*) There will be a separate House of Representatives for each of the two communities, and these Houses will have dual legislative authority in communal affairs.

(*b*) Authority for internal administration, other than communal affairs and internal security, will be undertaken by a Council presided over by the Governor and including representatives of the Greek and Turkish Governments and six elected Ministers drawn from the House of Representatives, four being Greek Cypriots and two Turkish Cypriots.

(*c*) The Governor, acting after consultation with the representatives of the Greek and Turkish Governments, will have reserve powers to ensure that the interests of both communities are protected.

(*d*) External affairs, defence, and internal security will be matters specifically reserved to the Governor, acting after consultation with the representatives of the Greek and Turkish Governments.

(*e*) The representatives of the Greek and Turkish Governments will have the right to require any legislation which they consider discriminatory to be reserved for consideration by an impartial tribunal.

"If the full effects of this policy are to be realized, it is evident that violence must cease. Subject to this, H.M. Government intend to take progressive steps to relax the emergency regulations, and eventually to end the state of emergency. This process would include the return of those Cypriots at present excluded from the island under the emergency regulations.

"A policy based on these principles and proposals will give the people of the island a specially favoured and protected status. Through representative institutions they will exercise authority in the management of the island's internal affairs, and each community will control its own communal affairs. While the people of the island enjoy these advantages, friendly relations and practical co-operation between the United Kingdom, Greece, and Turkey will be maintained and strengthened as Cyprus becomes a symbol of co-operation instead of a cause of conflict between the three allied Governments.

"H.M. Government trust that this imaginative plan will be welcomed by all concerned in the spirit in which it is put forward, and for their part they will bend all efforts to ensuring its success. Indeed, if the Greek and Turkish Governments were willing to extend this experiment in partnership and co-operation, H.M. Government would be prepared, at the appropriate time, to go further and—subject to the reservation to the U.K. of such bases and facilities as might be necessary for the discharge of her international obligations—to share the sovereignty of the island with their Greek and Turkish allies as their contribution to a lasting settlement.

"I have sent a personal appeal to the Prime Ministers of Greece and Turkey asking them to approach this policy in a spirit of co-operation and moderation. I have given the House the main outlines of the plan. There are, of course, many details which will require to be filled in after discussion. We are therefore not asking for immediate acceptance of our policy in every particular.

"While I recognize that some initial reactions may be unfavourable, I believe that further consideration will lead to recognition of the genuine merits of this policy. Meanwhile, it is a great support to the Government in discharging their heavy responsibilities in this matter to have the good will and understanding of the North Atlantic Council. Their assistance in the process of conciliation is proving . . . of the highest value. Finally, I trust that our efforts, which are constructive and fair, will commend themselves to the House and to the country."

Mr. Gaitskell (Leader of the Opposition) said that the Prime Minister's "full, detailed, and important statement" would be carefully considered by the Opposition before any opinions were expressed ; the Opposition's attitude would be clearly set forth in the coming parliamentary debate on Cyprus (see below), and in the meantime he wished to urge on members of the Opposition "the greatest restraint at this stage."

The Government's new plan for Cyprus was also announced to the House of Lords on the same day by Lord Home, Leader of the House. It was described by the leader of the Labour peers (Viscount Alexander of Hillsborough) as "broad and imaginative," and was also commended by two former Governors of Cyprus—Lord Winster (a Labour peer) and Field-Marshal Lord Harding—and by Lord Radcliffe, author of the earlier constitutional proposals for the island.

In the Commonwealth, the plan was warmly commended by the Labour Prime Minister of New Zealand (Mr. Walter Nash), who described it as "a sincere and imaginative effort

to provide a new basis for a settlement," and by Mr. Casey, the Australian Minister of External Affairs. Mr Nash regarded it as specially important that the interests of Greece and Turkey in Cyprus had been formally recognized, and that both countries would be given " the opportunity to participate in the application of the new policy."

As stated by Mr. Macmillan, the British proposals had been communicated in detail beforehand to the Greek and Turkish Governments (see page 16222) and also to the North Atlantic Council. In a statement to the House on June 18, the Prime Minister disclosed that he had intended to announce the new Cyprus plan on the previous day (i.e. June 17) but had agreed to postpone it for 48 hours at the request of M. Spaak (Secretary-General of NATO) " in the belief that this short delay would be of advantage."

Turkish Insistence on Partition of Cyprus.

In a statement on June 19, the Turkish Foreign Minister (M. Zorlu) said that his Government " continues to maintain its conviction and decision that the best possible solution to the Cyprus question is partition." Although it was " impossible to accept any proposal which does not contain this final solution," he nevertheless considered it possible to " fuse together " the principles of partnership and partition in order that " a perfected plan " could emerge. He proposed, therefore, that the final international status of Cyprus should be settled at a conference of the three interested Powers—the United Kingdom, Turkey, and Greece—held " at the highest level." At such a conference the new British plan should not be regarded as " the basic document," although it might be " acceptable as a conference paper."

British Plan rejected by Greek Government and Archbishop Makarios.

The Greek Prime Minister (M. Karamanlis) sent a letter to Mr. Macmillan on June 20 which, although worded in moderate terms, made it clear that Greece would neither accept the new British proposals for Cyprus nor enter into tripartite negotiations as suggested by Mr. Macmillan. After commenting that self-determination for Cyprus was being " put aside for seven years " under the British plan, and stressing that the problem was one " for the people of Cyprus and the United Kingdom to solve," M. Karamanlis commented : " The plan would have been more constructive in proposing a temporary solution on the basis of democratic self-government under British sovereignty, and postponing a settlement on the main issue until a more appropriate time."

Meanwhile, the Governor of Cyprus (Sir Hugh Foot) had sent a letter to Archbishop Makarios on June 9 informing him of the contents of the new British plan and strongly urging him to support it as a means of achieving a peaceful settlement of the Cyprus problem. The Greek Cypriot mayors of Nicosia (Dr. Dervis), Limassol, Larnaka, Famagusta, Kyrenia, and Paphos subsequently visited Athens for discussions with Archbishop Makarios and other Ethnarchy leaders on the British proposals, which were considered at three long conferences on June 18-20. On the latter date Archbishop Makarios sent a letter to Sir Hugh Foot (through the British Embassy in Athens) rejecting the British plan on the grounds that it ran " counter to the fundamental and inalienable right of the people of Cyprus to self-determination " ; that " the idea of partnership which forms the basis of the plan, and which in substance imposes a triple condominium on Cyprus, is unacceptable " ; and that its main provisions would constitutionally sanction the division of the island, thereby " unavoidably leading to antagonism and strife and creating a focus of permanent unrest and a threat to peace in the whole area." After stressing that the Cyprus question was " a matter which concerns the British Government on the one side and the people of Cyprus on the other," the Archbishop said that he was ready to accept a " transitory period of self-government " for Cyprus and was " always ready for bilateral talks between the British Government and the Cypriot people for a genuine democratic constitution of self-government.

In a further letter to Archbishop Makarios on July 5, Sir Hugh Foot said that he could not accept the Archbishop's contention that a plan based on partnership and co-operation would cause unrest. " On the contrary," wrote Sir Hugh, " I most sincerely believe that only by recognizing the obvious fact that there are two separate communities in Cyprus can a new basis for working together in good relations be found. I am sure that acceptance of the two principles of representative government and communal autonomy is the only way to make it possible for the two communities to live and work in peace and harmony together . . . I again point out that, provided violence ceases, progressive steps will be taken to end the emergency and that, as part of this process, your return and that of others excluded from Cyprus will follow. This would open the way for you to take part in discussions on the basis of the constitutional plan."

House of Commons Debate on New Policy.

A debate on the new British proposals for Cyprus was held in the House of Commons on June 26, the principal speakers begin Mr. Lennox-Boyd (Colonial Secretary) and Mr. Macmillan for the Government and Mr. James Callaghan and Mr. Aneurin Bevan for the Opposition.

Mr. Lennox-Boyd, who opened the debate, described the new proposals as " a chance, it may be the last chance, to heal a wound which is weakening and impoverishing the free world." The opportunity had now come " to turn Cyprus from an island of conflict between allies to a land where we can demonstrate to the NATO alliance and the world what friendly co-operation and partnership can achieve."

Previous attempts at international agreement had shown that the positions of Greece and Turkey were too far apart to make it possible to get a settlement on the basis of a detailed agenda. The best way to make progress had therefore seemed to be by private talks between Governments. The British Government had suggested a conference for this purpose, without a fixed agenda and with freedom to discuss without prejudice every suggestion previously put forward, with the aim of finding an acceptable solution to an international problem. The Turkish Government had accepted this suggestion, but the Greek Government, while not rejecting the idea of a conference, preferred that the basic outlines of a solution should first be agreed between the Governments concerned.

When Sir Hugh Foot returned to London in January last to report to the Cabinet, it was still the Government's intention to try through confidential diplomatic exchanges to reach an agreement with Greece and Turkey on a course of action before any statement of policy was made Following the Foreign Secretary's visits to Athens and Ankara [see page 16222] there had been several exchanges through diplomatic channels, and it became clear that it was not possible to secure agreement on a course of action to be pursued in Cyprus.

Meanwhile the situation in the island had been deteriorating rapidly, and it had become urgently necessary to announce a policy and to carry it through. " We therefore abandoned our search for a course of action that had been agreed in advance between the three Governments and sought a means of working out a British plan of action, to be put forward on British responsibility, which would be fair to all and in which all concerned would be invited to co-operate."

At the beginning of May violence had taken on an openly communal form and the people of Cyprus were given grim warning of the horrors of civil war. " Broadcasts from Athens and Ankara, distribution of literature calling openly for the storing of arms and ammunition and blackguarding the members of the other race, the migration of hundreds of Greek and Turkish families from their old homes—all the ugly signs of civil war were there." In this dangerous situation two obvious facts had emerged : (1) Cyprus had been on the brink of civil war which could not be limited to the island; (2) there was no possibility of the Greek and Turkish Governments arriving at an agreed solution by a conference or by diplomatic means. Thus the only hope of avoiding disaster was for the British Government to take a new initiative and to adhere to it with resolution. " That is what we are doing today," Mr. Lennox-Boyd declared.

After a tribute to the security forces, who had " faced a grim situation with courage, patience and good humour," Mr. Lennox-Boyd emphasized that the main foundations of the new plan were partnership and communal autonomy. It had always been the Government's view that the interests of the people of Cyprus should come first, and the new policy did put those interests first. The policy of communal autonomy was essentially one for an undivided Cyprus, but it recognized the fact that there were two separate communities in the island.

The principle of communal autonomy, already widely practised in Cyprus, was a cardinal feature of the new plan. It was in fact one of the few principles on which Greeks and Turks were agreed ; the Greek Cypriots did not interfere in Turkish educational, social, or religious affairs, nor did the Turkish Cypriots interfere in Greek Cypriot communal matters. It was envisaged, moreover, that Cyprus would be associated not only with Britain and the Commonwealth but also with Greece and Turkey, and H.M. Government had asked for the co-operation of both countries " in a joint effort to achieve peace and progress in the island."

After recapitulating the details of the plan, as previously announced by the Prime Minister, Mr. Lennox-Boyd emphasized that there were important matters on which H.M. Government desired the help and advice of the Greek and Turkish Governments. " We want to work out with them in detail a system of representative government and communal autonomy. Many important points remain to be settled, not only the Houses of Representatives and the definition of communal affairs, but the composition of the impartial tribunal to which legislation should be referred, and many other matters."

In conclusion, the Colonial Secretary said that the Government had been greatly encouraged by the understanding shown by Britain's NATO allies. " The discussions of our policy in the NATO Council," he added, " have been of great value in showing us not only the different views of those directly concerned, but also of our other allies who can look on the Cyprus problem with detachment." Britain was ready to enter into constructive discussions with Greece and Turkey at any time: would continue to keep in touch with her other NATO allies ; and would take full advantage of the opportunities for consultation offered by the NATO machinery.

Mr. Callaghan pointed out that although Archbishop Makarios and M. Karamanlis had rejected the idea of partnership, which appeared to form the basis of the Government's plan, they had both made major concessions. The Archbishop had stated that he did not reject a transitory period of self-government, in which connexion Mr. Callaghan observed : " This is the first time the Archbishop has ever put this matter in such terms. He has always in the past insisted on the details of self-determination being worked out before he would consider any measure of self-government If this plan is designed to lead to self-government, there is at least a chink of light here." The Greek Prime Minister, in his letter to Mr. Macmillan, had appeared to acquiesce in setting aside the idea of self-determination for the time being, and had seemed willing to consider " a temporary solution on the basis of democratic self-government under British sovereignty."

Whilst these two major concessions had come from the Greek side, all they had had from the Turkish side was a statement that the idea of partnership was irreconcilable with the idea of partition. Looking at the plan as it stood, it appeared that the Government had gone to the limits in the concessions it had made to the Turkish point of view. Any modifications in working out the details of the plan should, in the Oppposition's view, " be on the side of meeting those who had given up a great deal of the attitude they had adopted previously."

The major criticism that could be made of the plan (Mr. Callaghan continued) was that it emphasized the separation of the two communities in Cyprus, rather than their unity. There was no emphasis on the fact that all were Cypriots, and, in the Opposition's view, the plan could be justified only if it were regarded as a temporary measure to bring the people together and not as a permanent feature designed to keep them separate. " We ought not to base permanent institutions on what might be a temporary and passing quarrel between the two communities."

At present the only place where Greek and Turkish Cypriots met was in the Governor's Council, and the Opposition would like to see a larger body—ideally based on a common roll—which would form a Legislative Assembly for the island. Initially the authority of such a body might be small, and the Greek and Turkish Cypriots might have little to say to each other. Nevertheless, as communal passions subsided, it might at least be possible that the two communities would come together and recognize their common interests. " We ask the Government," said Mr. Callaghan, " to propose the creation of such an organ that would of itself stop the Greeks looking so much to Athens for their protection, and stop the Turks from looking to Ankara. As self-government rose it might be a receptacle into which the reserve powers the Governor now has can be poured, so that it would eventually become a democratic assembly in the fullest sense."

Mr. Callaghan said in conclusion : " We [the Opposition] have responsibility but we have no power. We were not consulted about the drawing-up of the plan. Therefore we do not feel obliged to give it a blanket endorsement . . . But I want to make it clear that the situation in the island is of such a character, and the situation in the Middle East of such a nature, that we would welcome any agreement that the parties to this dispute can come to. We say to all the parties in the dispute : ' It is your duty to go into negotiations. We beg of you to do so to see whether this situation cannot be ended '

" Self-determination, when it comes, must come with the consent of the people of the island. It cannot be imposed by force. In the present circumstances it would be impossible to apply the doctrine of self-determination in an atmosphere of civil war. We have no right to ask British troops to hazard their lives in such an undertaking . . . The Government have the right and the duty to say to the people of Cyprus : ' We want you to proceed, like other territories in the Commonwealth, to determine your own future in due course. Our desire is to create unity, to create the instruments that will enable you to come together and live happily together.' If they make that approach, then I believe the future of the island may be happier than the past has been."

Mr. Aneurin Bevan, like Mr. Callaghan, stressed that every dependency in the Commonwealth had " the right to look forward to full self-government, carrying with it the right to self-determination." Addressing the Government benches, he continued : " You must not be prepared to surrender to violence from one side what you are not prepared to surrender to violence from the other. In recent weeks there has been a strong suspicion that the Government has been influenced in formulating its proposals by threats of increased violence from the Turks. If that is believed by the Greeks, then they will know what to do. If violence does die down, you must not make that an excuse for doing nothing . . . When we have had a cessation of violence in the island, the Colonial Office has sat back. If we do have a period of peace now, I hope we shall take advantage of it and try and get a settlement."

While the Opposition did not commend the proposals (Mr. Bevan continued), it did not advise the Greeks and Turks to reject them out of hand. The proposals themselves were not necessarily the basis for negotiation but " an opening phase of negotiation in the hope of a negotiated settlement of the Cypriot problem." They should be modified to provide for an elected Chamber where Greek and Turkish Cypriots could meet and discuss the common affairs of the island , at a later stage it might become possible for the British Government to " decant " its powers to such a Chamber, so that the final stage would be reached where Cyprus had complete self-government.

Mr. Bevan thought the Government had acted correctly in associating the Greek and Turkish Governments with the new proposals for Cyprus, adding in this connexion : " I would prefer that the representatives from Ankara and Athens should be regarded not as commissioners but as midwives calling the baby nation into existence and, after it has been properly born, going away." After expressing the view that the seven-year period mentioned in the plan should be substantially shortened, he concluded : " I sincerely hope the Government will go away from this debate feeling that the House of Commons is doing its best to try and provide a climate of opinion in which we can make a fresh approach to the solution of the Cypriot problem "

Mr. Macmillan, replying to the debate, praised the restraint which had been shown on all sides of the House. After emphasizing that the Cyprus problem had international as well as internal aspects, he continued . " What we must do now is to face the facts as they are. The facts are, whether you like it or not, that both Greeks and Turks have a fundamental interest in the future of the island as well as Britain. We must concentrate on the future and not on the past. We must try and find a solution which is both realist and practical. It is with this object that we have put forward our policy. It would be foolish to disguise from ourselves that the Turkish and Greek Governments have made clear to us the difficulties which they see in our plan. But we must not lose heart. It would be equally wrong for us not to note the high degree of sympathy and support which the policy has received, not only in this country, but in many other countries both in the Old World and the New. We propose to go forward with the application of our policy in the island, and we hope it will be accepted as a basis for constructive discussion and agreement."

In commending the plan to the Prime Ministers of Greece and Turkey (Mr Macmillan continued) he had offered to meet them separately or together, and had suggested an informal meeting in Rome or Geneva for a personal exchange of views. He added : " Both Mr. Menderes and Mr. Karamanlis have responded to my suggestion in a friendly way, although each has qualified in it his own way. For my part I can only add that I remain ready and anxious to meet anyone or go anywhere if it can in any way help to bring these discussions to a satisfactory solution."

Finally, the Prime Minister stressed that everything that had been said on both sides of the House would be carefully considered and studied as a contribution to the problem. Summing up the Government's attitude, he declared : " We have no special pride of authorship which will make us stick obstinately to this or that detail in the plan. Our purpose is to reach agreement and bring peace."

Mr. Macmillan's Visits to Athens and Ankara.

It was announced from Downing Street on Aug. 6 that Mr. Macmillan was flying immediately to Athens and Ankara for talks with the Prime Ministers of Greece and Turkey, and that Sir Hugh Foot would join him in Athens. Mr. Macmillan left London Airport for Athens on the following day.

In a statement before leaving the airport, Mr. Macmillan recalled that it had always been his wish to have personal discussions with M. Karamanlis and M. Menderes, as he had made clear in his House of Commons statement. For some weeks he had been in correspondence with both Prime Ministers, and they had sent affirmative replies to his suggestion that he should make personal visits to Athens and Ankara for this purpose. He did not know whether his discussions in Greece and Turkey would lead to " detailed, comprehensive agreement on every point or a final agreement on the future of Cyprus," but he hoped for " a broad understanding about the immediate future."

During his two-day visit to Athens (Aug. 8-9) Mr. Macmillan had two meetings with M. Karamanlis ; the talks were also attended by Sir Hugh Foot, M. Averoff (the Greek Foreign Minister), the British Ambassador in Athens (Sir Roger Allen) and the Greek Ambassador in London (M. Seferiades). At the end of the discussions a brief statement was issued saying that " the two Prime Ministers agreed that their conversations had been very useful, although it cannot be said that their views altogether coincide." No official statement was issued as to the points of disagreement, but it was understood that M. Karamanlis had rejected two important details of the British plan : (1) the proposal that Greece and Turkey should be directly associated with the administration of Cyprus, and (2) the proposal that dual nationality should be offered to the Greek and Turkish Cypriots. Sir Hugh Foot had a separate meeting with Archbishop Makarios during his visit to Athens.

From Athens Mr. Macmillan and Sir Hugh Foot flew to Ankara for discussions with M. Menderes and M. Zorlu, held on Aug. 9-10. A brief official communiqué said that there had been " a frank and friendly exchange of views " on the Cyprus question ; that Mr. Macmillan had " explained the nature and purposes " of the new British proposals for Cyprus ; and that M. Menderes had " set out the point of view of his Government."

Before returning to London, Mr. Macmillan paid a visit on Aug. 11 to Cyprus, where he visited the headquarters of Middle East land and air forces, saw British service chiefs, and

visited troops taking part in anti-terrorist operations. He also had separate meetings with leaders of the Greek and Turkish Cypriot communities, the former including Dr. Dervis (mayor of Nicosia) and the latter Dr. Kutchuk.

Modification of British Plan for Cyprus.

Following Mr. Macmillan's return from his visits to Athens and Ankara, several important modifications of the new British plan for Cyprus were announced in London on Aug. 15, of which the following were the most important :

(1) Representatives of the Greek and Turkish Governments would not sit on the Governor's Council, as originally proposed, but would have " direct access " to the Governor. The Greek and Turkish Governments were invited to appoint their representatives " with effect from October 1."

(2) The proposal for dual nationality would be dropped " in view of the complexities of international law."

(3) The setting up of two Houses of Representatives (for the Greek Cypriot and Turkish Cypriot communities) would not preclude the eventual creation of " some form of representative institution serving the interests of the island as a whole."

(4) Pending the elections to the two Houses of Representatives, the Governor would be authorized to set up separate Greek Cypriot and Turkish Cypriot municipal councils where local circumstances made this desirable.

The Government's statement on the modified plan was worded as follows :

" On June 19, 1958, the Prime Minister presented to Parliament a statement of the policy which H.M. Government intend to pursue in regard to the Cyprus problem for a period of seven years. This policy was explained by the Prime Minister to the House of Commons in broad terms . . .

" In the last few days the Prime Minister has had the opportunity of personal meetings in Athens and Ankara with the Prime Ministers of Greece and Turkey, which have enabled him to acquaint himself at first hand with the views of their respective Governments. After most careful consideration of the views expressed to him by the Prime Ministers of Greece and Turkey, and in the light of advice tendered by the Governor of Cyprus regarding the situation in the island, H.M. Government have decided to proceed to give effect to the policy as announced to Parliament in the following manner :

" An Order in Council has already been approved authorizing the preparation of electoral rolls in the island. This is expected to take two or three months. Meanwhile, in accordance with the spirit of the decision whereby the communities are encouraged to order their own communal affairs, the Governor will, where local circumstances make this desirable, authorize the establishment of separate Greek and Turkish Cypriot Municipal Councils.

" When the electoral rolls are complete it will be possible to hold elections for the two Houses of Representatives. The preparations for the elections should involve consultations between the Governor and leaders of the two communities. If, as H.M. Government earnestly hope, violence ceases, this will make possible the return of those at present excluded from the island in order that they may play their part in these electoral processes and in consultations on the details of the system of representative government and communal autonomy set out in the statement of policy. [As pointed out in British newspapers, this would permit the return of Archbishop Makarios to Cyprus].

" As soon as the Houses of Representatives have been elected, they will be asked to elect their representatives to the Governor's Council, which will then become the authoritative body to deal with all matters not specially devolved upon the Houses of Representatives or reserved to the Governor.

" With regard to the representatives of the Greek and Turkish Governments as proposed in the statement of policy, H.M. Government feel on reflection that representatives of other sovereign Powers could not suitably sit as members of the Council under the chairmanship of the Governor. It would be more correct to regard them as specially appointed representatives of their countries with direct access to the Governor and such other facilities as they need to carry out their functions. Accordingly, H.M. Government invite the Governments of Greece and Turkey to appoint their representatives with effect from October 1.

" The establishment of this system of communal Assemblies charged with certain specific functions, and of the Governor's Council charged with more general duties, does not exclude, and should with general goodwill facilitate, the development of some form of representative institution serving the interests of the island as a whole.

" As regards the proposal for dual nationality, it does not appear that there is need for urgent action in this matter. Further inquiries have revealed that any special provision of this kind would require carefully devised legislation in view of the complexities of international law. It is, therefore, wiser to defer action pending the consideration of the legal and other aspects.

" Finally, H.M. Government appeal with confidence for support from all concerned for the two major concepts which underlie their policy. The first is a period of calm and the cessation of violence in the island. The second is the deferring for a period of seven years of any final solution, without prejudice to the future or to the views and aspirations of any of the parties concerned."

Details of the revised plan had been communicated beforehand by Mr. Macmillan to M. Karamanlis and M. Menderes, and by Sir Hugh Foot to Archbishop Makarios.

Turkish Acceptance of Revised Plan.

The Turkish Government's acceptance of the revised British plan was notified on Aug. 25 to Sir James Bowker, H.M. Ambassador in Ankara. In a press statement on the same day, M. Zorlu said that although Turkey had not abandoned her demand for the partition of Cyprus, she regarded the modified British plan as " reconcilable with our thesis." In a subsequent statement to the *Kamutay* (the Turkish Grand National Assembly), M. Zorlu said that the Government had decided to support the revised plan " so as to prove Turkey's good will in the face of the positive efforts made by Britain."

It was announced in Ankara on Sept. 30 that the Turkish Government had appointed its Consul-General in Nicosia (M. Burhan Ishin) as its representative in Cyprus, acting in an advisory capacity to the Governor in accordance with the revised British plan.

Greek Rejection of Revised Plan. - Greek Premier's Letter to Mr. Macmillan.

In a letter to Mr. Macmillan on Aug. 19, M. Karamanlis stated that the Greek Government was " unable to co-operate in the application " of the revised British plan and " does not intend to appoint a representative to co-operate with the Governor of Cyprus."

The Greek Prime Minister said that his Government were opposed to the revised plan on the following grounds :

(1) No " third Governments " should be involved in the administration of Cyprus, as he (M. Karamanlis) had pointed out to Mr. Macmillan during their discussions in Athens. Nevertheless, the revised British plan continued to make provision for two representatives [of the Greek and Turkish Governments] " in capacities which render clear their interference in the administration." The appointment of such representatives would " create everyday complications, constant discord, and rivalry," and this in turn would " aggravate relations not only between the two sections of the population but also between the two allied countries." Above all, " the very presence of two representatives within the administration will engender conditions which will in time give rise to claims for permanent rights "

(2) Instead of two separate Houses of Representatives as proposed in the British plan, a single Legislative Assembly should be set up in Cyprus to deal with all matters except those reserved to the Governor. However, not only were the two Houses to be retained under the revised plan, but the possibility of a single Assembly had only been " vaguely mentioned." M. Karamanlis emphasized that the Greek Government regarded a single Assembly as " the basic element of the whole system."

(3) No steps had been taken to make the numerical composition of the Governor's Council correspond with that of the population, as he had urged upon Mr. Macmillan during their talks in Athens.

(4) The proposal for separate Greek and Turkish Cypriot municipal councils had introduced " a new element which would disrupt the unity of the population " and lead to " dangerous complications."

In view of these objections (M. Karamanlis continued) the Greek Government was unable to co-operate in applying the revised plan, nor could it appoint a representative to serve in Cyprus. After commenting that Greece had " never asked to participate in the exercise of sovereignty " in Cyprus, M. Karamanlis added that it was for the Greek Cypriots themselves to decide whether or not they would co-operate in applying the plan.

Finally, the Greek Prime Minister said that " the plan put forward by the British Government, without the modifications suggested by the Greek Government, will not serve the purposes which you [Mr. Macmillan] have proclaimed—pacification of the island, and its prosperity." He added : " We therefore face future developments with a clear conscience, since we have done everything possible to render them peaceful and constructive. Since agreement for a provisional solution has been frustrated, Greece will continue with all legitimate means her efforts towards the freedom of the people of Cyprus."

M. Karamanlis stated on Sept. 7 that he had informed all allied Governments of Greece's decision to use " all political and diplomatic means " in preventing the application of the new British plan for Cyprus. He asserted that the British plan, by associating Turkey with the government of the island, constituted a " flagrant violation " of the Lausanne Treaty (under which Turkey renounced all rights of sovereignty over the island).

Archbishop Makarios rejects British Plan.

As stated above, the revised plan for Cyprus had been communicated in advance to Archbishop Makarios by Sir Hugh Foot. In his letter to the Archbishop, Sir Hugh urged

him to support the plan as "perhaps the last opportunity of making a fresh start in the endeavour to bring peace and progress to Cyprus."

"I realize from the discussions I have had with you," wrote Sir Hugh, "that there are aspects of the new policy with which you disagree, but I most earnestly urge you not to throw away this opportunity of working together in a spirit of compromise and co-operation. If this chance is not seized at once, I can foresee nothing but continuing misery for Cyprus. But if we all now decide to sink the differences of the past and work together in mutual understanding and confidence, I feel sure that we can achieve a period of good order and good sense which can save the island from further conflict and lay the foundations for a final and just settlement in due course. A great responsibility rests on us all to put first the interests of the people of the island, and to that overriding purpose I am pledged."

Despite this appeal Archbishop Makarios uncompromisingly rejected the revised plan, adding that its implementation would involve "grave consequences" for which responsibility would "rest on the British Government." The Archbishop's reply to Sir Hugh Foot (Aug. 16) was worded as follows:

"I have carefully studied the statement of the Prime Minister of Britain, a copy of which you kindly sent me in advance, as well as your accompanying message. I am sorry to see that the statement, apart from slight modifications, is in effect a restatement of the policy announced on June 19, 1958, which has already been rejected. I am also painfully astonished to note that it is proposed to proceed with the imposition of a plan unacceptable to the large majority of the Cypriot people.

"It should be made abundantly clear that the Greek people of Cyprus can never accept a plan which disregards their basic democratic rights and denies them both freedom and peace. Freedom is frustrated in a plan which imposes outside Governments over the heads of the people of Cyprus, and which breaks up their unity by means of a Constitution of division calculated to prejudice the final issue. Peace would be lost for the island by a regime permanently establishing differences and divisions, thereby setting the stage not for unity and co-operation, but for accentuated antagonism and strife, with wider repercussions.

"It is our earnest wish to see conditions of peace and harmony return to the island. Your plea, therefore, for the sinking of differences and for mutual understanding and confidence meets with my wholehearted response. May I, however, point out the wide disparity between the positive nature of your verbal plea for co-operation, and the negative objectives of a divisive Constitution based on mistrust and separation, which you in practice support.

"In these circumstances I feel I must earnestly emphasize the unwisdom of a policy of enforcing a plan against the will of the people, and the grave consequences involved, for which responsibility rests on the British Goverment.

"Finally, I must place on record our profound disappointment that the moderation we have shown in a spirit of good will and compromise, in order to reach agreement upon a transitory period of self-government, has met with no response whatsoever from the British Government, whose policy has proved to be devoid of all sincerity of purpose.

"The people of Cyprus will not accept any arbitrary and unilateral decision and are more than ever intent on asserting their right to self-determination and achieving freedom"

At a meeting of Greek Cypriot mayors on Aug. 23 it was unanimously decided to reject Britain's "partnership" plan and to oppose its implementation "by every means."

Archbishop Makarios's Proposal for Independent Cyprus under U.N. Guarantee.

An important modification of the views previously held by Archbishop Makarios was disclosed in an interview given by the Archbishop on Sept. 22 to Mrs. Barbara Castle, M.P., vice-chairman of the Labour Party, who was on a private visit to Athens. In answer to a number of questions by Mrs. Castle, he stated (1) that after a fixed period of self-government Cyprus should become an independent State "linked neither to Greece nor to Turkey" [this constituted an apparent abandonment of the Archbishop's previous demand for *enosis*]; (2) that the independent status of Cyprus should not be changed "either by union with Greece, by partition, or by any other way," unless such a change were approved by the United Nations; and (3) that the independence of Cyprus should be guaranteed by the United Nations. The Archbishop added that "membership of the British Commonwealth would not be incompatible with the status I propose."

Archbishop Makarios said that the arrival of a Turkish representative in Cyprus would meet with "such strong opposition that a very dangerous situation will arise, with far-reaching repercussions affecting not only Cyprus but the NATO alliance and the security of the whole area." The British plan "to give the Turkish Government sovereign rights in Cyprus, either through partition or by some other means," would make a solution of the Cyprus question impossible. After reiterating that the problem of Cyprus was "one for discussion between the Cypriot people and the British Government, he added: "The British Government have unnecessarily complicated the situation and turned it into a dispute between the Greek and Turkish Governments in which they are trying to pose as arbiter. But in our view it is wrong to involve third parties in this way. That is why we would oppose the arrival of a representative of the Greek Government just as much as of the Turkish Government."

After making the above-mentioned proposals for an independent Cyprus under U.N. guarantee, and saying that the Turkish Cypriot community would have full safeguards under his plan, the Archbishop said that the British Government should "sit down with representatives of the Cypriot people to work out a constitution for self-government. When this has been drawn up, it should operate for an agreed period, after which the status of independence would come into effect."

Asked what would be the strategic consequences of his plan, the Archbishop replied: "I am sure that an independent and peaceful Cyprus would make a better contribution to the defence of freedom than can a Cyprus torn by colonial or civil war."

After an emergency meeting of the Greek Cabinet, M. Karamanlis announced on Sept. 29 that his Government would accept independence for Cyprus along the lines proposed by Archbishop Makarios. Mr. Macmillan, however, said in a letter to the Greek Prime Minister on Sept. 30 that the Archbishop's proposal "falls outside the scope of the immediate problem of setting up interim arrangements for restoring order and developing representative institutions," although it could "of course remain open for consideration along with any other proposal for a final settlement."

The National Executive Committee of the British Labour Party issued a statement on Sept. 26 calling upon the Government to suspend the implementation of its plan for Cyprus by postponing the arrival in the island of the Turkish representative. The Archbishop's statement in his interview to Mrs. Castle held out new hope of a settlement by agreement, and negotiations should accordingly be reopened "with representatives of the Cypriot people," without whose consent no lasting settlement was possible. As the Government's plan had already been rejected by the "overwhelming majority of the island's inhabitants," any attempt to impose it would be "unwise and dangerous" and would place the British forces in Cyprus in an "intolerable position." If negotiations were to succeed, they must remove Greek fears of partition and Turkish fears that the Turkish minority might be governed from Athens; if this were done, progress could be made toward self-government with full protection of minority rights. The National Executive also made a renewed appeal to all concerned to refrain from further acts of violence.

The Archbishop's proposals for an independent Cyprus under U.N. guarantee, as set forth in his interview with Mrs. Castle, were formally conveyed to Mr. Macmillan through the British Embassy in Athens.

"Appointed Day" in Cyprus. - Turkish Representative takes up Post. - Archbishop Makarios's Call for Greek Cypriot Resistance to British Plan.

The seven-year "partnership" plan for Cyprus came into operation on Oct. 1—the "appointed day" under the revised plan announced by Mr. Macmillan on Aug. 15. The Turkish Consul-General in Cyprus (M. Burhan Ishin) officially assumed his duties as Turkish representative in the island on that date and made a formal call on Sir Hugh Foot in this capacity. While the "appointed day" was observed as a holiday by the Turkish Cypriot community, the Greek Cypriots staged a general strike throughout the island on Eoka orders, and there were a number of demonstrations involving clashes with the security forces in several areas.

Archbishop Makarios sent a message to the Greek Cypriots on Oct. 3 urging them to "react vigorously" against the implementation of the British plan, which he described as "the outcome of unlawful Anglo-Turkish collusion." He called for "unity as one man, regardless of ideological affiliations," at a moment when "not only the historical unity but also the very survival of our race in Cyprus is endangered."

A three-man commission to examine the question of separate Turkish municipalities, as envisaged under the British plan, arrived in Cyprus in mid-October. It comprised three Colonial Office officials, all of whom had previously served in the Cyprus administration—Mr. J. B. Surridge (chairman of the commission), Mr. C. J. Thomas and Mr. C. Mace.

Turkish Cypriot members of the municipal councils had already resigned in June 1957 in protest at what they alleged to be "complete disregard" of Turkish communal interests by the Greek Cypriot councillors (see page 15653, first column). A year later—i.e. in June 1958—the Turkish communal leaders in Nicosia and Limassol set up their own municipal councils without waiting for permission from the Cyprus Government.

NATO Intervention in Cyprus Dispute. - Mr. Spaak's Proposal for Round-Table Conference on Cyprus.

In an attempt to secure an agreement acceptable to all three NATO allies involved in the Cyprus question, M. Spaak proposed the holding of a conference, under his own chairmanship, which would be attended by representatives of the British, Greek, and Turkish Governments and also by Greek and Turkish Cypriot leaders. He flew to Athens on Sept. 23 to discuss this matter with M. Karamanlis and reported on the following day to the North Atlantic Council, which considered the Cyprus question at a number of meetings during the next three weeks. On Oct. 16-17 M. Averoff visited Paris for discussions with M. Spaak and the French Foreign Minister, M. Couve de Murville, on which no statement was issued. The North Atlantic Council had a further meeting on the latter date, after which an official spokesman said that "encouraging progress" was being made towards a round-table conference on Cyprus and that the delegates were "referring back to their Governments."

Greco-Turkish Dissensions in NATO.

Prior to the developments described above, the Greek Government has announced on June 15 its intention to cease co-operation with Turkey within the North Atlantic Treaty framework; it was announced in Athens that all Greek officers and their families had accordingly been withdrawn from Izmir, the H.Q. of Allied Land Forces, South-East Europe.

The Greek Government's action—which was not notified beforehand to NATO or any of its member-nations—followed closely upon violent communal riots in Cyprus in which 13 Greek Cypriots were killed by Turkish mobs. M. Averoff said that the decision to cease NATO co-operation with Turkey had been prompted by "grave considerations resulting from repeated Turkish provocations."

In a statement to the Greek Parliament on June 24, M. Averoff reasserted Greece's loyalty to the NATO alliance but said that the tension between Greece and Turkey might "pose in the very near future the question of the redeployment of NATO commands in South-East Europe." [Earlier reports from Athens had suggested that Greece might ask NATO to establish two separate commands in South-East Europe for the Greek and Turkish forces, instead of the single Greco-Turkish command at Izmir.] While reiterating that Greece's objective remained self-determination for Cyprus, M. Averoff said that she was prepared "to help in breaking the present dangerous deadlock" by postponing a settlement of this objective, "provided democratic self-government is introduced in the island." If no agreed solution were found, Greece would appeal to the United Nations.—(Times - Daily Telegraph - Manchester Guardian - Hellenic News Agency, Athens - Turkish Embassy Press Department, London)

Note. Internal developments in Cyprus in recent months will be described in a subsequent issue. (*Ed. K.C.A.*)

A. NETHERLANDS - UNITED KINGDOM. — Formation of Anglo-Dutch Trade Council.

An Anglo-Dutch Trade Council, formed jointly by the Federation of British Industries and the Association of British Chambers of Commerce, was established in The Hague on Sept. 18 under the joint chairmanship of Mr. Duncan Oppenheim, chairman of the British-American Tobacco Company, and Dr. Paul Rykens, lately chairman of Unilever N.V. of Holland. Consisting of 20 leading British and Dutch businessmen, it will promote trade between the two countries, aid U.K. exporters, and make representations to the Netherlands Government on trade matters where desirable.

Although there has been a Dutch Chamber of Commerce in London since 1890, there had hitherto been no similar British organization in the Netherlands despite the fact that Holland is Britain's sixth largest export market—coming after four Commonwealth countries and the United States. Moreover, Holland is Britain's biggest customer in Europe, having bought about £120,000,000 worth of British goods in 1957.

(Bradford Chamber of Commerce Journal)

B. CHINA. — First Nuclear Reactor.

The first nuclear reactor in Communist China was put into operation in Peking on Sept. 27. Built with the assistance of Soviet specialists, it comprises a 10,000-kilowatt heavy water research reactor and a 20,000,000 electron-volt cyclotron, and will be used for the production of radioactive isotopes and other industrial and medical applications.—(New York Times)

C. UNITED ARAB REPUBLIC. — New Cabinet. - Resignation of M. Sabry Assali. - Regional Executive Councils for Egypt and Syria.

President Nasser appointed on Oct. 8 a new Central Cabinet for the United Arab Republic, and also two Regional Executive Councils—each with its own president—for Egypt and Syria. This change, which increased the number of Ministers from 34 to 50, marked a return to the system envisaged in the original proposals for the formation of the U.A.R. put forward on Feb. 5 (see 16005 A), which were subsequently abandoned in favour of a system of Ministries with separate regional heads (see 16085 A). According to the Egyptian press, the reorganization was aimed at making the two regions—Egypt and Syria—work at "the same pace" and at bringing the efficiency of governmental machinery in Damascus up to that in Cairo.

At the same time the number of Vice-Presidents was reduced from four to three—M. Abdul Latif el-Boghdadi, Field-Marshal Hakim Amer, and M. Akram Hourani—following the resignation of M. Sabry Assali (see below). The membership of the new Central Cabinet—comprising 14 Egyptians and seven Syrians—was as follows, former nationalities being shown in parentheses (E.—Egyptian; S.—Syrian):

M. Abdel Latif el-Boghdadi (E.)	Vice-President and Planning.
Field-Marshal Abdel Hakim Amer (E.)	Vice-President and War.
M. Akram Hourani (S.)	Vice-President and Justice.
M. Zakaria Mohieddin (E.)	Interior.
M. Hussein Shafei (E.)	Social Affairs and Labour.
M. Kamaleddin Hussein (E.)	Education.
Dr. Mahmoud Fawzi (E.)	Foreign Affairs.
M. Hassan Jubarrah (S.)	Treasury.
M. Abdel Moneim el-Kaissouny (E.)	Economy.
M. Ahmed Abdul Sharbassi (E.)	Public Works.
M. Ahmed Hassan Bakoury (E.)	Religious Foundations (*Wakfs*).
M. Fakhar el-Kayali (S.)	Minister of State.
M. Salah Bitar (S.)	Culture and National Guidance.
Wing-Commander Ali Sabry (E.)	Minister of State for Presidential Affairs.
Colonel Amin Nafouri (S.)	Communications.
M. Bashir el-Atba (S.)	Health.
Major Ahmed Abdel Karim (S.)	Rural and Municipal Affairs.
Dr. Aziz Sidky (E.)	Industry.
M. Kamal Ramzi Stino (E.)	Supply.
Dr. Said Marei (E.)	Agriculture and Land Reform.
M. Kamaleddin Rifaat (E.)	Minister of State.

The membership of the two Regional Executive Councils was as follows:

Egypt. Dr. Nureddin Tarraf—President; M. Ahmad Husni—Justice; M. Mohammed Abu Nosseir—Rural and Municipal Affairs; Dr. Mustafa Khalil—Communications; M. Hassan Abbas Zaki—Economy; M. Fathi Rizk—Industry; M. Sawat Okasha—Culture and Guidance; M. Tewfik Abdel Fattah—Social Affairs and Labour; M. Abbas Radwan—Interior; M. Ahmed Elmahrouki—Agriculture; M. Hassan Boghdadi—Land Reform; M. Musa Arafa—Public Works; M. Mohammed Nassar—Health; M. Hassan Salaeddin—Finance; M. Ahmed Naguib Hashem—Education.

Syria. M. Nureddin Kuhala—President and Planning; M. Abdel Wahab Homad—Finance; M. Khalil Kallas—Economy; Major Mustafa Hamdun—Land Reform; Colonel Abdel Hamid Sarraj—Interior; M. Mihad Ksaem—Justice; M. Ahmed Haj-Yunis—Agriculture; M. Shawkhat Kanawati—Health; M. Abdel Ghani Kannout—Social Affairs and Labour; M. Mohammed Alem—Communications; M. Teima Awad Allah—Rural and Municipal Affairs; M. Riad Malki—Culture and Guidance; M. Anjad Tarabulsi—Education; M. Ouajih Sammen—Industry.

M. Sabry Assali, one of the four Vice-Presidents on the formation of the U.A.R., submitted his resignation on Oct. 6.

The Cairo newspaper *Al Akhbar* had previously published extracts from documents (said to have been produced during the trial in Baghdad of Dr. Jamali, the former Iraqi Premier) which purported to show that in 1954 M. Assali had taken part in a plot to merge Syria with Iraq under the late King Faisal, and that he had accepted money from the Iraqi Crown's secret fund for this purpose. M. Assali denied these allegations, accused Syrian newspapers of conducting a personal campaign against him, and pointed out that the plan for Syrian-Iraqi union was an old one which had been discussed by all the Syrian parties.

M. Assali was the last Prime Minister of Syria before the union of that country and Egypt as the United Arab Republic.

A. UNITED STATES. — The Little Rock Case. - Supreme Court's Judgment.

The unanimous judgment of the U.S. Supreme Court rejecting any delay of integration at the Little Rock Central High School was read by Chief Justice Earl Warren on Sept. 29, and is summarized below.

"This case," the judgment began, "raises questions of the highest importance to the maintenance of the Federal system of government. It necessarily involves a claim by the Governor and Legislature of a State that there is no duty on State officials to obey Federal Court orders resting on this Court's considered interpretation of the U.S. Constitution." After reviewing the history of the case, and specifically its decision of May 17, 1954 [see 13593 A] that enforced racial segregation in public schools was a denial of the equal protection of the laws guaranteed in the 14th Amendment to the Constitution, the Supreme Court recapitulated its decree of May 31, 1955, in which it had enunciated the principles for implementing its 1954 decision [see 14244 A].

In this connexion it was recalled that the Supreme Court had recognized that "good faith compliance" with the principles of the 1954 decision might in some situations "call for elimination of a variety of obstacles" in carrying out the necessary changes. In the 1955 decree, however, it had been expressly stated that "the vitality of these constitutional principles [i.e. those set forth in the 1954 decision] cannot be allowed to yield simply because of disagreement with them"; and that "while giving weight to public and private considerations," the Courts would require that "a prompt and reasonable start" should be made "toward full compliance" with the 1954 ruling. Once such a start had been made, the Courts might find that additional time was necessary to carry out the ruling in an effective manner; but in such cases the school authorities would have to establish that such time was necessary in the public interest and was consistent with "good faith compliance" at the earliest practicable date.

The judgment continued: "Under such circumstances, the District Courts were directed to require 'a prompt and reasonable start toward full compliance,' and to take such action as was necessary to bring about the end of racial segregation in public schools 'with all deliberate speed.' Of course, in many locations, obedience to the duty of desegregation would require the immediate general admission of Negro children, otherwise qualified as students for their appropriate classes, at particular schools. On the other hand, a District Court, after analysis of the relevant factors (which, of course, excludes hostility to racial desegregation), might conclude that justification existed for not requiring the present non-segregated admission of all qualified Negro children. In such circumstances, however, the Court should scrutinize the programme of the school authorities to make sure that they had developed arrangements directed toward the earliest practicable completion of desegregation, and had taken appropriate steps to put their programme into effective operation. It was made plain that delay in any guise in order to deny the constitutional rights of Negro children could not be countenanced, and that only a prompt start, diligently and earnestly pursued, to eliminate racial segregation from public schools could constitute good-faith compliance. State authorities were thus duty bound to devote every effort toward initiating desegregation and bringing about the elimination of racial discrimination in the public school system."

Reviewing the events at Little Rock from 1955 to date, the judgment said that "while the School Board was going forward with its preparation for desegregating the Little Rock school system, other State authorities, in contrast, were actively pursuing a programme "designed to perpetuate in Arkansas the system of racial segregation which this Court had held violated the 14th Amendment." The Supreme Court went on to say that it had accepted "without reservation" the position of the School Board, the Superintendent of Schools, and their counsel that they had "displayed entire good faith in the conduct of these proceedings and in dealing with the unfortunate and distressing sequence of events which has been outlined."

In accepting the findings of the District Court as to the conditions at Central High School during the 1957-58 school year, the Supreme Court declared: "The significance of these findings, however, is to be considered in the light of the fact, indisputably revealed by the record before us, that the conditions they depict are directly traceable to the actions of legislators and executive officials of the State of Arkansas, taken in their official capacities, which reflect their own determination to resist this Court's decision in the Brown case [i.e. the decision of May 17, 1954] and which have brought about violent resistance to that decision in Arkansas . . . One may well sympathize with the position of the Board in the face of the frustrating conditions which have confronted it; but, regardless of the Board's good faith, the actions of the other State agencies responsible for those conditions compel us to reject the Board's legal position.

"The constitutional rights of respondents are not to be sacrificed or yielded to the violence and disorder which have followed upon the actions of the Governor and the Legislature . . . Law and order are not to be preserved by depriving Negro children of their constitutional rights. The record before us clearly establishes that the growth of the Board's difficulties to a magnitude beyond its unaided power to control is the product of State action. Those difficulties, as counsel for the Board conceded on the oral argument in this Court, can also be brought under control by State action. The controlling legal principles are plain. The command of the 14th Amendment is that no 'State' shall deny to any person within its jurisdiction the equal protection of the laws."

Quoting from a number of other decisions, the judgment went on: "A State acts by its legislative, executive, or judicial authorities. It can act in no other way. The Constitutional provision, therefore, must mean that no agency of the State, or of the officers or agents by whom its powers are exerted, shall deny to any person within its jurisdiction the equal protection of the laws. Whoever, by virtue of public position under a State Government, denies or takes away the equal protection of the laws, violates the Constitutional inhibition; and as he acts in the name and for the State, and is clothed with the State's power, his act is that of the State. This must be so, or the Constitutional prohibition has no meaning . . . In short, the Constitutional right of children not to be discriminated against in school admission on grounds of race or colour, declared by this Court in the Brown case, can neither be nullified openly and directly by State legislators or State executive or judicial officers, nor nullified indirectly by them through an evasive scheme for segregation, whether attempted 'ingeniously' or ingenuously.'"

Dealing with the contention of Governor Faubus and the Arkansas Legislature that they were not bound by the Supreme Court's earlier decisions of 1954 and 1955, the judgment declared: "It is necessary only to recall some basic Constitutional propositions which are settled doctrines. Article VI of the Constitution makes the Constitution the 'supreme law of the land.' In 1803, Chief Justice Marshall, speaking for a unanimous Court, referring to the Constitution as 'the fundamental and paramount law of the nation' [and] declared that 'it is emphatically the province and duty of the judicial department to say what the law is. This decision declared the basic principle that the Federal judiciary is supreme in the exposition of the law of the Constitution, and that principle has ever since been respected by this Court and the country as a permanent and indispensable feature of our Constitutional system. It follows that the interpretation of the 14th Amendment enunciated by this Court in the Brown case is the supreme law of the land, and Article VI of the Constitution makes it of binding effect on the States . . ."

After quoting Supreme Court decisions laying down the supremacy of the Federal Constitution, the judgment continued: "It is, of course, quite true that the responsibility for public education is primarily the concern of the States, but it is equally true that such responsibilities, like all other State activity, must be exercised consistently with Federal Constitutional requirements as they apply to State action. The Constitution created a Government dedicated to equal justice under law. The 14th Amendment embodied and emphasized that ideal. State support of segregated schools through any arrangement, management, funds or property cannot be squared with the Amendment's command . . ."

The judgment concluded: "The basic decision in 'Brown' was unanimously reached by this Court only after the case had been briefed and twice argued and the issues had been given most serious consideration. Since the first Brown opinion three new Justices have come to the Court. They are at one with the Justices still on the Court who participated in that basic decision as to its correctness, and that decision is now unanimously reaffirmed. The principles announced in that decision, and the obedience of the States to them, according to the command of the Constitution, are indispensable for the protection of the freedoms guaranteed by our fundamental charter for all of us . . ."

In addition to the Chief Justice, the other members of the Supreme Court concurring in the decision were Justices Black, Frankfurter, Douglas, Burton, Clark, Harlan, Brennan, and Whittaker.—(New York Times - New York Herald Tribune)

B. UNITED KINGDOM. — Exchange Control.

The Chancellor of the Exchequer announced on Oct. 23 that the sending of cash gifts of up to £10 in each calendar year to persons resident abroad would be permitted as from Nov. 10. Hitherto *bona fide* cash gifts could only be sent to persons resident in the sterling area and Scandinavia.

The Treasury announced on Oct. 24 that travel allowances would remain unchanged for the year beginning Nov. 1, 1958—i.e. £100 basic travel allowance, £70 for children under 12, and allowances of £35 and £15 for cars and motor-cycles respectively. For travel in Norway, Sweden, Denmark, Greenland, and the Faroes "reasonable" amounts of currency would be allowed, and in all cases travellers could pay in sterling outside the basic allowance for their own journey, by any regular means of transport, throughout the world.

The amount of sterling notes which could be taken out of the country remained unchanged at £10.

C. NETHERLANDS. — Cabinet Appointment.

Dr. van Aartsen was appointed Minister for Transport and Waterways on Oct. 23 in succession to Mr. J. Algera, who had resigned for health reasons. Like his predecessor, Dr. van Aartsen (49) is a member of the Anti-Revolutionary Party. (Netherlands News Agency) **(Prev. rep. Cabinet, 15980 F.)**

OCTOBER 25—NOVEMBER 1, 1958

A. PAKISTAN. — Constitution abrogated by President Mirza. - Dismissal of Central and Provincial Governments and Assemblies. - Imposition of Martial Law. - General Ayub Khan becomes Prime Minister and President. - Resignation of President Mirza. - Measures against Corruption and Black-Marketeering. - Arrests of Party Leaders. - Abolition of Political Parties.

By a proclamation issued on Oct. 7, President Mirza of Pakistan abrogated the Constitution, dismissed the Central and Provincial Governments, dissolved the National and Provincial Assemblies, abolished all political parties, proclaimed martial law, and appointed General Ayub Khan (C.-in-C. of the Army) as Chief Martial Law Administrator. The immediate occasion of his action was a crisis inside Mr. Firoz Khan Noon's Cabinet, from which six Awami League Ministers had resigned a few hours previously, only five days after they had taken office. Both the wording of the proclamation and subsequent statements by President Mirza and General Ayub, however, made it clear that the President's action, in which he was fully supported by the Army, was motivated by his conviction that the political parties were responsible for the "chaotic internal situation" and would "rig the elections for their own ends." Recent developments which apparently brought matters to a head included—in addition to party disputes over posts in the Central Government—riotous scenes in the East Pakistan Assembly between Sept. 20-23, in which the Deputy Speaker was fatally injured, and violent agitation by the Moslem League, whose para-military organization was suppressed by the Government on Sept. 20.

A new non-party Government was formed by General Ayub Khan, who also assumed the Presidency of Pakistan following the resignation of President Iskander Mirza. Details of these developments are given below under cross-headings.

The Cabinet Crisis.

In order to widen the basis of his Government, Mr. Noon had discussions during September with Mr. H. S. Suhrawardy and Mr. Hamidul Huq Choudhury, the respective leaders of the Awami League and the *Krishak Sramik* party. Mr. Choudhury was sworn in as a Minister on Sept. 16, and acted as Finance Minister during the absence of Syed Amjad Ali, who was attending the Commonwealth economic conference in Montreal (see 16443 A.). Although Mr. Suhrawardy refused to join the Government himself, three members of the Awami League (Mr. Zahiruddin, Mr. Dildar Ahmad, and Mr. Nuru Rehman) took office as Ministers on Oct. 2, and three others (Mr. Peter Paul Gomez, Mr. Abdul Rehman Khan, and Mr. Adiuddin) as Ministers of State. Two Republicans, Chaudhry Abdus Salam and Sardar Mohammed Akbar Khan Buqti, had previously been sworn in as Ministers of State on Sept. 20. These changes increased the size of the Government to 17 Ministers and nine Ministers of State (eight Ministers and four Ministers of State from West Pakistan, and nine Ministers and five Ministers of State from East Pakistan), out of a National Assembly of 80 members.

The reallocation of portfolios in the enlarged Cabinet gave rise to intense controversy. On returning to Karachi on Oct. 1 Syed Amjad Ali refused to relinquish the Finance Ministry in Mr. Choudhury's favour, and threatened to leave the Republican Party with 10 other deputies, including a number of Ministers. At midday on Oct. 7 Mr. Noon announced a Cabinet reshuffle whereby he himself relinquished the Foreign Ministry to Sardar Abdur Rashid (formerly Minister of Commerce and Industries); Syed Amjad Ali retained the Finance Ministry; Mr. Choudhury became Minister of Commerce; and Mr. Zahiruddin, Mr. Ahmad, and Mr. Rehman became Ministers of Communications, Irrigation and Power, and Education respectively. Immediately these appointments were announced, the Awami League decided to recall its six representatives in the Government as a protest against the allocation of portfolios; it stated that Mr. Noon was facing grave difficulties inside the Republican Party over the distribution of portfolios between East and West Pakistan, and that these difficulties were "of such a nature that the very purpose of the Awami League's entry into the Cabinet—to ensure the holding of free and fair elections on the appointed date of Feb. 15—may be thwarted." Mr. Noon subsequently reshuffled his Cabinet a second time to exclude the Awami League representatives.

Abrogation of Constitution. - Proclamation of Martial Law.

President Mirza issued his proclamation in the late evening of Oct. 7, a few hours after the crisis inside the Cabinet. The proclamation, in which he explained the reasons for his decision, bitterly attacked the political parties, which were accused of corruption, complete unscrupulousness in their struggle for power, and an irresponsible attitude towards the country's foreign policy.

"For the last two years," President Mirza stated, "I have been watching with the deepest anxiety the ruthless struggle for power, the corruption, the shameful exploitation of our simple, honest, patriotic, and industrious masses, the lack of decorum, and the prostitution of Islam for political ends . . . These despicable activities have led to a dictatorship of the lowest order; adventurers and exploiters have flourished to the detriment of the masses, and are getting richer by their nefarious practices." No serious attempt had been made to tackle the food crisis; the Agriculture and Land Administration had been made "a handmaiden of politics"; and there was smuggling of food, medicines, and other necessities. The import of food had been a constant drain on foreign exchange, and much-needed internal development projects had had to be curtailed.

The proclamation continued: "Some of our politicians have been talking of bloody revolution. Another type of adventurer thinks fit to go to foreign countries and attempt a direct alignment with them, which can only be described as high treason." [This passage referred to Khan Abdul Qaiyum Khan and Maulana Bhashani—see below.] "The disgraceful scene enacted recently in the East Pakistan Assembly is known to all . . . You do not raise the prestige of your country by beating the Speaker, killing the Deputy Speaker, and desecrating the national flag. The mentality of the political parties has sunk so low that I am unable any longer to believe that elections will improve the present chaotic internal situation and enable us to form a strong and stable Government capable of dealing with innumerable problems. We cannot get men from the moon. The same group who have brought Pakistan to the verge of ruination will rig elections for their own ends . . . Judging by their shifting loyalties and ceaseless and unscrupulous scramble for office, the elections will be neither free nor fair, and will be more likely to lead ultimately to a really bloody revolution than to solve the country's problems.

"Pakistan's foreign policy is subjected to unintelligent and irresponsible criticism for selfish and unpatriotic motives, often by the very people responsible for it," the proclamation continued. "We desire to have friendly relations with all nations, but political adventurers try their best to create bad blood and misunderstanding between us and countries like the U.S.S.R., the United Arab Republic, and the People's Republic of China. Against India they scream for war, knowing full well that they will be nowhere near the firing line. In no other country in the world do political parties treat foreign policy in such a fashion as in Pakistan. To dispel the confusion so caused, I categorically reiterate that we shall continue to follow the policy which our interests and geography demand, that we shall honour all international commitments which . . . we have undertaken to safeguard the security of Pakistan and, as a peace-loving nation, to play our part in averting the danger of war in this troubled world.

"My appraisal of the internal situation has led me to believe that the vast majority of the people no longer have any confidence in the present system of government," President Mirza declared. "They are getting more and more disillusioned and disappointed, and are becoming dangerously resentful of the manner in which they are being exploited. Their resentment is justifiable, as the leaders have failed to prove themselves worthy of the confidence the masses have reposed in them. The Constitution is sacred, but more sacred is the country's welfare and the happiness of the people. The Constitution is seriously threatened by the ruthlessness of traitors and political adventurers. The Constitution is so full of dangerous compromises that Pakistan will disintegrate internally if the inherent malaise is not removed. To rectify this, the country must first be brought to sanity by a peaceful revolution. Then it is my intention to collect a number of patriotic persons to examine our problems in the political field and to devise a Constitution more suitable to the genius of the Moslem people. When it is ready, and at the appropriate time, it will be submitted to a referendum.

"I have therefore decided that:

(*a*) The Constitution of March 23, 1956, will be abrogated.

(*b*) The Central and Provincial Governments will be dismissed with immediate effect.

(*c*) The National Parliament and Provincial Assemblies will be dissolved.

(*d*) All political parties will be abolished.

(*e*) Until alternative arrangements are made, Pakistan will come under martial law. I hereby appoint General Mohammed Ayub Khan, Commander-in-Chief, Pakistan Army, as Chief Martial Law Administrator, and place all the armed forces of Pakistan under his command.

"The present action has been taken with the utmost regret," the proclamation concluded, "but I have had to do it in the interests of the country and the masses—finer men than whom it is difficult to imagine. To patriots and law-abiding citizens, I promise you will be happier and freer. The political adventurers, the smugglers, the black-marketeers, the hoarders, will be unhappy, and their activities will be severely restricted. As for the traitors, they had better flee the country if they can while the going is good . . ."

General Ayub, in a broadcast on Oct. 8, said that the ultimate aim of the new regime was to restore democracy, but of a type that people could understand and work. "When the time comes your opinion will be freely asked," he added, "but when that time will be, events alone can tell."

NOV 28 1958

What had happened, General Ayub continued, was "a drastic and extreme step, taken with great reluctance but with the fullest conviction that there was no alternative to it except the disintegration and complete ruination of the country." Total administrative, economic, political, and moral chaos had been brought about by self-seeking political leaders who had "ravaged the country or tried to barter it away for personal gains," while "weak and irresolute Governments looked on with masterly inactivity and cowardice and allowed things to drift and deteriorate and discipline to go to pieces." Since the deaths of the *Quaid-i-Azam* (Mr M. A. Jinnah) and Mr. Liaquat Ali Khan, "politicians have started a free-for-all type of fighting in which no holds were barred. They have waged a ceaseless and bitter war against each other regardless of the ill-effects on the country, just to whet their appetites and satisfy their base motives. There has been no limit to the depth of their baseness, chicanery, deceit, and degradation. Having nothing constructive to offer, they used provincial feelings and sectarian, religious, and racial differences to set Pakistani against Pakistani. The country and people could go to the dogs as far as they were concerned."

After emphasizing that the Army had "kept severely aloof from politics," General Ayub went on: "You may not know, but I refused on several occasions the late Ghulam Mohammad's offer to take over the country. I did so in the belief that I could serve the cause of Pakistan better from the place where I was, and I also had a faint hope that some politicians would rise to the occasion and lead the country to a better future. Events have falsified those hopes, and we have come to the present pass. A perfectly sound country has been turned into a laughing-stock. This is bad, but the situation has to be faced and remedies found—as, God willing, they are going to be. As to the operation of martial law, I propose to use civilian agencies to the maximum. The armed forces will be used as little as possible. In the main they will continue to attend to their primary role of external defence. Martial law regulations will be issued which will tighten up existing laws on matters like malingering or inefficiency among officials, any form of bribery or corruption, hoarding, smuggling, or black marketeering, or any other type of anti-social or anti-State activity. Such matters will be dealt with ruthlessly and expeditiously . . ."

At a press conference on Oct. 10, General Ayub said that whilst it was the President's constitutional responsibility to halt the "disintegration of the country," it would have been the Army's responsibility to do so if the President had not acted. Education, food, and the rehabilitation of refugees would be the first problems to be tackled; the educational system would be overhauled; and a "scientific" rather than an "emotional" solution would be found for the problem of agrarian reform. On relations with India, he said: "No Pakistani can forget the Kashmir issue. We in the Army feel it more because we recognize the significance of the problem. Our efforts will be directed toward solving the problem satisfactorily and peacefully. Once there is a solution of the Canal Waters dispute and Kashmir, we have no further grouse against India. Bitterest enemies have become friends because of circumstance. You cannot have eternal enemies nor eternal friends, but you can have eternal interests."

In a further press statement on Oct. 19 General Ayub said that, in addition to the other reforms, the present "most expensive and dilatory" law system, "good only for those who know the law," would have to be replaced by a system which "the people understand and which gives them quicker justice." He stressed that the martial law introduced in the country was a "benign martial law to assist the civil power to clear up this mess," emphasizing that Pakistan was not under military rule and that the bulk of the Army was already back at its normal tasks.

President Iskander Mirza (58) was in 1919 the first Indian cadet to be gazetted into the British Army from Sandhurst. Transferred in 1926 to the Indian Political Service, he became the first Defence Secretary of Pakistan in 1947. In May 1954 he was appointed Governor of East Bengal with absolute powers, and the following October entered the Central Government as Minister of the Interior. He succeeded Mr. Ghulam Mohammad as Governor-General in 1955, and was elected President on the adoption of the Republican Constitution in the following year. Although returned to the Constituent Assembly in 1955 as a Moslem League candidate, he was largely responsible for the formation of the Republican Party, and has taken an active part in bringing about the various Cabinet changes of the past three years; in particular, he forced the resignation of the Suhrawardy Government in 1957 by refusing to allow it to seek a vote of confidence from the National Assembly (see 15819 A). In his public statements he has frequently advocated a "controlled democracy" for Pakistan, and has urged a revision of the Constitution on the U.S. model to give the President increased powers.

General Mohammad Ayub Khan (51) also entered the Indian Army from Sandhurst. He commanded a battalion in Burma in the Second World War, became C.-in-C. of the Pakistan Army in 1951, and served as Defence Minister in Mr. Mohammad Ali's Government in 1954-55.

In an Order issued on Oct. 10, President Mirza announced that the country would continue to be governed as nearly as possible in accordance with the abrogated Constitution, and that all courts in existence would continue in being. The Supreme Court and High Courts would have power to issue writs of *habeas corpus*, *mandamus*, prohibition, *quo warranto*, and *certiorari*, but no writ might be issued against the Chief Administrator of Martial Law or any person under his authority. No court or person might call in question the President's proclamation, any order made in pursuance thereof, any martial law order or regulation, or any finding, judgment, or order of a special military court.

Martial Law Regulations. - Measures against Corruption. - Arrests of Party Leaders.

For administrative purposes the country was divided on Oct. 9 into three zones, each under a senior officer—Major-General Sher Bahadur (Karachi Federal area), Lieut.-General Mohammad Azam Khan (West Pakistan), and Major-General Umrao Khan (East Pakistan). Mr. Aziz Ahmad (Secretary to the Ministry of Rehabilitation) was appointed Secretary-General to the Government and Deputy Chief Martial Law Administrator, whilst Lieut.-General Musa (the Army Chief of Staff) became Deputy C.-in-C. The Governor of East Pakistan, Mr. Sultanuddin Ahmed, was replaced on Oct. 10 by Mr. Zakir Hussain.

General Ayub Khan issued regulations on Oct. 9 providing for the setting-up of special and summary military courts to try contraventions of martial law regulations or offences under ordinary law. Persons convicted of such offences could be punished by death (subject to confirmation by the Administrator of Martial Law), transportation for life, rigorous imprisonment for not less than seven years, whipping, fines, or forfeiture of property, depending on the gravity of the offence; women and offenders above the age of 45, however, could not be sentenced to whipping.

Other regulations were issued by General Ayub Khan on Oct. 9 providing severe penalties against acts of sabotage, looting, mutiny, rebellion, hoarding, and smuggling, and prohibiting strikes or agitation in educational institutions or public utilities under penalties of up to 10 years' rigorous imprisonment.

The death penalty was imposed for assistance to any external enemy, mutiny, rebellion, rioting, acting as an enemy agent, or impeding the operations of the armed forces. As a maximum punishment the death penalty was also imposed for looting; dacoity; interfering with the working of roads, railways, canals, airfields, and telegraph, telephone, or wireless installations, or with any other Government property; giving false evidence; hoarding of food grains; smuggling of all kinds; child abduction; causing wilful damage to public property or to supplies for the armed forces; assisting or harbouring mutineers or rebels; and resisting or attacking any member of the military or civil forces, or any officials.

Attempts to bribe officials, acceptance of bribes by officials, or misuse of an official position by bestowing patronage or favours, were made punishable on Oct. 11 by 14 years' rigorous imprisonment. All offenders sentenced under martial law were ordered to be treated as ordinary criminals, whatever their status or position.

Similarly drastic measures were ordered by Major-General Umrao Khan in East Pakistan.

Pre-censorship was introduced for the publication by newspapers, periodicals, or any other media of any news, statements or comments other than communiqués issued by the martial law authorities, under penalties of 10 years' rigorous imprisonment.

Other orders were issued by Major-General Umrao Khan (1) prescribing the death penalty for publishing, printing, circulating (or causing to be published, printed, or circulated, or otherwise being in possession of), any pamphlet, poster, publication, or other type of literature calculated to promote or attempt to promote feelings of enmity or inter-provincial hatred; (2) imposing up to seven years' rigorous imprisonment for failure by any occupier of a building or premises to efface or destroy slogans or leaflets which had been written, painted or posted on the building concerned; (3) ordering up to 14 years' rigorous imprisonment, or a heavy fine, or both, for spreading (either orally, in writing, or by signals) reports calculated to create alarm or despondency amongst the public, or to create antagonism towards the armed forces; (4) prohibiting meetings of more than five persons without prior permission, except for *bona fide* religious meetings, and prescribing up to 10 years' rigorous imprisonment for holding or attending any unauthorized meeting or procession; (5) imposing 14 years' rigorous imprisonment for hoarding, profiteering, or black-marketeering of any essential commodities, food, or any other goods; (6) providing that where any young child was guilty of contravening any martial law order or regulation, the military court could (in addition to any punishment imposed on the child) sentence his father or legal guardian to imprisonment for up to five years or a fine up to 10,000 rupees, or both.

A further order issued by General Ayub Khan on Oct. 11 laid down specific measures against the hoarding of food grains.

The order, which came into immediate effect, laid down that no one could keep food grains in his possession for his personal consumption or that of members of his family, including servants, in excess of six maunds per head of rice or atta, nine maunds of paddy or seven maunds of wheat, or a combination of two or more of these food grains. It provided that any excess stocks would be taken over by the authorities at prices fixed by the Government.

Other regulations of the same date imposed 14 years' imprisonment for spreading rumours calculated to promote or encourage provincialism, segregarianism, or linguistic feelings, and five years' imprisonment for refusal to divulge one's name and address when questioned by an official.

Other measures announced by the Pakistani Government or General Ayub Khan on Oct. 11-13 included the following: (1) a direction by the Government to all banks in Pakistan freezing the balances of all political parties; (2) ordering a thorough inquiry into the state of the medical and health services by Lieut.-General Burki (then director-general of medical services of the armed forces, and subsequently appointed Minister of Health and Social Welfare—see below); (3) the dissolution of the Karachi Municipal Corporation, and the appointment of a civil servant (Mr. Azizullah Hasan) as Municipal Commissioner.

A number of prominent persons were arrested in the course of the new Administration's drive against corruption and black-marketeering including several leading politicians. Mr. M. A. Khuhro (Defence Minister in Mr. Noon's Government) was arrested in Karachi on Oct. 9 on a charge of black market dealings in cars, and was refused bail; General Ayub said on the following day that this action had been taken by the civil authorities, and that he himself had known nothing of it until afterwards. In Dacca, eight leading politicians and high officials of the East Pakistan Administration, including three former Ministers of the Central Government, were arrested on Oct. 12 on charges of corruption and acquiring properties disproportionate to their known sources of income. They were Mr. Hamidul Huq Choudhury; Mr. Abdul Mansur Ahmed and Mr. Abdul Khaleque (Minister of Commerce and Industries and Minister of Labour respectively in Mr. Suhrawardy's Government); Sheikh Mujibur Rahman (general secretary of the Awami League); Mr. Nuruddin Ahmad (managing director of a Dacca firm and a former Awami League member of the East Pakistan Assembly); Mr. Asghar Ali Shah (Industrial Development Commissioner); Mr. Aminul Choudhury (Under-Secretary in the Commerce, Labour, and Industries Department); and Mr. M. A. Jabbar (chief engineer for communications and buildings).

The Army, Navy, and police carried out a series of raids on suspected hiding places of smuggled goods, during which they made numerous arrests and recovered large stocks of gold sovereigns, watches, cameras, fountain pens, nylon, silk, jewellery, and perfumes. In addition to these measures against the black market, prices were sharply reduced by decree. In consequence a rush on the shops occurred; hoarders of foreign goods (many of which had for years been available only through the black market) hastened to release them; and hoarders of foreign currency hastened to exchange it for goods. To forestall the danger of inflation, limitations were imposed on Oct. 16 on purchases of cloth and household goods, and on Oct. 19 it was ordered that sales of imported goods should be made only on production of ration cards.

Four leading members of the left-wing National Awami Party—Maulana Bhashani, Khan Abdul Ghaffar Khan, Khan Abdus Samad Khan Achakzai, and Mr. G. M. Syed—were arrested on Oct. 10-12 under the Security of Pakistan Act. Maulana Bhashani, the founder and president of the party, had recently visited both the U.S.S.R. and the United Arab Republic, where he met President Nasser. Abdul Ghaffar Khan (the former "Redshirt" leader) and Abdus Samad Khan (known as "the Baluchi Gandhi") are the leaders of the movement for an autonomous Pathan province of "Pakhtoonistan" inside West Pakistan.

Policy Statements by President Mirza and General Ayub.

President Mirza gave details of his programme for the future in an interview with foreign correspondents on Oct. 15.

Emphasizing that he had acted unwillingly, President Mirza said: "I waited for a very long time, hoping things would get better, but they went from bad to worse. I did not feel elections would make any difference. In the Karachi municipal elections the biggest smugglers got the most votes. I was convinced there was going to be bloodshed in the coming elections and rigging of the polls, and you would get the scum of the country elected. I had not enough police to control the polling-booths all over the country. If the elections led to bloodshed, we should have had to have punitive martial law instead of the present non-violent one."

Of his future plans, President Mirza stated: "I shall run martial law for the shortest duration possible. Then we shall have a National Council of not more than 12 to 15 persons and run on that basis for some time to clear up the country." This body would replace, and probably include some members of, the committee of permanent officials which constituted the Advisory Council to the military régime. "Then we shall get about 30 or 40 good men to frame a Constitution," he added. "We shall get it examined by people of international repute to see that it is workable, and then there will be a referendum." Stating that not all former political leaders would necessarily be excluded from these two bodies, President Mirza mentioned Mr. Noon and Mr. K. K. Dutta (the former Minister of Education and Law, who is a Hindu) as "great gentlemen."

Summing up his aims, the President declared: "We want to get the Administration away from the politicians. The Administration failed because of the politicians' interference in it. We have got to have some sort of representative Parliament which at the same time can be restricted. When I used the words 'controlled democracy' I was cursed from one end of the world to the other. But I think we should have a democracy with a provision in the Constitution to right the situation when democracy runs off the rails." He would like a unitary Government with a strong Centre, but with a decentralized administration; the single unit of West Pakistan had failed because there had been too much concentration of power. As Pakistan's literacy rate was only 16 per cent, some form of restricted franchise would be necessary.

President Mirza said that he was "very worried" about the precipitate fall in prices and the resultant "buying spree." "Everyone is shouting at shopkeepers saying they have been black-marketing," he added, "but that is not quite true. Import licences have been given to friends of politicians and the shopkeepers had to pay high prices." If his advice had been asked, he would have advised against the arrest of Mr. Khuhro and other politicians on corruption charges, as he did not wish to give even the appearance of victimization or "witch-hunting." He justified the detention of Maulana Bhashani and other left-wing leaders, however, on the ground that they were "a danger to the country."

On foreign relations, the President said: "I believe in a potent Commonwealth, one that is much stronger and able to solve all its disputes without running here and there. But no one ever listens to me." He would like to be "very friendly" with India if the Kashmir and canal waters disputes were settled, but no Government in Pakistan, military or otherwise, could last for 24 hours if it failed to uphold the country's interests in these two matters. He added: "I have heard talk from India that if we do not have democracy here, why should Kashmir be asked to vote? That is tommy-rot. We want the Kashmiri people to decide. I would consider a stoppage of the Canal Waters as akin to throwing an atom bomb. But we are most anxious for friendly relations with India."

General Ayub issued the following statement on Oct. 17:

"There seems to be a fear in the minds of people that if martial law is lifted soon the old order will return with its attendant wickedness and evils, and all the good that has been done will be lost. Let me assure everyone that, while martial law will not be retained a minute longer than is necessary, it will not be lifted a minute earlier than the purpose for which it has been imposed is fulfilled. That purpose is the clearing-up of the political, social, economic, and administrative mess that has been created in the past. The country has to be brought back to convalescence, if not complete health. In addition, certain major reforms have to be introduced. All these things will need the cover of martial law."

Reorganization of Ministries. - Land Reform Inquiry.

The appointment of a Land Reforms Commission, headed by Mr. Akhtar Hussain (Governor of West Pakistan), was announced on Oct. 18. The Commission was required "to consider problems relating to the ownership and tenancy of agricultural land and recommend measures for ensuring better production and social justice, as well as security of tenure for those engaged in cultivation," and to report within the shortest possible time.

Other orders, issued on the same day, reduced the number of Government departments by merging the Labour Ministry with the Ministry of Health, Social Welfare, and Community Development; the Ministry of Parliamentary Affairs with the Law Ministry; and the Ministry of States and Frontier Regions with the Ministry of the Interior. The Cabinet post of Adviser on Kashmir Affairs was abolished. The Police Service was transferred from the Ministry of the Interior to the Cabinet Secretariat, and the National Planning Board was re-designated the Planning Commission, with Mr. G. Ahmed (chairman of the Water and Power Development Authority in West Pakistan) as its chairman.

New Government formed by General Ayub Khan. - Resignation of President Mirza. - General Ayub assumes Presidential Powers.

President Iskander Mirza formed a new Cabinet on Oct. 24 and appointed General Ayub Khan as Prime Minister. It was stated that the new Government was a Cabinet "in the accepted sense of the term," indicating its joint responsibility though it had no parliamentary basis. The Cabinet consisted entirely of non-political personalities, its membership being as follows:

General Mohammed Ayub Khan	Prime Minister, Defence, and Kashmir Affairs.
Mr. Manzoor Qadir	Foreign Affairs.
General Mohammad Azam Khan	Rehabilitation.
Lieut.-General W. A. Burki ..	Health and Social Welfare.
Mr. F. M. Khan	Communications.
Mr. Habibur Rahman	Education, Information and Broadcasting.
Lieut.-General K. M Sheikh ..	Interior.
Mr. Abul Kasim Khan . ..	Industries, Works, Irrigation and Power.
Mr. Hafizur Rahman	Food and Agriculture.
Mr. Zulfiqar Butto .. .	Commerce.
Mr. M. Shoaib	Finance.
Maulvi Mohammad Ibrahim ..	Law.

Mr. Manzoor Qadir is a prominent member of the Lahore Bar; **Lieut.-General Sheikh,** a former Chief of Staff, received his military education at Sandhurst and the Imperial Defence College; **Lieut.-General Azam Khan,** also trained at Sandhurst, distinguished himself in the relief work after the Punjab floods of 1950, whilst **Lieut.-General Burki** (who took his M.D. at St. Andrew's University) was Director-General of Medical Services of the Pakistan armed forces. **Mr. F. M. Khan,** an expert on railways, is Chief Election Commissioner, **Mr. Habibur Rahman** was Ambassador in Brussels at the time of his appointment to the new Cabinet; **Mr. Butto** is a barrister who graduated at the University of California, took his M.A. at Christ Church, Oxford, and passed his Bar examinations at Lincoln's Inn, London; and **Maulvi Mohammad Ibrahim** is Vice-Chancellor of Dacca University. **Mr. Abul Kasim Khan,** an industrialist, was a member of the first Constituent Assembly but had lately taken no part in politics. **Mr. Hafizur Rahman** is an East Pakistan Government official, and **Mr. Shoaib** is a senior official at the Ministry of Finance.

Following the swearing-in of the new Ministers on Oct. 27, President Mirza announced in the early hours of Oct. 28 that he had decided "to step aside and hand over all powers" to General Ayub Khan.

President Mirza said that he had reached the opinion that any semblance of dual control was "likely to hamper the effective performance of the immense and urgent task of evolving an effective structure for the future administration of the country." He added: "An unfortunate impression exists in the minds of a great many people, both at home and abroad, that General Ayub and I may not always act in unison. I cannot help feeling that such an impression, if allowed to continue, would be most damaging to our cause. I have therefore decided to step aside and hand over all powers to General Ayub Khan." The statement added that the imposition of martial law which he [the ex-President] had adopted "in the interest of our beloved country" had been "extremely well received by our people and by our friends and well-wishers abroad." Since then he had done his best to help General Ayub Khan and his administration "in the difficult task of bringing order out of chaos."

General Ayub Khan issued a proclamation immediately after President Mirza's resignation, worded as follows: "Major-General Iskander Mirza, lately President of Pakistan, has relinquished his office of President and has handed over all powers to me, General Mohammed Ayub Khan, Chief Martial Law Administrator and Supreme Commander of the armed forces of Pakistan. Therefore, I have this same night [Oct. 2] assumed the office of President and have taken upon myself the exercise of the said powers and all other powers appertaining thereto."

Later on Oct. 28 President Ayub swore in his Cabinet, the members of which were the same as those inducted by President Mirza on the previous day. President Ayub retained the post of Chief Martial Law Administrator, but appointed the commanders of the three defence services as Deputy Martial Law Administrators. On Oct. 27 General Mohammad Musa (50), the Deputy C.-in-C., was appointed Commander-in-Chief of the Army in succession to General Ayub.

Earlier Political Developments in East Pakistan.

On the expiry of the two-month period for which Governor's rule had been established in East Pakistan, the former Chief Minister, Mr. Ataur Rahman Khan, was commissioned by the Governor on Aug. 24 to form a new Ministry. This consisted of Mr. A. R. Khan, Mr. Abdul Khaleque, Mr. Kafiluddin Choudhury, Mr Mansur Ali, Mr. Manoranjan Dhar, and Mr. Dhirendra Nath Dutta; the first four belonged to the Awami League and the other two to the Congress Party. The Ministry was subsequently enlarged by the inclusion of Mr. Lutfur Rehman Khan (a dissident member of the *Krishak Sramik* party) on Sept. 18 and of Mr. Rajendra Nath Sarker (a member of a dissident Congress group opposed to that led by Mr. Dhar) on Sept. 22. The new Government's first action was to repeal the Preventive Detention Ordinance, which had been promulgated on July 25 following the revolution in Iraq and the subsequent crisis in the Middle East.

When the Provincial Assembly met on Sept. 20, a Moslem League member protested against the presence of six Government supporters who had been disqualified by the Election Commission. [The Commission had ruled that the office of public prosecutor, which all these members held, was an office of profit; although a Bill was subsequently passed by the National Assembly making the holding of this office no longer a disqualification, it was not given retrospective effect and an Ordinance had to be issued by the President for this purpose.] The Speaker, Mr. Abdul Hakim, reserved his ruling on this question, ruled out of order a motion of no-confidence in himself proposed by Government supporters, and named several Awami League members for disorderly conduct. A fight then broke out and continued for almost an hour; Government and Opposition members attacked one another with chairs and steel microphone stands, the national flag was torn down and trampled on, and Mr. Hakim, who narrowly escaped serious injury, was forced to leave the Chamber. In his absence the Deputy Speaker, Mr. Shahed Ali (a former *Krishak Sramik* party supporter who had joined the Awami League a few days beforehand), had put to the vote and declared "carried" a Government motion alleging Mr. Hakim to be "of unsound mind." Mr. Hakim, however, told the Press that he had adjourned the House before this motion was put.

On Sept. 27-22 the Assembly had to be adjourned as both sides had introduced hundreds of their supporters into the lobbies. On Sept. 23 the police excluded all outsiders from the premises, and also prevented Mr. Hakim from entering the Chamber. When Mr. Ali tried to take the chair Opposition members pelted him with pieces of furniture, causing such serious injuries that he died two days later; the police then entered the Chamber and forcibly expelled the Opposition, two of whom were injured and taken to hospital. Several Opposition members, including Mr. Sarkar (a former Chief Minister), were arrested on Sept. 24 and charged with the attempted murder of Mr. Ali, but were released on bail. The Provincial budget was passed on the same day in the absence of the Opposition, who were boycotting the House, and the Assembly was then adjourned.

Ban on Moslem League's "National Guard."

Following his election on March 30 as president of the Moslem League, Khan Abdul Qaiyum Khan repeatedly demanded war with India and threatened revolution in his public speeches. Thus on May 25, addressing about 100,000 people at Rawalpindi, he declared that there was no other means of solving the Kashmir problem except war; that Mr. Noon's Government was "incapable of thinking in terms of *jehad*" (holy war); and that if the Government failed to hold fair elections the people would be obliged to consider changing the Government by violence.

The Government replied to this agitation by issuing an Ordinance on Sept. 20 forbidding the wearing of political uniforms and the maintenance of military or para-military associations by private persons or organizations. The only important organization affected was the Moslem League's "National Guard," a force about 60,000 strong, which had recently been parading in public wearing uniforms and steel helmets and carrying rifles. In a statement issued on Sept. 23, Mr. Noon said that there would be little chance of free and fair elections if all the political parties had private armies of uniformed volunteers, which would sooner or later lead to clashes and lawlessness.

When Khan Abdul Qaiyum arrived in Karachi on the same day, several thousand Moslem League supporters met him at the station in defiance of a police order prohibiting assemblies of more than five people. The police used tear-gas to disperse the crowd, and subsequently made *lathi* charges against riotous mobs which were stoning buses. The Working Committee of the Moslem League adopted a resolution on Sept. 28 accusing the Government of trying to create lawlessness and bloodshed as a pretext for postponing elections, and declaring that it would be the duty of the Pakistani people and the Moslem League to throw out any Government which was bent on introducing despotism, "if need be by extra-constitutional methods."

Arrest of Khan of Kalat.

The Khan of Kalat (Mir Ahmad Yar) was arrested on Oct. 6, after some resistance from his bodyguard, and detained under the Security of Pakistan Act on a charge of conspiring to bring about Kalat's secession from Pakistan.

On the partition of India the Khan had claimed sovereign rights over Kalat, which acceded to Pakistan in March 1948 only after the Army had occupied the State. When in 1952 Kalat united with the smaller princely States of Las Bela, Makran, and Kharan to form the Baluchistan States Union, he was elected life President of the Council of Rulers [see 12197 C]; he lost this position in 1955, however, on the integration of the Union into West Pakistan, and early in 1958

visited Britain and the U.S.A. to obtain legal advice on how he might reclaim his State. According to official sources, he had recently organized a movement among his former subjects demanding the reversal of Kalat's accession to Pakistan, gathered round him a gang of "desperadoes," and established contact with certain political parties. Summoned to Karachi for talks with President Mirza, he had refused to obey; instead he pulled down the Pakistani flag, hoisted his own, repudiated Kalat's accession to Pakistan, and appealed to the Baluchi tribes to rise in arms.

In the early morning of Oct. 6 troops cordoned off the palace at Kalat, and the Khan was summoned to surrender by the civil authorities. After refusing to do so he invited the Deputy Commissioner to enter the palace for a parley, but as the latter entered the gates with his escort they were fired on, three of them being wounded. The troops then surrounded the palace and a tank fired a few shots at its walls, whereupon the Khan surrendered. As he was being removed, an unruly crowd gathered outside the palace and refused to disperse until the troops opened fire, killing three persons and wounding two. After his arrest the Khan was flown to Lahore, where he was imprisoned; one of his sons—Prince Mohiuddin, who led the palace guards in their resistance to his father's arrest—was also taken into custody. The Khan's armoury, which was seized intact, was officially stated to have contained thousands of rifles, other arms of various types, and stores of ammunition and food sufficient to equip a private army.

An order was issued by President Mirza on Oct. 6 depriving the Khan of all his distinctions, privileges, and immunities, including his privy purse of Rs. 600,000 (£45,000) a year, and nominating his 18-year-old son, Mohammed Daud Jan, as his successor.—(Pakistan High Commissioner's Office, London - Times - Daily Telegraph - Manchester Guardian)

(Prev. rep. 16247 A.)

A. UNITED KINGDOM. — Gold and Dollar Reserves.

The Treasury announced on Oct. 2 that the sterling area's gold and dollar reserves had risen during September by $31,000,000 after taking into account (*a*) the payment of $17,000,000 to the E.P.U. in respect of the U.K.'s deficit in August, and (*b*) the payment of $2,500,000 to creditor countries in the Union under bilateral settlements. As a result, the gold and dollar reserves stood at $3,120,000,000 on Sept. 30.

It was commented in the Press that the continued rise in the reserves, despite the deficits incurred with the E.P.U., showed the extent to which the sterling area's dollar balance had been improved, due to the facts (i) that dollar exports from the U.K. and the other sterling area countries had been well maintained throughout the U.S. recession and the initial recovery; (ii) that distrust of the dollar, together with the interest differential advantage in favour of London, had led to some "switching" of dollars into sterling both by American and (on a larger scale) by European holders; (iii) that dollar loans had been raised on the New York market by several sterling area countries, e.g. Australia and New Zealand.

Provisional figures for the E.P.U. September settlement showed that Britain had a deficit of £13,000,000, three-quarters of which would be settled in October in gold or dollars and one-quarter by an increase in the U.K.'s debt to the Union.

It was pointed out in the Press that, unlike exports to the dollar area, sterling exports to Europe (both from the U.K. and other sterling area countries) had not been maintained at their previous level—partly owing to the fall in commodity prices and partly to import restrictions, particularly in France. In addition, it was believed that spending by British tourists on the Continent at an unusually high level had also been a factor; on the other hand, the Brussels Fair and travel restrictions imposed in France had reduced the number of tourists coming to Britain from the Continent.

The sterling-dollar rate opened at $2.80¼ on Sept. 1, but thereafter weakened owing to a commercial demand for dollars, dropping to $2.79⅞ on Sept. 5 and $2.79 15/16 on Sept. 6. Subsequently the rate again rose steadily, reaching $2.80½ on Sept. 18-19 and fluctuating between $2.80 9/16 and $2.80 11/16 during the rest of the month. Transferable sterling in Zurich dropped from $2.78295 on Sept. 1 to $2.77975 on Sept. 5-6, but then rose again slightly beyond $2.78. Becoming very firm as from Sept. 19, the rate closed at $2.79 on Sept. 29-30. (Treasury Press Office - Financial Times) **(Prev. rep. 16403 B.)**

B. CHRISTMAS ISLAND (Indian Ocean). — Australian-New Zealand Agreement on Continued Joint Exploitation of Phosphate Deposits.

A new agreement between the Australian and New Zealand Governments was concluded in October governing their mutual rights and interests in Christmas Island (Indian Ocean), which had recently been transferred from British to Australian sovereignty. The agreement preserved New Zealand's position as an equal partner with Australia in the Christmas Island Phosphate Commission, which was set up in 1949 for the joint exploitation of the island's phosphate deposits.—(N.Z. Directorate of Information, Wellington)

C. ISRAEL. — The Kafr Kassim Massacre. - Sentences on Border Police Personnel.

The trial by a military court in Jerusalem of 11 members of the Israel border police, alleged to be responsible for the killing of 43 Arab villagers at Kafr Kassim on Oct. 29, 1956, ended on Oct. 16. Eight of the defendants were found guilty and sentenced to terms of imprisonment ranging from seven to 17 years, while three others had previously been acquitted. The president of the military court was Judge Benjamin Halevy, president of the Jerusalem District Court.

The trial had opened in January 1957 but had at one stage been suspended for several months. During the hearings, which were in public and which ended in January 1958, the court investigated the events on the date in question, when, on the eve of the launching of the Sinai campaign by the Israeli armed forces, 43 inhabitants of Kafr Kassim—either unaware that a curfew had been enforced that day, or innocently breaking it with no other intention than of returning home—were shot dead by members of a police patrol unit detailed to guard the approaches to the village. The shooting aroused deep concern in Israel, and grief and horror were expressed in the Knesset by Mr. Ben-Gurion, the Prime Minister [see page 16022, second column]. The 11 defendants were subsequently arrested and charged with deliberate murder after an inquiry commission, appointed by Mr. Ben-Gurion immediately after the incident, had submitted its report. Although the border police is normally a civilian body, it was under military command at the time because of the state of emergency imposed in connexion with the launching of the Sinai campaign.

Of the eight defendants found guilty, Major Shmuel Melinki (a battalion commander of the border police), though not himself present at the massacre, was charged with having issued the illegal order to carry out the shootings; Lieutenant Gavriel Dahan (a platoon commander) was accused of having given the order to shoot to his subordinates and, in addition, of having himself shot two of the Arabs, while the other six men, including an n.c.o. (Corporal Shalom Ofer), were charged with having shot varying numbers of the 43 victims. All the accused pleaded "not guilty," claiming that they had carried out orders given by their superiors. In giving evidence, however, Major Melinki's superior officer (Lieut.-Colonel Shadmi) denied that he had discussed with Major Melinki the position of curfew-breakers ignorant of their offence.

After the eight officers and men had been found guilty of first degree murder on Oct. 12 they were sentenced on Oct. 16 to the following terms of imprisonment: Major Melinki—17 years; Lieutenant Dahan and Corporal Ofer—each 15 years; five privates—each seven years. Notice of appeal was given by all the defendants.

The death sentence does not exist in Israel except for treason in time of war.—(Israel Government Information Department, Jerusalem - Times - New York Times)

D. SWEDEN. — Municipal Elections.

Municipal elections were held in Sweden on Sept. 21, the percentage poll for the principal parties being as follows (1954 percentages in parentheses): Conservatives 19.8 per cent (15.2); Centre Party (formerly Agrarians) 13.2 per cent (10.5); Liberals (People's Party) 15.4 per cent (21.16); Social Democrats 47.5 per cent (47.8); Communists 4 per cent (4.9).

The Social Democrats obtained 905 seats (+19); the Conservatives 351 (+84); the Liberals 263 (—108); the Centre Party 229 (+31); and the Communists 34 (—11). Compared with the recent general elections, the Liberals lost further ground, the Conservatives and the Centre Party continued to make gains, and the Social Democrats improved their position.

In Stockholm the non-Socialist parties lost their majority on the city council, obtaining 49 seats against 51 previously; the Social Democrats and Communists together gained 51 seats.—(Svenska Dagbladet, Stockholm)

E. CUBA. — Construction of Nuclear Power Plant by Anglo-American Consortium.

The Cuban delegation at the second International Atomic Energy Conference in Geneva announced on Sept. 1 that negotiations had been concluded with British and U.S. engineering firms for the building of a 220,000-k.w. nuclear power plant in the Pinar del Rio province of Western Cuba. The reactor would be of the boiling water type, would be located at Santa Lucia, and was expected to be ready by early 1961 as part of the electrification programme for the province. The firms participating in the contract are the Mitchell Engineering Co. Ltd. of London; the American Machine and Foundry Company of New York; and the General Nuclear Engineering Corporation of Dunedin, Florida.

A. UNITED KINGDOM. — Opening of New Session of Parliament. - The Queen's Speech.

Her Majesty the Queen opened the new session of Parliament on Oct. 28 with the following Speech from the Throne :

"My Lords and Members of the House of Commons:

"I look forward eagerly to the tour of Canada which I shall carry out next summer with my dear husband . . . We also look forward with much pleasure to our stay in Ghana in the autumn of next year. This will be my first opportunity of meeting my people in this new member country of the Commonwealth, and I particularly welcome it I hope that it will also be possible for me to visit Sierra Leone and Gambia.

"In the spirit which inspired the recent Trade and Economic Conference at Montreal, my Government will seek to promote the closest co-operation within the Commonwealth. It is their firm belief that the Commonwealth has a unique contribution to make to the progress of human society. They will also continue to foster the prosperity of the oversea territories which are in their charge. New legislation to maintain the provision of financial assistance for Colonial development and welfare will be laid before you.

"My Government will neglect no opportunity to promote the advance of the Colonial territories and the increasing association of their peoples with the management of their own affairs They are taking energetic steps to protect the employment of the people of Malta, and hope that the forthcoming constitutional discussions with the Maltese political parties will set the pattern of a stable and thriving future. They are deeply concerned at the situation in Cyprus and the tragic loss of life involved. They will persevere in their efforts to secure a settlement ensuring tranquillity and progress in the island.

"I shall be very happy to welcome the Shah of Iran on his visit to this country next May.

"My Government will seek to play a full and constructive part in preserving peace and justice and promoting improved standards of life throughout the world. To this end they will actively support the United Nations, and the North Atlantic Alliance and other regional pacts of which they are members. They will co-operate with the United Nations and the countries of the Middle East in any measures likely to relieve international tension in that troubled area and to take account of the needs and aspirations of its peoples.

"Negotiations on the possibility of securing a controlled suspension of the testing of nuclear weapons are due to begin in Geneva on October 31 between my Government and the Governments of the United States and the Soviet Union. It is the earnest hope of my Government that these discussions . . . may prove fruitful. My Government will also continue to seek an agreement on disarmament in the hope that thereby the fear of war may be lifted from the minds of our own and succeeding generations.

Members of the House of Commons:

"Estimates for the public services will be laid before you in due course.

My Lords and Members of the House of Commons:

"My Ministers are resolved to ensure the strength of sterling at home and abroad and a high and stable level of employment. In co-operation with the Commonwealth, they will seek to expand our oversea trade both in Europe, by the creation of a Free Trade Area, and throughout the world.

"A healthy and thriving agriculture will remain among the principal objectives of my Government. Legislation will be introduced to enable special assistance to be given to small farmers and to provide for further support for the Agricultural Mortgage Corporation.

"A Bill will be laid before you for the protection and control of deer in Scotland.

"My Ministers will continue to help the fishing industry They are supporting in the United Nations a proposal that a second World Conference on the Law of the Sea should be convened soon. It is their hope that this may lead to a lasting settlement of the problems of the territorial sea and fishing limits, which are of grave concern to British fishermen.

"It will be the special care of my Government to introduce measures to promote the social well-being of my people. Proposals will be laid before you for placing the National Insurance Scheme on a sound financial basis and enabling a larger section of my people to build up pension rights related to their earnings. Effect will be given to many of the recommendations of the Royal Commission on mental illness; and the provisions of a new Bill will replace the existing law on mental health in England and Wales. My Ministers will introduce legislation to amend and strengthen the Factories Acts. A Bill will also be brought in to repeal the Catering Wages Act and to convert the four Catering Wages Boards which are functioning at present into Wages Councils.

"My Government will continue to encourage the extension of facilities for higher education in the universities and technical colleges. In addition they will announce new plans for developing the nation's schools intended, in particular, to improve the scope and quality of secondary education.

"My Government view with gravity the increase in crime. In the light of the most up-to-date knowledge and research they will seek to improve the penal system and to make methods of dealing with offenders more effective.

"My Ministers will continue their efforts to secure a just balance between the expanding demands of the modern State and the freedom and status of the individual. They will introduce Bills to improve the basis of compensation for compulsory acquisition of land; to give further encouragement to home ownership; and to provide for the future management of the new towns in England and Wales Legislation will also be proposed to establish a modern code for the general regulation of building in Scotland.

"Believing that the traditional rights and liberties of my subjects should be safeguarded by permanent statute, my Ministers will seek specific statutory sanction for the continuance, for a temporary period and in a restricted form, of certain economic controls deriving from wartime emergency powers, and will allow the remainder to lapse.

"Other measures will be laid before you in due course.

My Lords and Members of the House of Commons:

"Today, for the first time, this ceremony is being watched not only by those who are present in this Chamber, but by many millions of my subjects. Peoples in other lands will also be able to witness this renewal of the life of Parliament. Outwardly they will see the pageantry and the symbols of authority and State; but in their hearts they will surely respond to the spirit of hope and purpose which inspires our parliamentary tradition. In this spirit I pray that the blessing of Almighty God may rest upon your counsels."

As stated in the Queen's Speech, the State opening of Parliament—the fourth session of the 300th Parliament of the realm—was televised for the first time. The ceremony was seen and heard by millions of viewers in the United Kingdom and, through the Eurovision network, in seven European countries—Belgium, Denmark, France, Western Germany, Italy, the Netherlands, and Switzerland.
(Times - Daily Telegraph) **(Prev. rep. 15844 A.)**

B. INTERNATIONAL SUGAR COUNCIL. — New International Sugar Agreement.

An International Sugar Conference, convened by the United Nations, met in Geneva from Sept. 22 - Oct. 24 under the chairmanship of Mr. Eric Roll, of the British Board of Trade.

The conference unanimously approved on Oct. 24 a new International Sugar Agreement to run for 5 years from Jan. 1, 1959, and to include all exporting countries - this being the first time that a fully comprehensive commodity agreement had ever been negotiated. The major changes in the new agreement, compared with that of 1953, lay in the inclusion of Brazil and Peru (which between them dispose of 1,000,000 tons of exportable sugar and by price-cutting could undermine the stability of the market), as well as of India (a potentially large exporter), Italy, and Denmark.

The principal provisions of the new agreement were :

Export Quotas. These remained unchanged for all signatories to the existing agreement. The annual quotas of the new members were fixed as follows: Brazil 550,000 metric tons; Peru, 490,000 tons; India 100,000 tons; Denmark 75,000 tons; Italy 20,000 tons. [It was explained in the Press that the exporting countries which signed the 1953 agreement had foregone claims to higher quotas in view of the anticipated increase in world consumption, and to allow the new members to receive their due allocations.]

Price Regulation. The new agreement provided for the price range to remain unchanged at 3.25 cents a lb. minimum and 3.45 cents maximum, but strengthened the mechanism for checking prices by stipulating that when the prevailing price exceeded 3.75 cents the International Sugar Council should meet within a week to consider the market situation and take appropriate measures. Failing agreement by the Council on the action to be taken, export quotas would be increased forthwith by 2½ per cent. If the prevailing price continued above 3.75 cents after the action decided on by the Council had been taken, or after the quotas had been automatically increased by 2½ per cent, the Council would meet again within seven days to consider the market situation further.

Provision was also made for dealing with a fall in the prevailing price below 3.25 cents, while the mechanism for handling shortfalls by any exporting country was tightened up to enable the Council to make an earlier assessment and to notify the other members.

The agreement is subject to approval by the Governments which were represented at the conference, and in some cases to parliamentary ratification.—(Times - Financial Times)

C. UNITED STATES. — New Justice appointed to Supreme Court.

Mr. Potter Stewart (43), of Cincinnati, a Judge of the U.S. Court of Appeal, was nominated to the Supreme Court by President Eisenhower on Oct. 7 in place of Justice Harold H. Burton, who had retired through ill-health. A Republican from Ohio, Justice Stewart had served on the Court of Appeal for the Sixth Circuit (covering Ohio, Michigan, Kentucky and Tennessee) since 1954.—(New York Times)
(Prev. rep. 15451 C.)

A. UNITED KINGDOM - WESTERN GERMANY. — President Heuss's State Visit to Britain.

Dr. Theodor Heuss, President of the German Federal Republic, paid a three-day State visit to Britain on Oct. 20-22—the first such visit by the head of the German State since that of Kaiser Wilhelm II in 1907.

President Heuss flew from Germany to Gatwick Airport (Surrey), where he was met by the Duke of Gloucester, and travelled from Gatwick to London by train. He was welcomed at Victoria by the Queen and the Duke of Edinburgh and drove with them in carriage procession to Buckingham Palace. In the afternoon he laid a wreath on the Tomb of the Unknown Warrior at Westminster Abbey, visited the Queen Mother at Clarence House, and received addresses at St. James's Palace from the chairman of the L.C.C. and the Lord Mayor and Corporation of the City of London.

At a State banquet at Buckingham Palace the same evening her Majesty spoke of the great respect in which President Heuss was held both in Germany and abroad, and welcomed him as "a statesman with strong links with the great liberal traditions of the past." After expressing her admiration for the post-war recovery of Federal Germany, and her understanding of the desire of the German people "to see unity restored to their country as a whole," she said that the "tragic events of the past half-century in the relations between our countries" were now "part of history" and must be replaced by "bonds of amity and peace in association with other countries of the West." As the President himself had said, "nothing can ever erase from the record certain deeds and events perpetrated in Europe within our memory," but their most important significance today was "as a warning and an example to the whole world of what happens when democracy breaks down." In conclusion, her Majesty expressed the fervent hope that the President's visit would be an important step "towards rebuilding true friendship between our two countries."

In reply, President Heuss spoke of the post-war efforts of the German people to build up a democratic order "firmly based on a free and responsible civic spirit and not on brutality and arbitrary power." He paid tribute to the important part which the British Government and people had played in fostering this development, "in spite of many bitter experiences," and said that "no one in Germany will ever forget that ten years ago a great many British pilots helped to save blockaded Berlin from outright starvation." He stressed that the longing of the German people for reunification was "no mere German sentimentality, as some people—perhaps even in this country—may say with a shrug of their shoulders, but a crucial political problem for Europe." After speaking of the close post-war links between the two countries in NATO and the various European organizations, the President reinforced her Majesty's plea for the rebuilding of close and lasting friendship between the British and German peoples.

In the morning of Oct. 21 President Heuss received the Diplomatic Corps and the Commonwealth High Commissioners at Buckingham Palace. He later drove to Guildhall, with a Sovereign's escort of the Household Cavalry, to attend a luncheon given in his honour by the Lord Mayor of London (Sir Dennis Truscott) and the City Corporation. In the afternoon the President paid a visit to the British Museum, while in the evening he gave a dinner for the Queen and the Duke of Edinburgh at the German Embassy.

In his speech at Guildhall, President Heuss recalled that he first visited London in 1911, at a time when there were many bonds between the British and German peoples and any serious conflict between them seemed unthinkable. "Since then," he added, "two terrible wars have torn many of these bonds asunder and separated our peoples for a long time. We cannot undo the past. But the fact that I have been invited by the Queen to visit your country after these tragic events . . . is, I feel sure, a sign of the confidence which has been restored between us in recent years. When in the past men were torn asunder by warlike conflicts, never was battle joined between the British and German peoples until it became the tragic fate of our generation to see our two nations for the first time—and then not only once, but twice—face each other as foes in the deadly passion of war. That must never happen again, and never will . . . "

On Oct. 22 President Heuss visited Oxford University, where he was greeted at All Souls College by the Chancellor, Lord Halifax. During his visit he announced the gift of five annual Fellowships for British students at German universities (see below) and spoke of the high regard in which the University of Oxford was held in Germany; he paid a special tribute to the fact that Oxford had become the *alma mater* of many German scholars who had been forced to flee from their own country "during the years of terror."

Later in the day President Heuss spoke as follows at a reception at County Hall (London) for organizations dealing with Anglo-German matters:

"No one will dream of belittling the terrible things that happened during the last war. They originated in the *hubris* [insolent pride] of those then in power in Germany, which brought sorrow upon almost every nation in the world, including the people of these islands . . . I see in this hall more than one old friend who for political or so-called 'racial' reasons was driven out of the country of his fathers, the land that was his home during the years of his youth and manhood. We are grateful to Britain for having given these unfortunate people the opportunity to find a living. We are aware, too, of our duty to make amends for the wrong that was done—an action which, alas, will always remain makeshift in the realm of the spiritual and of family relations, and which in regard to the material side will always remain a piecemeal job, though accomplished by dint of much effort. After all, it is a matter of over two and a quarter million claims, all of which must be channelled through a legal procedure. I know well enough that this work is still accompanied by a great deal of bitterness . . . "

Before returning to Germany President Heuss paid a private visit to Dr. Alfred Wiener, a 73-year-old German-Jewish refugee from Nazi persecution, and a personal friend of the President in his earlier years. At Dr Wiener's home in London he saw the library of over 50,000 books, documents, and personal diaries dealing with the tyranny, persecution and criminal activities of the Nazis in their years of power, which had been collected by Dr. Wiener over the past 25 years. Among them were files in which Dr. Heuss's own name appeared on Nazi documents as an "enemy of the regime," together with books written by Dr. Heuss which had been burned by the Nazis.

[The Wiener Library in London has been recognized as an important research institute of modern history; it is used by many scholars and historians and gave great assistance to the Ministry of Information during the war. It contains the names of every person known to have perished in the Nazi concentration camps and gas-chambers, together with a great quantity of detailed information about Nazi legislation, the horrors perpetrated during the Nazi regime, the persecution of the Jews, and the totalitarian campaign against the Christian churches.]

President Heuss—who was accompanied throughout his visit by Dr von Brentano, the Federal Foreign Minister—left London for Germany on the morning of Oct. 23.

Under the Fellowships announced by President Heuss during his visit to Oxford, five graduates will be able to study for one year at West German universities of their own choosing, either in the Federal Republic or in West Berlin. The Fellowships—initially established for the five-year period 1959-1964, and known as Theodor Heuss Fellowships—are intended for post-graduate research work in classics, modern history, modern languages and literature, English literature, Oriental studies, and philosophy, politics and economics.

While in England President Heuss also handed over a gift of £5,000 for the reconstruction of Coventry Cathedral, to be spent on the windows for the Chapel of Unity; the deed of gift bore the words: *Möge die Chapel of Unity der brüderlichen Verbundenheit aller Völker dienen* ("May the Chapel of Unity serve the brotherly concord of all nations.")
(Times - Daily Telegraph - Frankfurter Allgemeine Zeitung)

B. UNITED KINGDOM. — Reduction in Interest Rates on Local Authority Loans. - Reduced Interest Rates on Tax Reserve Certificates.

Interest rates on new loans to local authorities from the Local Loans Fund were twice reduced in recent weeks, viz.: (*a*) from Aug. 23: for loans from 5 to 15 and over 15 years, from 6¼ per cent to 6 per cent, the rate for loans for up to five years remaining unchanged at 5¾ per cent; (*b*) from Oct. 25: for loans up to five years to 5½ per cent; from 5 to 15 years to 5¾ per cent; for 15 to 30 years to 5⅞ per cent; and for over 30 years (a new loan category) to 5¾ per cent.

The changes in interest rates for new local loans during the past 15 months are shown below:

	1958				1957	
	Oct. 25	Aug. 23	July 12	Feb. 25	Sept. 28	July 13
	%	%	%	%	%	%
Duration of Loans						
Up to 5 years	5½	5¾	5¾	6¼	7¼	5¾
Between 5 and 15 years	5¾	6	6¼	6¼	6¾	6
Between 15 and 30 years	5⅞	6	6¼	6¼	6¾	5¾
Over 30 years	5¾					

The interest rate on Tax Reserve Certificates was reduced for Certificates issued from March 29 to 3¼ per cent, and for Certificates issued from Aug. 20 to 2½ per cent, both tax free.
(Treasury Press Office, London - Financial Times)

C. UNITED ARAB REPUBLIC. — Land Reforms in Syrian Region.

Agrarian reforms similar to those carried out in Egypt in 1952 were introduced in Syria under a decree issued by President Nasser on Sept. 27, which restricted the amount of land which might be held by one person to 300 hectares (741 acres), or 80 hectares (198 acres) of land irrigated by rivers or wells and planted with fruit trees. The decree will be implemented over a five-year period beginning on Jan. 1, 1959, from which date all landowners will be required to pay the State three-quarters of all rent received for land exceeding the maximum permitted limit. **(Times - Le Monde, Paris)**

A. SHIPPING. — World Construction Figures. - Launching of Dutch Transatlantic Liner "Rotterdam." - Sale of Canadian-West Indies Fleet.

Lloyd's Register returns of merchant shipbuilding for the third quarter of 1958, published on Oct. 22, gave the gross tonnage of vessels under construction throughout the world (excluding the U.S.S.R. and China, as well as vessels under 100 tons, barges, etc.), as 10,205,791, of which 22.53 per cent was building in the United Kingdom and 77.47 per cent elsewhere. The world total was the highest ever recorded, all leading shipbuilding countries showing increases over the previous quarter's figures except Japan, Sweden, Denmark, Yugoslavia, and Finland.

Ships building in Great Britain and Northern Ireland numbered 328 of 2,299,133 tons (steamers 1,150,010 tons, motorships 1,149,123 tons), including 3 steamers of over 40,000 tons, 5 of 30,000-40,000 tons, and 14 steamers and 3 motorships of 20,000-25,000 tons. Of the total, 283 ships (2,049,273 tons) were building for the U.K., 18 (40,810 tons) for other British Commonwealth countries, 4 (52,150 tons) for Norway, 2 (42,000 tons) for Denmark, 4 (35,050 tons) for Liberia, 2 (13,560 tons) for Belgium, 1 (12,000 tons) for the Irish Republic, 1 (9,650 tons) for Greece, 3 (9,300 tons) for Cuba, 3 small vessels for Poland and 1 each for France and Kuwait, and 5 ships (31,650 tons) for unspecified countries. The principal shipbuilding centres were: the Clyde (98 ships of 707,735 tons), the Tyne (40 ships of 414,334 tons), Belfast (17 ships of 305,740 tons), Sunderland (27 ships of 240,056 tons), the Tees (21 ships of 232,519 tons), Liverpool (13 ships of 124,719 tons), and Barrow (3 ships of 94,500 tons).

Ships building in other countries numbered 1,235 of 7,096,658 tons (steamers 3,704,836 tons, motorships 4,201,822 tons), divided as follows: Japan 132 (1,169,926 tons); Western Germany 218 (1,103,388 tons); Italy 104 (924,388 tons); U.S.A. 50 (913,505 tons), Netherlands 132 (750,917 tons); France 64 (625,228 tons), Sweden 63 (594,787 tons); Norway 58 (334,767 tons); Spain 112 (282,833 tons); Denmark 34 (223,429 tons); Poland 63 (213,643 tons), British Commonwealth countries 58 (180,770 tons); Yugoslavia 30 (179,720 tons); Belgium 16 (172,637 tons); Finland 60 (155,688 tons); Portugal 23 (44,250 tons); Greece 2 (16,380 tons); Turkey 8 (9,478 tons); the remainder being in Peru, the Irish Republic, Mexico, Brazil, and Indonesia. The total included 4 steamers of over 40,000 tons, one each in France, Japan, Sweden, and the U.S.A.; 8 steamers of 30,000-40,000 tons in the U.S.A., 3 in Western Germany, 2 in Italy, 1 each in Japan and the Netherlands, and 2 motorships of this size in France; and 12 steamers of 25,000-30,000 tons in Japan, 5 in the U.S.A., 3 in France, 2 in Western Germany, and 2 steamers and 1 motorship of this size in Sweden.

Tankers building throughout the world numbered 366 of 5,522,289 tons, including 77 (1,150,571 tons) in the U.K., 34 (800,023 tons) in the U.S.A., 42 in Japan (755,550 tons); 37 (592,542 tons) in Italy, 58 (419,762 tons) in Western Germany, 25 (405,350 tons) in the Netherlands, 16 (347,570 tons) in France, 18 (322,795 tons) in Sweden, 15 (212,970 tons) in Norway, 10 (153,490 tons) in Denmark, 12 (130,910 tons) in Spain, and 6 (101,566 tons) in Belgium.

Recent important developments in connexion with shipping and shipbuilding are summarized below under cross-headings:

Air-Conditioning for P. and O. and Orient Liners. The P. and O. and Orient Lines announced on Aug. 7 that they had decided to instal full air conditioning in seven passenger liners built since the end of the war. The ships—the Orient *Orcades, Orsova,* and *Oronsay,* and the P. and O. *Chusan, Himalaya, Arcadia, and Iberia*—are all of 28,000-30,000 tons except the *Chusan* (24,000 tons).

Sale of Canadian-West Indies Fleet. The Canadian Minister of Transport (Mr. George Hees) announced in August that the Government had accepted an offer from the *Banco Cubano del Commercio,* a subsidiary of the *Banco Nacional de Cuba,* to purchase the fleet of Canadian National (West Indies) Steamships Ltd. for $2,800,000. The eight vessels of the fleet would be operated under the Cuban flag by a Havana firm, and would be placed in service between Canada, Cuba, and the West Indies.

Mr. Hees had previously informed the Canadian House of Commons that the ships would be offered for sale, and had explained that they had been out of service since July 4, 1957 as a result of a prolonged strike by their crews. In the meantime merchants and shippers had made other arrangements, and it was "most unlikely" that Canada would be able to resume the West Indies service without incurring heavy losses.

K.P.M. Purchase of Oranjelijn It was announced in Amsterdam in August that the Royal Packet Line (*N.V. Koninklijke Paketvaart Maatschappij,* K.P.M.) had acquired the entire share capital of the *Oranjelijn,* of Rotterdam, which operates services between West European ports and the Great Lakes ports of North America. The transaction was estimated to involve an amount of about 50,000,000 guilders, and was regarded as showing K.P.M.'s determination to find new business to replace the Indonesian inter-insular traffic lost as a result of the Indonesian Government's action (see 16106 A). The *Oranjelijn* has a fleet of 11 small ships, designed for the existing St. Lawrence-Great Lakes system; it also has two larger passenger and cargo ships on order, ready for the opening of the St. Lawrence Seaway in 1960.

Ship Launchings. Ships launched during the quarter included the passenger liner *Rotterdam* (37,000 gross tons), launched by the Rotterdam Drydock Company for the Holland-America Line (Sept. 13); an unnamed tanker of 37,000 tons launched by the *A. G. Weser,* Bremen, for Hr. Hilmar Reksten, Bergen - the largest ship yet built for Scandinavian owners (end-July); and the tanker *British Duchess* (42,000 tons) launched by John Brown and Co. Ltd., Clydebank, for B.P. Tankers Co. Ltd -- the largest tanker yet launched in Britain for British owners (June 2).

The *Rotterdam* is the largest ship yet launched in the Netherlands, her tonnage exceeding that of the transatlantic liner *Nieuw Amsterdam.* Like the latter, she will go into service on the Rotterdam-New York route. (Lloyd's List and Shipping Gazette - Times - External Affairs Department, Ottawa - Netherlands News Agency) **(Prev. rep. 16325 A.)**

B. ANZUS TREATY. — Council Meeting.

A meeting of the ANZUS Treaty Council was held in Washington on Oct. 1, Australia being represented by Mr. R. G. Casey (Minister for External Affairs), New Zealand by Mr. Walter Nash (Prime Minister and Minister of External Affairs), and the U.S.A. by Mr. Dulles, Secretary of State.

A communiqué said that the Ministers had reviewed "events over the last year . . . of interest and concern to the three countries"; had agreed "that militant and subversive Communist expansionism remains the greatest threat to the peaceful progress of the free world", and had expressed their satisfaction "with the opportunities presented by this meeting to strengthen further their close relationships in matters affecting the maintenance of international peace and security."

After referring to the continued growth of SEATO, the statement said that the Council had discussed the Chinese Communist attacks on Quemoy and Matsu and the threats to seize Formosa. It continued. "They agreed that the resort to force and threat of force constitutes a serious menace to the peace of the area and is a matter in which they are therefore deeply concerned. The representatives of Australia and New Zealand, noting that the United States is now engaged in bilateral negotiations with the Chinese Communists in Warsaw in an effort to resolve the crisis and arrive at an arrangement whereby its recurrence might be avoided, affirmed their resolution to support the bringing of these negotiations to a peaceful conclusion. They joined the U.S.A. in calling on the Chinese Communists at once to discontinue their attacks on Quemoy and Matsu in the interests of the peace of the area and as a first step to a peaceful settlement. They hold that, regardless of the merits of the claims and counter-claims of the parties concerned, the use of aggressive force for the purpose of gaining their ends is a violation of the basic principle on which world order depends. . ."

The military representatives taking part in the meeting were Lieut.-General Sir Henry Wells, chairman of the Australian Joint Chiefs of Staff; Air Marshal Sir Frederick Scherger, Chief of the Australian Air Force Staff; Major-General C. E. Weir, Chief of the New Zealand General Staff; and Admiral Barry D. Felt, American C.-in-C. in the Pacific).

The Australian Prime Minister (Mr. Menzies) had previously stated on Sept. 30 that good progress was being made in standardizing equipment for the Australian and U.S. forces. R.A.A.F. front-line aircraft were already largely standardized with U.S. equipment, and the Australian Army was using many items of American pattern, and would eventually be equipped with the F.N. rifle—the standard rifle adopted by all NATO countries. (N.Z. Department of External Affairs - Australian News and Information Bureau - New York Times) **(Prev. rep. Anzus Powers, 13668 A.)**

C. LATIN AMERICA. — Coffee Export Agreement.

Fifteen coffee-producing countries of Latin America signed an agreement in Washington on Sept. 27 controlling the export of their coffee production.

The new agreement replaced the one signed by seven Latin American coffee producers in Mexico City on Oct. 17, 1957. It provided that Brazil (which produces over half the world's coffee) would hold back 40 per cent of her production from the export markets; that Colombia (the second largest producer) would hold back 15 per cent; and that the other participating countries would hold back five per cent of the first 300,000 bags produced and 10 per cent of any production above that amount. It was stated that total Latin-American coffee exports under the new agreement would rise from 26,000,000 bags in the 1957-58 crop year to about 27,500 000, bags in 1958-59, higher exports being permitted particularly to Brazil and Colombia. Altogether, about 12,000,000 bags above world import requirements would be held back from the market, with the aim of stabilizing prices by balancing exports with world consumption.

The 15 signatory countries—together producing 80 per cent of the world's coffee—were Brazil, Colombia, Costa Rica, Cuba, Ecuador, El Salvador, Guatemala, Haiti, Honduras, Mexico, Nicaragua, Panama, Peru, the Dominican Republic, and Venezuela. A. WESTERN GERMANY. — Schleswig-Holstein Elections. - Dano-German Agreement on Representation of Danish Minority.

Landtag elections took place in Schleswig-Holstein on Sept. 28 with the following results :

	1958		1954	
	Seats	Percentage	Seats†	Percentage
Christian Democrats	33	44.4	25	32.2
Social Democrats	26	35.9	25	33.2
Refugee Party	5	6.9	10	14.0
Free Democrats	3	5.4	5	7.5
Danish Minority Party	2	2.8	—	3.5
Others	—	4.6*	4†	7.4‡

*Including German Party 2.8 p.c. and German Reich Party 1.1 p.c.

†At its dissolution the old *Landtag* comprised 27 Christian Democrats, 25 Social Democrats, 5 Refugee Party deputies, and 7 Free Democrats.

†All-German Party.

‡Including German Party 5.1 p.c. and German Reich Party 1.5 p.c.

The Refugee Party (BHE), the German Party, and the German Reich Party all polled below five per cent of the total vote and thus failed to gain any seats. The Danish Minority Party (South Schleswig Electors' Association) also polled less than five per cent, but owing to the special arrangements applying in favour of the Danish minority [see below] gained two seats ; it polled 34,150 votes against 32,262 at the last Federal elections and 42,242 in the 1954 *Land* elections.

The status of the Danish minority in Schleswig-Holstein—and also of the German minority in Denmark—had been regulated three years earlier under an agreement concluded in Bonn on March 29, 1955, between the Federal Chancellor, Dr. Adenauer, and the Danish Prime Minister, Hr. H. C. Hansen. Its provisions were as follows :

(1) The German Federal Government confirmed that the Danish minority in Schleswig-Holstein enjoyed the same fundamental rights and freedoms as all other German nationals, as laid down in the Basic Law of the Federal Republic.

(2) It was specifically confirmed that members of the Danish minority could freely express their adherence to their Danish origin (*Volkstum*) and culture and use the Danish language ; would enjoy the same rights as other German citizens as far as national assistance or other social welfare benefits were concerned ; would be allowed to maintain unhindered their religious, cultural, and professional ties with Denmark ; and would be given adequate broadcasting facilities.

(3) The Federal Government undertook to incorporate in future Federal electoral legislation the existing preferential treatment for national minorities in the electoral law of 1953, whereby such minorities were guaranteed parliamentary representation even if the political parties specifically representing their interests did not poll the minimum of five per cent of the total poll otherwise required for the allocation of seats from party lists.

(4) The *Land* Government of Schleswig-Holstein declared its willingness to introduce legislation to exempt the Danish minority from the effects of the "five per cent" clause in *Land* elections [this legislation was subsequently enacted].

(5) The *Land* Government also undertook to restore to 80 per cent its grant to schools of the Danish minority, and to permit the setting up of schools and people's universities by the minority provided they conformed to the general German educational system and provided courses in German as well as in Danish.

(6) Both the Federal and the *Land* Governments expected all authorities "to respect and preserve the rights of the Danish minority in the spirit of the peaceful co-existence of the border populations and the development of friendly relations between Germany and Denmark in general."

(7) The Danish Government confirmed that the German minority in North Schleswig would enjoy the same fundamental rights and freedoms as other Danish nationals, in accordance with the Danish Constitution and other laws.

(8) Specifically, the Danish Government confirmed that the German minority could freely proclaim their adherence to their German origin and culture and use the German language ; could establish their own schools and people's universities in accordance with Danish legislation ; would be eligible for election to local government bodies in proportion to their numbers ; would be entitled to receive public assistance, etc., on the same terms as other Danish nationals ; could cultivate their religious, cultural, and professional links with Germany ; and would be given adequate broadcasting facilities.

The Hansen-Adenauer agreement followed upon the *Land* elections in Schleswig-Holstein in 1954 (see 13804 A), at which the Danish minority failed to obtain representation in the *Landtag* under the electoral law in force at the time. This absence of representation, together with a cut in grants to Danish minority schools, had aroused much concern in Denmark with regard to the position of the Danish minority. B. UNITED KINGDOM. — Ministerial Changes.

The following ministerial changes were announced on Oct. 23 from 10 Downing Street :

(1) Lord Dundee (56) as Minister without portfolio in succession to Lord Mancroft, who resigned from the Government for personal and family reasons.

The Earl of Dundee (formerly Mr. H. J. Scrymgeour-Wedderburn) was Unionist M.P. for West Renfrewshire from 1931-45, and Under-Secretary of State at the Scottish Office in 1941-42. He will be Government spokesman in the Lords for home affairs in general, while the Earl of Selkirk (First Lord of the Admiralty) will act as Government spokesman on defence matters.

(2) Lord Forbes (41), the premier baron of Scotland, as Minister of State, Scottish Office, in succession to Lord Strathclyde.

Lord Strathclyde (67) resigned from the Government after seven years' service at the Scottish Office and placed his post at the Prime Minister's disposal ; his letter of resignation made it clear that he was in full agreement with the Government's policy. As Commander Galbraith he was formerly Conservative M.P. for Pollok (Glasgow).

(3) Mr. F. J. Erroll (44), M.P. for Altrincham and Sale, as Economic Secretary to the Treasury—a post that had remained vacant since the resignation of Mr. Nigel Birch in January last [see 15939 A]. Mr. Erroll was Parliamentary Secretary to the Board of Trade before his new appointment.

(4) Lord Lansdowne (45), formerly a Lord-in-Waiting, as Joint Parliamentary Under-Secretary of State, Foreign Office, in succession to Lord Gosford.

(5) Mr. J. C. Rodgers (52), M.P. for Sevenoaks, as Parliamentary Secretary to the Board of Trade in succession to Mr. Erroll.

(6) Mr. M. H. C. Hughes-Young (45), M.P. for Wandsworth Central, as a Lord Commissioner of the Treasury in succession to Mr. E. B. Wakefield, M.P.

(7) Lord Gosford (47), formerly Joint Parliamentary Under-Secretary of State, Foreign Office, as a Lord-in-Waiting in succession to Lord Lansdowne.

Lord Gosford—who in effect changed posts with Lord Lansdowne (see above)—will assist the Minister of Transport and Civil Aviation as necessary and will be Government spokesman in the Lords on these subjects. He is Government Whip in the House of Lords.

(8) Mr. E. B. Wakefield (55), M.P. for West Derbyshire, as Comptroller of the Household in succession to Sir Gerald Wills, M.P.

Mr. Wakefield (a Government Whip) was formerly a Lord Commissioner of the Treasury—a post in which he was succeeded by Mr. Hughes-Young as stated above. Sir Gerald Wills resigned as Comptroller of the Household—a post he had held for six years—in order to give maximum attention to his constituency and other political interests. He is M.P. for Bridgwater, Somerset.

Lord Dundee, Lord Forbes and Mr. Rodgers were newcomers to the Government.—(Times - Daily Telegraph)

C. AUSTRALIA. — Loan Issues in London and New York.

An Australian Government loan of £15,000,000 was issued in London on Oct. 15 and was immediately over-subscribed. The loan, bearing interest at 5½ per cent per annum and redeemable in 1975-78, was for works and housing programmes by the Australian Commonwealth and State Governments in 1958-59. It was the first Australian borrowing in London for development purposes since 1929, and the first new money operation by Australia in the London market since 1939. The issue price was 98 per cent.

Commenting on the success of the loan, Sir Arthur Fadden (the Australian Treasurer), told a press conference in London that since the last money loan in 1939 Australian Commonwealth and State Governments had repaid about £122,000,000 (sterling) of London debt, in addition to the repayment of a short-term debt held by the Commonwealth Bank.

In a further loan operation, the Australian Government issued on Oct. 23 a cash loan of $25,000,000 in New York for public subscription, the interest rate being 5 per cent p.a., the issue price 97½ per cent, and the redemption date 1978. This loan—the second to be issued in New York during the current year—was also over-subscribed. (Australian News and Information Bureau - Financial Times - New York Times)

D. WEST INDIES. — Agreement on Canadian Aid.

The agreement implementing the Canadian offer of aid worth $10,000,000 to the West Indies Federation, made during the Commonwealth Trade and Economic Conference in Montreal, was signed in Ottawa on Oct. 19 by Mr. Diefenbaker and Sir Grantley Adams, the two Prime Ministers.

A. MIDDLE EAST. — Dr. Hammarskjold's Middle East Visits. - Report to U.N. General Assembly. - Special U.N. Representative for Jordan. - Withdrawal of British and American Troops from Jordan and Lebanon.

Following his three-day visit to Jordan on Aug. 27-29 (see page 16369), the U.N. Secretary-General continued his mission to Middle Eastern countries by visiting Cairo, Jerusalem, Baghdad, Amman and Beirut during the first fortnight of September—a mission entrusted to him under the terms of the General Assembly's resolution of Aug. 21, which requested Dr. Hammarskjold to make "such practicable arrangements as would adequately help in upholding the purposes and principles of the Charter in relation to Lebanon and Jordan in the present circumstances, thereby facilitating the early withdrawal of foreign troops from the two countries" (see page 16368, first column).

As stated in 16365 A, Dr. Hammarskjold flew from Amman to Geneva to attend the opening of the second U.N. "atoms-for-peace" conference. He resumed his Middle East tour by visiting Cairo on Sept. 3-4 for talks with President Nasser and Dr. Fawzi, after which he had discussions in Jerusalem with Mr. Ben-Gurion (Sept. 6), in Baghdad on Sept. 7 with Brigadier Kassim and other Iraqi leaders, and in Amman on Sept. 8-9 with King Hussein and Mr. Samir Rifai, Prime Minister of Jordan. The U.N. Secretary-General ended his tour with a four-day visit to Beirut (Sept. 9-12), during which he had discussions with General Chehab (the President-elect), M. Chamoun (the outgoing President), and the U.N. Observer Group in Lebanon.

Dr. Hammarskjöld's Report to General Assembly. - U.N. Special Representative in Jordan.

Dr. Hammarskjold returned to New York from the Middle East on Sept. 13, and a week later presented a report on his mission to the General Assembly. This report, published on Sept. 20, was divided into four parts: (1) Practical Arrangements in Relation to Jordan (envisaging *inter alia* the appointment of a special U.N. representative in Amman); (2) Practical Arrangements in Relation to Lebanon; (3) Withdrawals of U.S. and British Forces; and (4) Assistance in Economic Co-operation.

Practical Arrangements in Relation to Jordan.

The Secretary-General began by recalling that the Jordanian Government would not accept the stationing of a U.N. Force in Jordan, nor a border observation group similar to that in Lebanon, this had been made clear to him during his discussions in Amman, and had also been stated by the Jordanian delegate during the General Assembly's emergency session on the Middle East. He himself [i.e. Dr. Hammarskjöld] had also held the view that neither a U.N. Force nor a border observation group would adequately serve the purposes of the U.N. resolution in relation to Jordan, and he had therefore "accepted this stand of the Government of Jordan."

Consequently, his consultations in Amman were limited to discussing measures to implement the pledge of mutual co-operation given by all the Arab States as co-sponsors of the resolution adopted at the Assembly's emergency session. Dr. Hammarskjold said in this connexion: "It was felt that by working in that direction the U.N. would most adequately further all the purposes of the resolution. The spirit and direction of the consultations in Jordan thus corresponded fully to the interpretation of the resolution which I have given in this report."

In his discussions with the Jordanian Government (Dr. Hammarskjöld continued) there was "a wide area of agreement" with regard to "a formula under which the United Nations could assist in relation to Jordan." It was agreed that the most practical way of accomplishing this purpose would be the establishment in Jordan of a U.N. organ which could "keep under purview the adherence of all to the principles set out in the U.N. resolution in relation to Jordan." Accordingly, Jordan had expressed its willingness to serve as a host country for a U.N. representative who would act as the special representative of the Secretary-General. This special representative would assist the Secretary-General "in the implementation of the resolution [of Aug. 12], specifically in upholding the principles and purposes of the Charter in relation to Jordan in the present circumstances."

Dr. Hammarskjöld announced that the Governments of Lebanon and the United Arab Republic had agreed to guarantee the lines of communication of the new "U.N. organ" to be established in Jordan. Moreover, the Lebanese and U.A.R. Governments had also undertaken to grant all necessary facilities for this body, including liaison offices in Beirut and Damascus. As these practical matters had been solved, he had therefore concluded that "the new organ can be stationed in Amman."

The Secretary-General went on to announce that Signor Pier Spinelli (head of the U.N. European Office in Geneva, and a former Italian career diplomat) had already left for Amman to work out "the necessary practical arrangements with the Governments concerned." In due course Signor Spinelli would report on the size and composition of the special representative's staff and other relevant matters.

As regards "the parallel diplomatic arrangements which are necessary in order to give the organ stationed in Jordan its full value," the Jordanian Government had expressed a preference "for diplomatic representatives of the Secretary-General in the capitals of the Arab neighbour countries." The Governments of Iraq and the United Arab Republic, however, had not considered it desirable that such representatives should be stationed in Baghdad and Cairo for the present. The question had not been raised with the Lebanese and Saudi Arabian Governments.

"In my own view," said Dr. Hammarskjold, "the necessary diplomatic arrangements could either take the form suggested by the Government of Jordan or else be achieved through the designation, by the Secretary-General, of an official stationed at [U.N.] Headquarters but going, as necessary, to the capitals concerned for consultations and negotiations . . . I have concluded that . . . the last-mentioned arrangement is the more adequate one."

Dr. Hammarskjöld pointed out that the Jordanian proposal [for U.N. diplomatic representatives in all the Arab capitals] would "lend itself to misunderstandings, as it might be viewed as indicating an intention of the United Nations to establish a 'presence' in various parts of the area going beyond the purposes of the resolution." Such an arrangement, moreover, might "introduce an element of friction and suspicion in the relations between the States concerned and the United Nations." In these circumstances, "the most satisfactory arrangement has seemed to me to be the assignment of a special representative at Headquarters, who would proceed to the area and visit the various Governments on behalf of the Secretary-General as need be." The Jordanian Government had accepted this view, though "maintaining its stand that local diplomatic representation in all the capitals would have been preferable."

There would thus be two officials to assist the Secretary General in securing implementation of the U.N. resolution as it related to Jordan. (1) the Secretary-General's special representative in Amman, who would be in direct contact with the Jordanian Government but not with other Governments in the area; and (2) the special representative at U.N. Headquarters, who would visit the Middle East for discussions with Governments concerned when this was deemed necessary, but who would not be in direct contact with the Jordanian Government.

Finally, Dr. Hammarskjöld said that the reports from the special representative in Amman would not be published "unless the situation were found to call for their circulation as official documents of the United Nations." He added: Such circulation, which might serve as a basis for action by the General Assembly or the Security Council, obviously represents an alternative line of action open to the Secretary-General in such cases as would seem to him to call for stronger measures than diplomatic *démarches*."

Practical Arrangements in Relation to Lebanon.

As regards the Lebanese situation, Dr. Hammarskjöld expressed his conviction that the U.N. Observer Group in Lebanon (UNOGIL) represented "a practical arrangement in the sense of the General Assembly's resolution of Augl 21, 1958, and . . . adequately helps in upholding the purposes of the Charter in relation to Lebanon." In this context "decisive significance" was attached to Part I of the resolution—that is, the development of a "good neighbour" policy to which the Arab Governments had pledged themselves and the present U.N. operation in Lebanon was "considered as helpful in the development of such a policy." After the withdrawal of foreign troops from Lebanon, the question of UNOGIL, or of alternative or additional arrangements, would have to be considered "in the light of the degree of success with which the implementation of Part I of the resolution of Aug. 21, 1958, has met."

In finding that no additional arrangements were needed in Lebanon (Dr. Hammarskjöld continued), it had been recognized that the terms of reference of UNOGIL "precluded it from reporting on all the possible departures from a satisfactory implementation by the Arab States of the principles of the resolution in relation to Lebanon." The Secretary-General commented in this connexion: "This marks a basic difference between the Observation Group on Lebanon and the proposed arrangement in relation to Jordan. The Observation Group must follow any infiltration and smuggling of arms, and its reports are public. The special representative in Jordan should follow any departures from the principles of the resolution and report to the Secretary-General, but his findings would not be public unless their nature would seem to call for the circulation of a report in the United Nations."

Withdrawals of U.S. and British Forces.

After pointing out that the U.S. and Lebanese Governments were discussing a schedule for the withdrawal of American forces from Lebanon [see page 16441, second column], Dr. Hammarskjöld said that he had been officially informed that the U.S. forces would be totally withdrawn from the country by the end of October, "provided the international security situation with respect to Lebanon continues to improve in the framework of a successful implementation of Part I of the resolution of Aug. 21, 1958."

Similarly, he had also been officially informed that the British and Jordanian Governments were discussing a schedule for the withdrawal of British troops from Jordan, which would "begin during the month of October and be completed as quickly as the situation in the area allows."

The Secretary-General referred to memoranda which he had received from the U.S. and British Governments on the question of troop withdrawals [see below].

Assistance in Economic Co-operation.

In conclusion, Dr. Hammarskjöld said that during his consultations in the Middle East he had "touched upon the question of possible assistance regarding an Arab Development Institution," referred to in the Assembly's resolution of Aug. 21, 1958. In identical letters to the ten Arab Governments co-sponsoring the resolution, he had expressed the willingness of the U.N. Organization to assist in any joint economic efforts and had invited those Governments "to study the results of certain studies undertaken jointly by the International Bank and the U.N. Secretariat."

The Secretary-General added: "From my contacts, I drew the conclusion that, while there was a widespread interest in a constructive approach to the development problem along the lines on which the Arab League had already embarked, it was felt that a successful re-activation of economic co-operation might require that some further progress should be made in the political field, and also that financial surpluses should become available from national sources beyond what, in view of imperative domestic needs which have to be met, seemed likely within the immediate future. In these circumstances, I believe that the information given in the letter referred to above represents what for the moment the U.N. can usefully contribute in furtherance of the aim mentioned in Part III of the resolution. On the basis of this information, the Arab Governments may now themselves evaluate what assistance they might wish to seek in pursuance of this part of the resolution."

U.S. and British Memoranda on Troop Withdrawals from Lebanon and Jordan.

As stated by the Secretary-General, the U.S. and British Governments had previously sent memoranda to Dr. Hammarskjöld officially notifying him of their intention to withdraw their forces from Lebanon and Jordan respectively, in agreement with the Governments of the two countries. The memoranda were worded as follows:

American Memorandum.

"In view of improvements in the international aspects of the Lebanese security situation owing to the steps which have been taken, it has been possible for the U.S. Government, in agreement with the Lebanese authorities, to withdraw a portion of its forces. The U.S. Government has now been informed by the Secretary-General of his view, shared by the Lebanese authorities, that the U.N. Observation Group . . . presents a satisfactory practical arrangement within the meaning of the General Assembly's resolution of Aug. 21, 1958, and in present circumstances is, or can be made, adequate to uphold the purposes and principles of the Charter in relation to Lebanon.

"The U.S. Government has also been informed by the Secretary-General of the planned augmentation of the Observation Group and of his view, likewise shared by the Lebanese authorities, that for the time being it is unnecessary to consider any additional practical arrangements under the Assembly resolution of Aug. 21 with regard to Lebanon.

"In view of the above, the U.S. Government has informed the Secretary-General that it is discussing with the Government of Lebanon a schedule for the completion of the withdrawal of U.S. forces. It is the intention of the U.S. and Lebanese Governments that the total withdrawal of U.S. forces shall begin in the near future and be completed as expeditiously as possible, we hope by the end of October . . ."

British Memorandum.

"H.M. Government in the United Kingdom have taken note of the arrangements which the Secretary-General is making, in agreement with the Governments directly concerned, for the stationing of a U.N. Representative in Amman, for the establishment of Liaison Offices in Beirut and Damascus, and for the appointment of a diplomatic agent to maintain such contact as may be necessary between the Secretary-General and the Arab capitals other than Amman. The U.K. Government understand that the object of these measures is to keep under continuous review the implementation of the resolution of Aug. 21 in relation to Jordan and to provide means, in the event of a failure to implement the resolution, for the United Nations to take appropriate action.

"The U.K. Government have been informed by the Secretary-General that the Governments concerned have expressed their intention to conduct their relations with Jordan in accordance with the Resolution of Aug. 21, and in particular have expressed their willingness to restore Jordan's normal communications by land and air across their territories.

"The U.K. Government have accordingly informed the Secretary-General that, taking this information into account, they are discussing with the Government of Jordan the fixing of dates for the beginning and completion of the withdrawal of British forces. It is the intention of the U.K. and Jordanian Governments that . . . the withdrawal shall begin during the month of October and that it shall be completed as quickly as the situation in the area allows."

The American memorandum was sent to the U.N. Secretary-General on Sept. 27, and the British memorandum on the following day.

British Withdrawal from Jordan. - Last American Troops leave Lebanon.

In a speech to the Jordanian Parliament on Oct. 1, King Hussein announced that the British troops in Jordan would begin their withdrawal on Oct. 20 under an agreement with the U.K. Government. The King stated that this agreement had been reached because of his Government's belief that the spirit of Arab unity would prevail, as expressed in the U.N. resolution of Aug. 21.

King Hussein, who was opening a new session of Parliament, said that Jordan had stood firm and maintained her independence against the "allies, agents and hirelings of atheistic Communism" who had sought to destroy the country's integrity by interfering in its internal affairs and by "resorting to various means of direct and indirect acts of aggression." Jordan had been forced to seek military aid from friendly Powers to withstand this threat, and would redouble her efforts to strengthen her armed forces by all possible means. Nevertheless, he was convinced that the "untoward behaviour" on the part of some of Jordan's Arab neighbours would "soon disappear when our sister-countries realize that the continuation of such a course would not be conducive to the higher interests of the Arabs." Jordan, for her part, considered herself completely bound by the U.N. resolution and had taken immediate steps to implement it "*in* the letter and the spirit."

It was announced from U.N. Headquarters on Oct. 19 that, on the initiative of the British Government and in agreement with other Governments concerned, the United Nations had undertaken to help in the air-lift of British troops from Amman to Nicosia (Cyprus), to be carried out in a four-day operation between Oct. 25 and 29. For this purpose Dr. Hammarskjold had nominated Major-General Odd Bull (member of the three-man U.N. Observer Group in Lebanon) to organize the air movement control needed for this purpose at the Amman, Damascus and Beirut airports.

Major-General Bull accordingly flew to Amman and Damascus to make the necessary arrangements with the Jordanian and U.A.R. authorities, and also flew to Nicosia for similar discussions with the British authorities. The U.A.R. and Lebanese Governments gave their consent for British planes to fly over their territories, and the airlift began as scheduled on Oct. 25; it was completed without incident on Oct. 29, by which date practically all the British forces in Jordan (about 2,000) had been withdrawn to Cyprus or the United Kingdom. Some of the troops, together with much material and equipment, were withdrawn by sea from Akaba on Oct. 20 and subsequent days, the seaborne evacuation being completed by Nov. 2.

The last of the 14,000 American troops in Lebanon (see page 16441, second column) were withdrawn by Oct. 26.

Dr. Hammarskjöld's Proposals for "Stand-by" U.N. Force for preserving Peace. - Report on U.N. Emergency Force. - Present Strengh of UNEF.

In a report to the General Assembly on Oct. 15, the U.N. Secretary-General had recommended the creation of a U.N. "stand-by force" which could be brought quickly into being to meet specific "conflict situations" which might arise. He did not, however, recommend the setting-up of a regular U.N. Force, which, in his view, would have no great practical value and would "not warrant the substantial sacrifices involved."

Dr. Hammarskjöld's report (a 75-page document) was presented as a study of the lessons learned as a result of the creation of the U.N. Emergency Force in the Middle East (UNEF) at the time of the Suez crisis. He emphasized that, in a practical sense, it was not feasible in advance of any known situation to do more than provide for "stand-by" arrangements based on "those general conclusions which can be reached in the light of UNEF's experience." The "uniqueness of the UNEF setting" in the context of the Suez crisis explained, in part at least, "the success of this pioneer venture," but neither in Lebanon nor in Jordan would it have been possible to interpose a U.N. Force between the conflicting parties. In Lebanon, it was unlikely that a U.N. Force would have operated without becoming a party to the internal conflict within the country, while in Jordan the presence of a U.N. Force would have been regarded by the Jordanian Government as irreconcilable with its exercise of full sovereignty.

The U.N. experience in the three Middle East crises—Suez, Lebanon and Jordan—therefore "justifies the assumption that, in each new conflicting situation in which the U.N. might be called upon to intervene with military personnel, the nature of the actual organ required and its para-military aspects would be determined by the particular needs of the situation and could not therefore be anticipated." For this reason the General Assembly should show "flexibility" in approaching this question, and should "attempt to do no more than endorse certain basic principles and rules which would provide an adaptable framework for later operations that might be found necessary."

The Secretary-General recommended "certain principles and rules"—drawn from the UNEF experience in the Middle East—which would "provide a continuing basis on which useful contacts in a stand-by context might be established with the interested Governments." These were:

(1) The U.N. should not station units on the territory of a State without the consent of the Government concerned.

(2) Units from the permanent members of the Security Council should not be included in such a force, nor should units from "any country which might be considered as possibly having a special interest in the situation." [That is, any "standby" U.N. force would not contain American, British, Soviet, French or Chinese units.]

(3) Men serving with the force who were involved in criminal actions in the host country should come under the jurisdiction of the criminal courts of their home countries.

(4) U.N. personnel should not be a party to internal conflicts, nor used to enforce or influence any specific political solution of pending problems.

(5) A U.N. operation should always be under a leadership established by the General Assembly or the Security Council, or on the basis of authority delegated by the Secretary-General.

The Secretary-General had previously submitted a report on the progress of the U.N. Emergency Force in the Middle East (Sept. 6) in which he stated that "virtually unbroken quiet" prevailed along the entire frontier between Egypt and Israel. The present strength of UNEF was 5,445 officers and other ranks, grouped in 68 platoons and containing contingents from eight countries—1,167 from India, 975 from Canada, 674 from Yugoslavia, 635 from Brazil, 538 from Norway, 505 from Sweden, 492 from Colombia, and 459 from Denmark. UNEF had suffered 27 fatal casualties since its formation, resulting mainly from accidental shootings, encounters with mines, and traffic accidents.

Whilst UNEF was "well organized and functioning smoothly," Dr. Hammarskjold noted that the U.N. Organization might "not be in a position to honour promptly or in full its obligations to the Force unless substantial payments are received in the near future." Of the total amount assessed for payment of UNEF expenses by member-governments in 1958, only $10,300,000 (or 41 per cent of the required amount) had been received to the end of July, and 62 U.N. members had so far made no payments whatever.—(U.N. Information Centre, London - Times - Daily Telegraph - Manchester Guardian - New York Times) **(Prev. rep. Middle East Crisis, 16305 A; U.N. Emergency Session, 16365 A; Lebanese Situation, 16439 A)**

A. ALGERIA.—Indonesia recognizes "Free Algerian" Government. - Indian Attitude towards Recognition.

Mr. Nehru said at a press conference in Delhi on Oct. 12 that while India was "anxious that Algerian independence should be recognized," his Government would "not for the present" give formal recognition to the "Free Algerian" government established in Cairo. He added: "It may well be said that at present there is what is called the Provisional government of Algeria, representing moderates and extremists, and therefore it should be easy to deal with them as representing Algerian nationalism. I hope that the French Government will negotiate with these people, because it is obvious that there is no other way of settling the Algerian problem except by recognizing Algerian freedom."

The "Free Algerian" government was officially recognized by Indonesia on Sept. 27.—(Indian High Commissioner's Office, London - Indonesian Embassy, London)

(Prev. rep. 16410 A.)

B. SPAIN. — Water Development Projects.

General Franco inaugurated on July 14 the Entrepeñas-Buendia reservoirs, a few miles west of Guadalajara, which will increase Spain's water storage capacity from 15,000 million cubic metres (the present level) by an additional 2,480 million cubic metres, and will enable the waters of the Tagus and Guadiela rivers to be used for irrigating some 400,000 acres of land. The cost of the two dams—claimed to be the largest in Europe—was estimated at 748,000,000 pesetas. Existing plans provide for the construction of hydro-electric stations fed from the waters of the reservoirs, which it is hoped will encourage the establishment of new industries.

Under the Spanish Government's programme, the country's water storage capacity (in 1939 only 4,000 million cubic metres) is eventually expected to reach 38,000 million cubic metres. Ninety reservoirs with a capacity of 12,000 million cubic metres are at present under construction.

C. UNITED NATIONS. — Opening of 13th Session of General Assembly. - Dr. Malik elected Assembly President. - Security Council Elections.

The 13th session of the U.N. General Assembly opened in New York on Sept. 16, when Dr. Charles Malik (then Foreign Minister of Lebanon) was elected President of the Assembly in succession to Sir Leslie Munro (New Zealand). Dr. Malik received 45 votes against 31 for Mr. M. A. Mahgoub, Foreign Minister of the Sudan; four countries abstained from voting, while Israel's delegation was absent because of the Jewish New Year. The Czechoslovak delegation withdrew the candidature of Dr. Jiri Nosek (Czechoslovak Ambassador to India and Ceylon) in favour of Mr. Mahgoub.

Dr. Charles Malik (52) was educated at the American University in Beirut and took a doctorate of philosophy at Harvard; he later returned to Beirut as professor of history in the American University and head of the department of philosophy. A prominent figure at the United Nations for many years, he has represented Lebanon at every General Assembly session since the founding conference in San Francisco in 1945. Consistently pro-Western in outlook, he played a leading part in the recent U.N. debates on the Lebanese situation and presented his country's case alleging intervention by the United Arab Republic in Lebanon's internal affairs. He ceased to be Foreign Minister of Lebanon in the governmental reorganization which followed the election of President Chehab (see 16447 G, 16439 A). Dr. Malik is a member of the Greek Orthodox Church.

The following elections (all unanimous) were made to the chairmanship of the Assembly committees:

Political and Security Committee..	Señor Miguel Rafael Urquia (El Salvador)
Special (*ad hoc*) Political Committee	M. Mihai Magheru (Rumania)
Economic and Financial Committee	Mr. Toru Hagiwara (Japan)
Social, Humanitarian and Cultural Committee	Mme. Lina Tsaldaris (Greece)
Trusteeship Committee	Mr. Fredrick H. Boland (Irish Republic)
Administrative and Budgetary Committee	Sir Claude Corea (Ceylon)
Legal Committee	Señor Jorge Castaneda (Mexico)

Italy, Argentina and Tunisia were elected to the Security Council on Oct. 8 to fill the places of Sweden, Colombia and Iraq, whose two-year terms expire on Dec. 31, 1958. All three countries were elected on the first ballot, 78 votes being cast for Argentina, 76 for Italy and 74 for Tunisia; two votes were cast for Persia, and one each for Greece and Finland.

From Jan. 1, 1959, the Security Council's membership will be: Argentina (until Dec. 31, 1960), Canada (until Dec. 31, 1959), China (permanent), France (permanent), Italy (until Dec. 31, 1960), Japan (until Dec. 31, 1959), Panama (until Dec. 31, 1959), Soviet Union (permanent), Tunisia (until Dec. 31, 1960), United Kingdom (permanent) and United States (permanent).—(U.N. Information Centre, London)

D. AUSTRALIA. — Legislation to prevent Abduction of Children from Australia.

The Federal Minister for Immigration (Mr. Downer) announced on Oct. 4 that legislation recently passed by the Federal Parliament to enable parents to prevent their children from being taken out of Australia in defiance of court orders would come into effect on Nov. 10. The Act—the proclamation of which had been deferred to give shipping and airline companies time to prepare for it—provided that when a child's custody was the subject of a court order or of pending court proceedings, the parent could notify shipping and airline companies of this fact by making a statutory declaration. The companies would then have a legal obligation not to remove the child from Australia without the permission of the court.

The legislation followed two cases in which U.S. fathers had taken their children out of Australia without the consent of their Australian mothers; in one case this was done in defiance of a court order giving sole custody of the child to the mother.

E. PORTUGAL. — Creation of Development Bank.

It was announced in Lisbon on Oct. 13 that the Portuguese Government had decided to set up a development bank to help in the implementation of the current six-year development plan. The bank will be a limited company with an initial capital of 1,000,000 contos (about £12,000,000), and will grant credits to industrial and agricultural organizations as well as to overseas organizations. Its capital will be provided by the Portuguese Government and the overseas territories of Angola and Mozambique.—(New York Herald Tribune)

NOVEMBER 1—8, 1958

A. VATICAN. — Election of Pope John XXIII.

Cardinal Angelo Giuseppe Roncalli (76), Patriarch of Venice, was elected to the Papal throne by the College of Cardinals on Oct. 28 in succession to the late Pope Pius XII. The new Pope—the 263rd Pontiff of the Holy Roman Church in succession from St. Peter—took the title of John XXIII.

Pope John XXIII was born on Nov. 25, 1881, at the village of Sotto il Monte, near Bergamo (northern Italy), the son of a peasant family of humble origin. Ordained in 1904, he was secretary to the Bishop of Bergamo for ten years, served as a chaplain in military hospitals during the First World War, and subsequently taught at the Bergamo diocesan seminary until he was called to Rome in 1921 to take up the post of president of the Italian Society for the Propagation of the Faith.

In 1925 Mgr. Roncalli (as he then was) became Apostolic Visitor to Bulgaria—the beginning of a distinguished career in the Papal diplomatic service—shortly after his consecration as titular Bishop of Areopolis. He was later appointed the first Apostolic Delegate to Bulgaria, and served in Sofia for ten years before his appointment in 1935 as Apostolic Delegate to Turkey and Greece. He held the latter appointment until towards the end of the Second World War, serving concurrently as Apostolic Administrator of the Latin Vicariate of Constantinople. During his 20 years in the Balkans—first in Sofia and later in Istanbul—he established cordial relations with the Orthodox churches of the countries to which he was accredited, became an authority on Balkan and East European affairs generally, and was highly regarded by Catholics, Orthodox Christians and Moslems alike; when he was made a cardinal in 1953, the Turkish Government took the unprecedented step for a Moslem country of sending him official congratulations.

In December 1944 Mgr. Roncalli was appointed the first Papal Nuncio to liberated France in succession to Mgr. (now Cardinal) Valerio Valeri, who had been Nuncio to the Vichy Government and whose recall had been requested by the Provisional Government of General de Gaulle. As Nuncio in Paris from 1945 to 1953 Mgr. Roncalli established close and cordial relations with General de Gaulle, President Vincent Auriol, M. Edouard Herriot, and other leading personalities of the Fourth Republic; he was highly esteemed by French political leaders both of the Right and the Left and became a close personal friend of President Auriol, from whom (in accordance with diplomatic tradition) he received the biretta when he was raised to the College of Cardinals in 1953. The esteem in which Cardinal Roncalli was held in France, both by the nation's political leaders and by the Roman Catholic hierarchy in that country, was marked by the conferment of the Grand Cordon of the Legion of Honour when he relinquished his appointment as Nuncio.

As Patriarch of Venice, Cardinal Roncalli was extremely popular with the people of that city, particularly for his great interest in social questions and his advocacy of social justice for the workers. His concern for the welfare of the workers was evidenced in his patriarchal Christmas message of 1955, in which he said: "There are three things which call for our brotherly aid: poverty, unemployment, and the dismissal of workers. It is tragic to read that factories are being shut down and workers placed on short time or even dismissed. . . . I appeal to industrial leaders, to the technicians and economists, and beseech them in the name of the Almighty to remember that intelligence and wealth were placed at their disposal, not to balance books, but to help them to be ministers of Providence to the advantage of the human family. . . ."

At the time of his election as Supreme Pontiff, Cardinal Roncalli was a member of the Sacred Congregation for the Oriental Church, the Congregation for the Propagation of the Faith (*Propaganda Fide*), and the Congregation of Religious. He has written a number of scholarly works, including a life of St. Charles Borromeo and a five-volume history of the Bergamo diocese in the 16th century.

As stated in 16431 A, the College of Cardinals numbered 55 at the death of Pope Pius XII. The actual number of cardinals taking part in the election of his successor was 51, owing to the deaths of Cardinal Costantini and Cardinal Mooney before the election, the inability of Cardinal Stepinac to leave Yugoslavia, and the Hungarian Government's refusal to allow Cardinal Mindszenty to leave the American Legation in Budapest and travel to Rome. The Primate of Poland (Cardinal Wyszynski) was given an exit visa by the Polish Government and took part in the Conclave.

Cardinal Celso Costantini (82) died on Oct. 17, only a week after Pope Pius. A member of the Curia (the central government of the Roman Catholic Church), he was Chancellor of the Holy Roman Church and titular Archbishop of Theodosia. Cardinal Edward Mooney (76), Archbishop of Detroit, died on Oct. 25, a few hours before the Papal election; one of the three American cardinals, he had made the journey to Rome although he had been in ill-health for some time previously.

At the request of the Sacred College, the U.S. Government had asked the Hungarian Government to allow Cardinal Mindszenty to leave Hungary under safe-conduct so that he could take part in the Papal election. The request was rejected by the Hungarian Government on the ground that it constituted "gross interference in Hungary's internal affairs." [Since November 1956 Cardinal Mindszenty has been in the U.S. Legation in Budapest, where he took refuge after the suppression of the Hungarian revolt.]

The Papal election was carried out under a new Apostolic Constitution drafted by the late Pope Pius XII in 1945, in place of the former Constitution which had been drawn up by Gregory X in 1274 and had remained substantially unaltered for nearly 700 years. The Gregorian Constitution was amended by Pope Pius in two important respects: (1) a majority of two-thirds plus one of the members of the College of Cardinals (i.e. of those cardinals actually present and voting) was required for the election of a Pope, instead of a two-thirds majority as hitherto; (2) the members of the College of Cardinals were no longer required to sign their ballot-papers when taking part in Papal elections.

While the Gregorian Constitution required a two-thirds majority of the College of Cardinals for the election of a Pope, there was a proviso that if the successful candidate had voted for himself and his vote gave him the required majority, the election would be invalid. This had made it necessary for all members of the Sacred College to sign their ballot-papers when taking part in Papal elections.

The College of Cardinals met in Conclave on Oct. 26 to elect Pope Pius's successor. In accordance with tradition, the Conclave took place in the Sistine Chapel, an adjacent part of the Vatican Palace being converted into small apartments or cells for the electors, who, with a strictly limited number of attendants, were completely sealed off from the outside world. Four ballots, all inconclusive, were held on Oct. 26; another four inconclusive ballots on Oct. 27; and four more ballots on Oct. 28, in the last of which Cardinal Roncalli obtained the required majority of two-thirds plus one—i.e. the new Pope was elected on the 12th ballot.

As is customary in Papal elections, the results of the ballots were conveyed to the vast crowds gathered outside St. Peter's by the emission of smoke from a chimney of the Sistine Chapel—black smoke indicating that the ballot had been inconclusive, and white smoke that a Pope had been elected. [This procedure is described in 3467 A]. No details of the voting are ever made public, all the ballot-papers being burned after counting and scrutiny.

The election of Pope John was announced to an enthusiastic crowd of 300,000 in St. Peter's Square by Cardinal Canali (the senior Cardinal Deacon) in the traditional formula: *Annuntio vobis gaudium magnum; habemus Papam, eminentissimum et reverendissimum dominum Angelo Giuseppe Roncalli, qui sibi nomen imposuit Johannes.* ("I announce to you tidings of great joy; we have a Pope, the most eminent and most reverend cardinal Angelo Giuseppe Roncalli, who has taken the name of John.")

After receiving the homage of the College of Cardinals, Pope John XXIII appeared on the balcony over the great porch of St. Peter's to give the traditional blessing *Urbi et Orbi* ("To the City and the World.") The new Pope received world-wide congratulations from Heads of State and Heads of Governments.

The last Pope to bear the name John reigned over 600 years ago; a Frenchman, he was one of the popes of the Avignon exile and reigned in that city from 1316 to 1334. The history of the Church also records a John XXIII who was an "anti-pope" and was illegally elected to the papal throne in 1410; he was deposed in 1415 and subsequently submitted to his legitimate successor, Martin V.

Within three hours of his election, Pope John created his first cardinal by conferring the Red Hat on Monsignor Alberto di Jorio, the secretary of the Conclave—thereby bringing the membership of the Sacred College to 53, which is 17 less than its full complement. [Cardinal di Jorio has had long experience in the Vatican administration, and was acting Secretary of State during the interregnum between the death of Pope Pius XII and the election of Pope John XXIII]. On the following day the Pope reappointed Mgr. Tardini as Pro-Secretary of State.

Pope John's First Broadcast to the World.

Pope John XXIII made his first broadcast to the world on Oct. 29. Addressed primarily to the rulers of the nations, it was pre-eminently a plea for world peace based on justice in freedom, and was worded as follows:

"This hour of trepidation, in which by the will of Divine providence there has been imposed upon us the grave burden of the Supreme Pontificate after the death of our predecessor Pius XII, of immortal memory, oppresses and bears down our heart. We raise most fervent prayers to God that He may give strength to our weakness, illuminate our mind, and refresh our will.

"We embrace with great affection the most loved members of the Sacred College . . . and we turn specially to those among them who, to our sorrow, are far from us [i.e. Cardinals Mindszenty and Stepinac] and whose sufferings and tribulations so profoundly move us. . . .

"We pray to God for all those who are our children in Christ, but particularly for the poor and for those who suffer. . . . Specially dear to our heart among our children are the faithful of the Venetian region, where we have carried on the pastoral ministry, and of the Bergamo diocese, where we were born.

"But our thoughts go out in special manner to all the faithful in those nations where the Catholic religion is not free, or free only in part; where the sacrosanct rights of the Church are trampled upon; where the legitimate pastors are exiled, relegated, or prevented from carrying out their ministry freely. We wish them to know that we share with them their pains, their tribulations, their bitterness; that we implore the Lord that He may put an end to such inhuman persecutions, which not only undermine the tranquillity and prosperity of those peoples but which are in open contrast with modern civilization and with the rights of man, long since acquired. May God illumine the minds of the rulers of those nations; may He pardon the persecutors. . . .

"As we embrace the Western Church, so with equal paternal affection do we embrace the Eastern Church, and at the same time we open our heart and our arms to all those who are separated from this Apostolic See. . . . We ardently desire their return to the house of the common Father. . . .

"May we now address our appeal to the rulers of all the nations, in whose hands are the fate, prosperity, and hopes of individual peoples. Why do they not compose their quarrels and dissensions, finally and with justice? Why are the resources of human genius and the riches of the peoples devoted more often to turning out pernicious instruments of death and destruction than to increasing the welfare of all classes of citizens, and particularly of the poorer classes?

"We know that there are grave and intricate problems which must be overcome to carry out a programme so praiseworthy, and to smooth out the points of discord. But these difficulties must be victoriously overcome, even at the cost of great effort. Set to work, therefore, with courage and faith. . . . Turn your eyes on the peoples who are entrusted to you, and hear their voice. What are they asking of you, what are they supplicating? They are asking not for those monstrous instruments of war, discovered in our times, which can cause fratricidal destruction and universal massacre, but for peace—a peace under which the entire human family can live freely. They want justice, which will finally bring together the reciprocal rights and duties of all classes in a just solution. Finally, they ask for tranquillity and concord, from which alone true prosperity can emerge. . . .

"True peace cannot be given to individuals, peoples, and nations if peace is not first in their souls. There can be no exterior peace if it is not the reflection of an interior peace, and if it is not directed by this interior peace. . . . May this truth be remembered by those who reject the Name of God, who trample on His sacred rights, who strive to lead man away from piety towards Him. . . ."

Coronation of Pope John.

The Coronation of Pope John XXIII took place at St. Peter's on Nov. 4, the ceremony being televised for the first time throughout Italy and, via the Eurovision network, to many countries in Western Europe.

Delegations from 59 countries attended the ceremony, including all the diplomatic representatives accredited to the Holy See. Among those present were the Duke of Norfolk (Earl Marshal of England), representing Queen Elizabeth II; Mr. de Valera, Prime Minister of the Irish Republic; M. Pierre Pflimlin, representing the French Government; Dr. Castiella, the Spanish Foreign Minister; Prince Albert of Liège, representing the King of the Belgians; Mr. Joseph Luns, Foreign Minister of the Netherlands; Dr. von Brentano, Foreign Minister of the German Federal Republic; Dr. Raab, the Austrian Chancellor; M. Celio, formerly President of the Swiss Confederation; M. Hussein Oweimi, Foreign Minister of Lebanon; and Prince Felix of Luxemburg. The United States was represented by Mr. James Mitchell (Secretary of Labour), Mr. Robert D. Murphy (Under-Secretary of State) and Mrs. Clare Boothe Luce, formerly Ambassador in Rome.

All the cardinals taking part in the Papal election were present, together with Archbishops and Bishops of the Roman Catholic Church from all parts of the world. The Coronation was also attended by the three living brothers of Pope John (peasant formers in the village of Sotto il Monte, the Pope's birthplace), the Pope's sister, and a number of nephews and nieces

The titles borne by Pope John XXIII are: "Bishop of Rome; Vicar of Jesus Christ; Successor of St. Peter, Prince of the Apostles; Supreme Pontiff of the Universal Church; Patriarch of the West; Primate of Italy; Archbishop and Metropolitan of the Roman Province; and Sovereign of the State of Vatican City." (Universe - Catholic Times - Le Monde - Times - Manchester Guardian - New York Times)

A. JAPAN. — World's Highest Tower built in Tokio.

The construction of the highest tower in the world was completed in Tokio on Oct. 14. Known as Tokio Tower, it is 1,085 feet high (86 feet higher than the Eiffel Tower in Paris) and houses four television stations and a six-storey science museum. (Japanese Embassy Press Office, London)

B. SOVIET UNION - UNITED ARAB REPUBLIC. — Soviet Aid for Aswan Dam Project.

M. Khrushchev announced on Oct. 23 that the Soviet Government, in response to a request from the United Arab Republic, had agreed to grant the U.A.R. a credit of up to 400,000,000 roubles (£33,000,000 at the official rate) for expenses connected with the delivery of machines, equipment, and other materials for the first stage of the Aswan Dam project. In addition, the U.S.S.R. would provide technicians and experts. The announcement was made at a Kremlin reception in honour of Marshal Hakim Amer (a Vice-President of the U.A.R., and Defence Minister) who had arrived in Moscow on Oct. 19 for talks with leaders of the Soviet Government. M. Khrushchev's statement was worded as follows:

"This visit is a fresh confirmation of the fact that the friendly contacts between the leaders of the Soviet Union and the United Arab Republic are, to an ever increasing extent, developing into a good tradition . . .

"The Soviet Government has considered the request you [Marshal Amer] have conveyed from the Government of the U.A.R. for aid in the construction of the first section of the Aswan Dam. Proceeding from the friendly relationship between our two countries, and desirous of strengthening it, the Soviet Government has agreed to take part in the construction of the first section of the Aswan Dam, a project which is of great importance to the national economy of the U.A.R. and to the consolidation of its national independence. The Soviet Government is willing to delegate the necessary number of specialists to the U.A.R., to supply the U.A.R. with machinery and equipment and with the materials it lacks for the accomplishment of this project, and to grant a loan of up to 400,000,000 roubles for covering the expenses involved.

"Repayment of the Soviet Union's investment in this project will begin on the completion of the first stage of the construction. In response to the wishes of the Government of the U.A.R., we agree to send specialists to Cairo in the near future to discuss with your competent representatives the details of this project, and to draft an appropriate agreement between our two countries."

M. Khrushchev went on to say that the Soviet Government's discussions with Marshal Amer "on a number of international problems" were "bound to promote and cement the bonds of friendship between our two countries." He added: "As in previous discussions between Government leaders of the Soviet Union and the U.A.R., our views are unanimous on current international problems of decisive importance for the preservation and consolidation of world peace . . . The Soviet Union and the U.A.R. maintain a common stand at the United Nations on disarmament, the banning of nuclear weapons, the ending of nuclear tests, and other important questions connected with safeguarding international peace and security. We are unanimous in recognizing that the main task . . in the Middle East at present is to secure the earliest possible withdrawal of American troops from Lebanon and of British troops from Jordan, and to ensure the peace and tranquillity essential for the creative work of the population of the Arab countries in developing their national economies and raising their cultural and living standards."

In October 1955 the Soviet Union was stated to have offered the Egyptian Government a loan of $200,000,000 towards the cost of building the Aswan Dam [see 14486 B], but subsequent statements by M. Shepilov, then Soviet Foreign Minister, had made it clear that the matter was not being further pursued for the time being [see 14991 A].

The complete Aswan Dam project was estimated in 1956 — during the Egyptian negotiations with Britain, the U.S.A., and the World Bank—to cost £460,000,000. The U.S. Government had at the time offered a grant of about $55,000,000 towards the foreign exchange costs of the first stage of construction, whilst the British Government had offered about $15,000,000 and the World Bank a further $200,000,000. These offers were withdrawn in July 1956—a decision which was immediately followed by the Egyptian nationalization of the Suez Canal.

In July 1957 President Nasser had announced a revised project for the Aswan Dam which aimed at increasing Egypt's cultivable acreage by 16 per cent, or about 1,000,000 acres, over five years [see page 15780, end of first column]. The first phase of the revised project was estimated to cost about £E.60,000,000.—(Soviet Embassy Press Department, London - Times - Daily Telegraph) **(Prev. rep. Aswan Dam Project, 15730 A; 15001 A; 14991 A.)**

C. UNITED KINGDOM. — Brookwood Memorial.

A war memorial commemorating 3,500 men and women of the Commonwealth land forces who lost their lives in the Second World War and have no known graves was unveiled by H.M. the Queen on Oct. 25 at the Brookwood military cemetery, Surrey. The Brookwood Memorial is a circular colonnade of Portland stone, the names of those commemorated being inscribed on 28 green slate panels.—(Times) **(16198 A.)**

A. UNITED KINGDOM. — Ending of Compulsory Arbitration in Industrial Disputes. - Abolition of Industrial Disputes Tribunal.

Mr. Macleod, the Minister of Labour, announced at a meeting of the National Joint Advisory Council on Oct. 22 that compulsory arbitration for settling industrial disputes on wages and conditions would be brought to an end, and the Industrial Disputes Tribunal abolished. Although the exact date for the termination would be announced later, it was expected that it would be within the next six months.

Compulsory arbitration was introduced in 1940 by the late Mr. Ernest Bevin (then Minister of Labour) under the Conditions of Employment and National Arbitration Order (see 4165 H). This Order at the same time made strikes and lock-outs illegal and bound all employers—even those outside the employers' organization in an industry, and therefore not parties to any settlement—to observe terms and conditions not less favourable than those recognized for the industry in question. In 1951 the Order of 1940 was replaced by the Industrial Disputes Order, following trade union opposition to the continued prohibition of strikes. The 1951 Order replaced the National Arbitration Tribunal by the Industrial Disputes Tribunal and, in addition to other minor changes, re-legalized strikes and lockouts.

The machinery of the Industrial Disputes Order was compulsory in two ways: (1) it made it possible for an unwilling party to be forced to arbitration by an Order of the Minister of Labour, the Minister being bound to issue such an Order when the other party had reported the dispute to him, provided certain conditions were fulfilled; (2) awards of the Industrial Disputes Tribunal became an implied term of contract enforceable in the courts, (3) individual employers outside the employers' organizations could be compelled by the "issues" machinery to observe recognized terms and conditions of employment.

Both the 1940 and the 1951 Orders were based on Defence Regulation 58 A. At the beginning of 1957 the Government, in the course of its policy of gradually ending all the remaining Defence Regulations, initiated discussions with both sides of industry as to what permanent legislation, if any, should replace the Industrial Disputes Order once the basic Defence Regulation was brought to an end.

During these discussions the T.U.C. expressed the view that the Order should remain, or alternatively that its provisions should be embodied in an Act. The employers' representatives, who had always regarded the Order as one-sided in its effects, suggested that the machinery of the Order should continue to be available but should be applied only in those industries in which both the employers' organization concerned and the trade unions wished it; they therefore proposed that a single enabling Act should be passed with a number of subsidiary Orders, providing a "halfway house" between a statutory wages council and completely voluntary machinery. The unions, however, refused to accept such "opting in," and maintained that the Industrial Disputes Tribunal should be made a permanent part of the arbitration machinery.

In announcing his decision to abolish the Industrial Disputes Tribunal in due course, Mr. Macleod said that the success of compulsory arbitration in settling industrial disputes had depended largely on the willingness of employers and unions to co-operate in making the system workable during a critical period. In more normal times it would be out of keeping with British industrial institutions to enforce, at the culmination of a process of wage negotiations, a system of settlement into which one party or the other had to be coerced by law. It had become evident that compulsory arbitration in its main features no longer carried the assent of the majority of employers. Mr. Macleod recalled in this connexion that when the Industrial Disputes Order was made, it had been pointed out that it was experimental and that it would be reviewed immediately if at any time either side wished the Order to be discontinued; he stressed, however, that the Ministry of Labour would still encourage voluntary arbitration.

Statements were issued after the meeting by the T.U.C. General Council and the British Employers' Confederation.

T.U.C. Statement. The T.U.C.'s statement expressed "regret" at the Minister's decision, and said that the General Council took "a serious view of this decision to change the law on industrial relations without the full consultation expected." It continued:

"The General Council consider that on such an important matter it would have been appropriate during the last eight months for the Minister himself to have had discussions with both sides of industry before coming to his decision, and to have sought to bridge the gap between the different points of view.

"The preference of trade unions has always been for joint agreement through collective bargaining, and the vast majority of differences between managements and workers about wages are settled in this way. However, there is at times a need for arbitration and the Industrial Disputes Tribunal has provided a method of arbitration which has given wide satisfaction.

"The T.U.C. consider there were only minor differences between the British Employers' Confederation and themselves on the procedure for obliging all employers in an industry to abide by its jointly-agreed conditions of work. But even in this limited sphere the good tradition of changing industrial relations legislation with the maximum agreement of the two sides of industry has been set aside on this occasion."

B.E.C. Statement. The employers' statement expressed the belief that "arbitration in industrial disputes is useless unless both parties agree to be bound by the results . . ." It continued. "The Industrial Disputes Order was introduced under a Defence Regulation made in 1940 which provided for compulsory arbitration of industrial disputes as a concomitant to the prohibition of strikes and lock-outs agreed to at that time to avoid interference by stoppages of work with the war effort. Since 1951 the ban on disputes and lock-outs has been withdrawn and the Government has decided that the remaining Defence Regulations will have to go and with them the Industrial Disputes Order"

After referring to the Government's discussions with both sides, and to the employers' proposals for the application of the Industrial Disputes Order in those industries "in which the employers' organizations and the trade unions both asked for it," the statement continued: "The Confederation believes that, if the parties had asked in advance for the application of these arrangements to them and the dispute subsequently arose, they would feel themselves under a moral obligation to honour the findings. These proposals were not acceptable to the T.U.C. . . . It put forward no alternative suggestion except that the arrangements under the Industrial Disputes Order should be continued without modification. In the absence of agreements the Confederation feels that the Minister had no course open to him other than to take the decision which he has announced."

Mr. Macleod laid a statutory instrument before Parliament on Nov. 3 whereby (1) the Industrial Disputes Order would cease to apply to any dispute or issue reported on or after Dec. 10, 1958; and (2) the Order itself would cease to have effect on March 1, 1959. Until Dec. 10, disputes and issues could be reported to the Minister of Labour in accordance with the terms of the Industrial Disputes Order, 1951.

The abolition of compulsory arbitration will affect between 12,000,000 and 13,000,000 workers, mainly in private industry. About 10,000,000 more employees—including those covered by Wages Councils, as well as workers in nationalized industries, civil servants, teachers, policemen, firemen, and others—were not covered by the Industrial Disputes Order, and for them there will therefore be no change.

The system of voluntary arbitration, which will be maintained, includes the possibility of referring disputes to the Industrial Court by mutual agreement. [The decisions of this court are not legally enforceable, though it has been held that when a decision has been accepted or acted upon, it forms the term or condition of the contract of employment.] In addition, the Minister of Labour will retain the power to order committees of investigation or courts of inquiry into disputes which are of national importance or which prove particularly intractable.

The number of awards issued by the Industrial Disputes Tribunal in 1957 was 113, bringing the total of such awards since the Tribunal's formation in 1951 to 1,051. The number of awards issued by the Industrial Court in 1957 was 40, bringing total awards issued by that court since its establishment in 1919 to 2,676.—(Times - Daily Telegraph - Manchester Guardian - Ministry of Labour Gazette) **(Prev. rep. 11643 A.)**

B. RELIGIOUS LIFE. — Lutheran Church. - Women admitted to Priesthood in Sweden.

The Church Assembly of the Lutheran Church in Sweden, consisting of all bishops, clergy representatives, and specially elected laymen, decided on Sept. 27 that women might be ordained as priests from Jan. 1, 1959. This reform, sanctioned by special legislation passed by the Riksdag earlier in 1958, had been the subject of one of the most controversial debates in recent years. In the autumn of 1957 the Church Assembly had rejected the proposal by 62 votes to 36, an overwhelming majority of clergy maintaining that it would be contrary to Christian doctrine to allow women to take holy orders; other Church leaders, however, as well as public opinion in general, were in favour of the change, and the Church Assembly's consent to the admission of women to holy orders was eventually given by 69 votes to 29. (Svenska Dagbladet, Stockholm)

A. FAR EAST. — The Quemoy Crisis.

The crisis arising from the bombardment of Quemoy by the Chinese Communist forces, which had aroused grave international concern during the second half of September, greatly relaxed after Mr. Dulles declared on Sept. 30 that the U.S. Government would favour the evacuation of the offshore islands by the Nationalist forces if a "reasonably dependable" cease-fire were arranged. The Peking Government subsequently suspended the bombardment on Oct. 6, and although it was renewed on Oct. 20 it did not reach its former intensity. The development of the crisis since the middle of September is described below under cross-headings.

The Blockade of Quemoy.

Nationalist convoys succeeded in running the Communist blockade of Quemoy daily from Sept. 15-22, and again from Sept. 26-28. After the latter date they were halted by rough weather, but Nationalist aircraft continued to drop supplies by day and night, the amount dropped on Oct. 3 alone being estimated at 250 tons. The supplies received, however, were less than one-sixth of Quemoy's normal requirements according to some estimates, and over half the food dropped by parachute was reported to be lost because of faulty packing. The position was even more serious on the small islands of Little Quemoy, Tatan, and Ertan; it was reported on Sept. 27 that no supplies had reached Little Quemoy by sea for five weeks, that only supplies for the garrison had arrived by air, and that the civilian population, who were prevented by the bombardment from tilling their fields or fishing, were in danger of running out of food supples within a very short time.

The Nationalist Defence Ministry claimed on Sept. 18 that *Sabre* jet fighters escorting a convoy, although greatly outnumbered, had shot down five Communist Mig-17's and sunk three torpedo-boats; on Sept. 21 that Nationalist Navy patrols had sunk a Communist gunboat off Matsu; and on Sept. 24 that 10 Communist aircraft had been shot down in an action between 32 *Sabres* and over 100 Mig-17's. Communist sources, on the other hand, claimed that a Nationalist plane had been shot down on Sept. 18, and another on Sept. 24 during fighting over the mainland in which a Communist plane had also been lost. A Nationalist *Dakota* was destroyed by Communist artillery on Sept. 29 while dropping supplies on Quemoy, and another was shot down by Mig's on Oct. 3.

The successes claimed by the Nationalists in the actions on Sept. 18 and 24 were attributed by U.S. spokesmen to their use of the *Sidewinder* air-to-air guided missile. The *Sidewinder*, which is operated on the infra-red principle, is attached to an aircraft's fuselage forward of the wing, and emits a continuous buzzing when it comes within three miles of an enemy jet plane's exhaust; on being released it is attracted to the exhaust at 1,300 m.p h. and explodes inside it.

Build-up of U.S. Forces in Western Pacific.

By the middle of September the U.S. Navy and Air Force had assembled in the Western Pacific what the *New York Times* described as "the most powerful air-naval fighting force in history." The U.S. air forces in the Far East included, in addition to the jet aircraft of the Navy and other Air Force units, (1) a squadron of F-104 *Starfighter* interceptors in Formosa; (2) a squadron of F-100-D fighter-bombers in Formosa and another in Okinawa; (3) a squadron of F-101 *Voodoo* fighters in Okinawa; (4) a squadron of RF-101 reconnaissance planes in Okinawa and the Philippines; (5) a squadron of B-57 light jet bombers in Okinawa; (6) two squadrons of *Hercules* turbo-prop transports in the Philippines and Japan; (7) a squadron of tanker planes in the Philippines.

Military Talks in Formosa.

A conference took place in Taipeh (the capital of Formosa) on Sept. 22-23 between President Chiang Kai-shek and U.S. military representatives headed by Admiral Felt, C.-in-C. of the U.S. forces in the Pacific. Others taking part included General Chen Cheng (the Nationalist Premier), Mr. Drumwright (the U.S. Ambassador to Formosa), General Kuter (C.-in-C. of U.S. air forces in the Pacific), Vice-Admiral Smoot (U.S. Commander in the Formosa area), and Vice-Admiral Beakley, Commander of the U.S. Seventh Fleet. According to Nationalist sources, President Chiang Kai-shek had argued strongly in favour of military action against the Chinese mainland during these discussions, but no official statement was issued.

A Nationalist spokesman stated on Sept. 24 that his Government favoured immediate aerial bombardment of the Communist batteries and an eventual landing on the mainland, and on Sept. 29 President Chiang Kai-shek declared at a press conference: "There is need for retaliation. The time is now. We have withheld so far out of a spirit of co-operation with the U.S.A. . . . When the crucial time comes there are no restrictions on our taking the right of self-defence and bombing mainland bases." A U.S. Defence Department spokesman pointed out on Sept. 25, however, that an agreement existed that the Nationalist forces would not attack the mainland without U.S. approval; he added: "Even though you might construe bombing positions which are attacking you as defensive, other people might not. The Chinese Communists stand branded as aggressors. We do not want to give them any opportunity to shift the label on to us through steps which might be interpreted by some as provocative actions." [The agreement referred to was the exchange of Notes appended to the Mutual Security Treaty concluded in 1954 between the United States and the Chinese Nationalist Government—see 14007 C.]

U.S. official spokesmen stated on Sept. 18 that military supplies to the value of $90,000,000 had been sent to Formosa since the crisis, or more than half as much again as the total amount of military aid planned for the fiscal year ending June 30, 1959; the figure was expected to exceed $300,000,000 before that date.

M. Khruschev's Second Letter to President Eisenhower. - Rejection by U.S. Government.

The Soviet Premier, M. Khruschev, replied on Sept. 19 to President Eisenhower's letter of Sept. 12 in a long and strongly worded Note in which he contended that U.S. support of the Nationalist Government was responsible for the crisis, and that there could be no lasting peace in the Far East until the U.S. armed forces were recalled from Formosa and the Formosa Straits.

M. Khruschev wrote: "On receiving your letter of Sept. 12 and studying it, I was sorry to note that . . . you have failed to appreciate the essential meaning of my message to you. My message was meant to show the full extent of the danger that will face mankind unless the U.S.A. abandons its aggressive policy, which is creating centres of grave conflict now in one area of the world, now in another, and has brought about the present tense situation in the Far East. . . . The only real source of tension in that part of the world consists in the fact that the U.S.A. has seized inalienable Chinese territory -- Taiwan [Formosa] and a number of other islands -and is maintaining under its armed protection the Chiang Kai-shek clique thrown out by the Chinese people, and encouraging its attacks and provocations against People's China. . . .

"I am surprised at your comment that, while sending a message to you, I did not send any communication to—as you put it—China's Communist leaders . . . I addressed my message on the Taiwan events to the President of the U.S.A., and not to the Government of the Chinese People's Republic, for the simple reason that it is not China that is interfering in the internal affairs of the U.S.A., but the U.S.A. which, trampling underfoot all the standards of behaviour of civilized nations, has grossly interfered in China's affairs. . . . To urge us, as you do, to exert some influence on the Government of the Chinese People's Republic in connexion with the Taiwan events means trying to induce the Soviet Union to interfere in the internal affairs of China. The Soviet Union would never be a party to such a shameful affair. . . ."

M. Khruschev continued: "Who can deny that but for U.S. support there would long since have been no Chiang Kai-shek clique or so-called Taiwan problem, and that but for U.S. interference the people of the whole area would have long since been living in peace and security? It is clear to all that the reason why the U.S.A. has illegally seized those islands is that by keeping Chiang Kai-shek's clique in being on Taiwan it is able to maintain its own armed forces in the area and threaten the Chinese People's Republic with war . . . The facts are that the U.S. Government has forcibly seized islands belonging to the Chinese people—islands which are 10,000 kilometres away from the American continent—and that it is bent on keeping them. Moreover, you want China to give up that part of her territory and resign herself to its being in foreign hands and used as a base for aggression against the Chinese People's Republic and other peace-loving countries of Asia. But is it not obvious . . . that such a great world Power as the Chinese People's Republic will never agree to part of its territory being alienated and used as a place for massing foreign armed forces for aggression against it? . . .

"In your letter you state that Taiwan and the off-shore islands have never been under the control of Communist China. This statement seems to be meant to justify the attempt to alienate these islands from the Chinese People's Republic. However, the U.S.A. solemnly recognized China's sovereignty over those islands in the Cairo Declaration of 1943. This was reaffirmed in the Potsdam Declaration of 1945, which was signed by the United States. . . . Have these territories ceased to be Chinese since the victory of the people's revolution in China . . .? Of course they have not. To deny this is to interfere in the internal affairs of other peoples and to arrogate to oneself certain police functions . . . If Britain, for instance, were to build her policy on such a concept she might, if she could, start a war against the U.S.A. for the simple reason that what is now the territory of the United States was once a colony of the British Empire.

"Nor can one fail to note that in opposing Taiwan and the offshore islands to the whole of China, as you do in your letter, an undisguised attempt is being made to create a situation of 'two Chinas.' Such attempts, which are aimed at the dismemberment of China, are resolutely rejected by the people and Government of the Chinese People's Republic. . . . You seem, Mr. President, to be still proceeding

from the assumption that Chiang Kai-shek represents something in China. In reality, however, he is no more than a hated shadow of the past in the eyes of China's 600,000,000 people . . . Also unfounded is the assertion in your letter that the American armed forces are operating in the Taiwan area in pursuance of the U.S.A.'s contractual commitments to a handful of traitors to the Chinese people, with Chiang Kai-shek at the head of these traitors. And this notwithstanding the fact that this handful of people—whom former Secretary of State Acheson described as early as 1949 as corrupt individuals who had forfeited the confidence of the people [see 10203 A]—have long represented no one but themselves Today Chiang Kai-shek has no more reason to act as a representative of China than, say, Kerensky would have to act as a representative of the Soviet people . . .

"As I noted in my previous message, certain American military leaders are even trying to threaten China with atomic weapons. Press reports say that units of the American Air Force equipped with nuclear weapons have been rushed to Taiwan, together with various rockets and guided missiles of the *Nike-Hercules* type, and that missile-launching ramps are being built, and so on. Such actions by the U.S. Government cannot, naturally, reduce tension in the area, improve the general climate, or create the conditions for greater confidence. On the contrary, these actions tend to aggravate the situation and increase the danger of an outbreak of war involving the use of the most devastating modern weapons. I must tell you outright, Mr. President, that atomic blackmail with regard to the Chinese People's Republic will intimidate neither us nor the Chinese People's Republic. Those who harbour plans for an atomic attack on the Chinese People's Republic should not forget that the other side, too, has atomic and hydrogen weapons and the appropriate means to deliver them, and that if the Chinese People's Republic falls victim to such an attack the aggressor will at once suffer a rebuff by the same means.

"I have told you earlier, and feel it necessary to stress once more, that an attack on the Chinese People's Republic is an attack on the Soviet Union. We have a treaty of friendship, alliance and mutual assistance with this great friend, ally and neighbour of our country—a treaty corresponding to the fundamental interests of the Soviet and Chinese peoples; and let no one doubt that we shall fully honour our commitments. . . ."

M. Khruschev went on . "After your election as President of the United States, Soviet statesmen pinned great hopes on you. Remembering the excellent co-operation between the Soviet Union and the U.S.A. when you were Commander-in-Chief of the armed forces of the U.S.A., Britain, and France in the war against Hitler Germany, we hoped that this co-operation would also be possible after the war. . . . However, the policy you are now pursuing as President has largely undermined these good feelings, and to an increasing extent strengthens our belief that the 'brink of war' policy of Mr. Dulles is in fact inseparable from your name . . .

"The most important thing is to recognize the Government of the Chinese People's Republic. Such a step by the U.S. Government would clarify the international situation at once, and would be welcomed everywhere as a highly valuable contribution to the cause of maintaining peace. This approach to the solution of international problems from the standpoint of peaceful co-operation also makes it imperative to discontinue the tactics of obstruction in the U.N. and to refrain from raising obstacles to the solution of the urgent problem of restoring China's rights in the United Nations. All the U.N. member-States would welcome such a decision, since without the Chinese People's Republic the United Nations cannot be a completely representative international body for maintaining international peace and security in conformity with the U.N. Charter.

"An end must be put once and for all to intervention in China's internal affairs. The U.S. fleet must be recalled from the Taiwan Straits and U.S. troops must leave Taiwan and go home. Without these steps there can be no lasting peace in the Far East. If the U.S.A. does not do that now, People's China will have no other recourse but to expel the hostile armed forces from its own territory, which is being converted into a bridgehead for attacking the Chinese People's Republic. We fully support the Chinese Government and the Chinese people. We have supported and will continue to support their policy. However, if the U.S. Government adopts the course of respecting the sovereign rights of the great Chinese people, and will be guided in its policy towards China by the principles of peaceful co-existence, we do not doubt that this will not only enable the present tension in the Taiwan area to be removed, but will also create the necessary conditions for reliably strengthening peace in the Far East and throughout the world."

The U.S. Government formally rejected M. Khruschev's Note, which was returned to the Soviet Foreign Ministry on Sept. 21 by the U.S. Embassy in Moscow. A White House statement declared that the Note was "replete with false accusations," was couched in "abusive and intemperate" language, "indulged in personalities," contained "inadmissible threats," and was therefore "unacceptable under established diplomatic practice." A second U.S. statement was issued at the same time, as follows :

"The letter from Chairman Khruschev which the President has rejected dealt with the serious situation that has developed in the area of Taiwan since the Chinese Communists began their armed attack on Aug. 23. Mr. Khruschev demanded that the U.S. Fleet and armed forces should at once withdraw from Taiwan and neighbouring waters and 'go home.' He said that unless this were done, the Chinese Communists, with the support of the Soviet Union, would have no choice except the 'expulsion' of U.S. forces.

"It is tragic that Soviet military despotism should support the use of force to achieve expansionist ends. The U.N. Charter requires that the nations shall settle their disputes by 'peaceful means.' The United States stands ready to do that, and indeed is now seeking a peaceful solution through ambassadorial talks at Warsaw. But it is not easy to negotiate under such threats as the Soviet Union makes We deeply deplore the use of such threats.

"The United States considers the Soviet viewpoint to be grotesque and dangerous. Indeed, only in an 'upside down' world could it be argued that it is 'aggression' when the United States co-operates with a friendly Government purely for defence, but that it is 'peace' for the Soviet Union to pledge its support to the Chinese Communist regime in its effort to acquire by armed force territory over which it has never exercised authority."

The Soviet Government had previously accused the Japanese Government (in a Note of Sept. 16) of giving aid to the U.S.A.'s "provocative action" in the Formosa Straits, and had warned it of the consequences of U.S. use of Japanese territory for "acts of aggression" The Japanese reply (Oct. 2), whilst not denying that U.S. bases in Japan were being used to send men and supplies to Formosa, rejected the Soviet contention that the U.S.A. was engaged in aggression, on the ground that the crisis had originated in the use of armed force by Communist China.

International Discussions in New York.

During the second half of September private discussions on the Far Eastern crisis took place in New York between representatives of the great Powers who were attending the 13th session of the U.N. General Assembly. The British Foreign Secretary, Mr. Selwyn Lloyd, had a two-hour talk on Sept. 23 with the Soviet Foreign Minister, M. Gromyko, and on Sept. 25-26 had further long discussions with Mr. Dulles and Mr. Krishna Menon (the Indian Defence Minister). Mr. Dulles also saw the French Foreign Minister, M. Couve de Murville. On leaving for London on Sept. 26, Mr. Lloyd stated that he was "a little more hopeful of a peaceful settlement."

Addressing the General Assembly on Sept. 25, Mr. Lloyd said that Britain supported the U.S.A. in its wish for a peaceful settlement. He added : "We hope most earnestly that there will be a determination to see that the Warsaw talks reach a satisfactory conclusion. The crisis has been immediately precipitated by large-scale bombardment of Quemoy by Chinese Communist forces. We hope that this resort to force will be terminated, and that the Chinese Nationalist authorities will also abstain from military activities. I believe that the whole international community should join in insisting that this matter should not be settled by force."

Statement by British Government and T.U.C.

In Britain, a delegation from the General Council of the T.U.C., headed by its chairman (Mr. Robert Willis), presented to Mr. Macmillan on Sept. 25 a statement which the Council had issued on the previous day, emphasizing that Britain should not allow herself to become involved in a war in defence of Quemoy. At the end of their talk the following statement was issued from Downing-street summarizing the views of H.M. Government and the T.U.C. :

"The [T.U.C.] deputation . . . emphasized the deep concern of trade unionists in regard to the present position and the possibility of a drift into war, and urged most strongly that it should be made clear that the people of Britain could not allow themselves to become involved in what might turn into a much wider conflagration. They appreciated the extreme difficulty of the situation and thought that it was necessary to reiterate that this was not a matter to be settled by force. They urged that every endeavour should be made by negotiations through the U.N. or alternatively through special procedures which have been adopted in the past to secure discussions for a peaceful settlement.

"The Prime Minister said that the Government's policy in this matter was clear—namely, that the whole international community should join in insisting that this dispute should not be settled by force. In his recent letter to Mr. Gaitskell [see page 16391, second column] he had quoted his own statement at Bromley on Sept. 12 : 'Our American allies have neither sought nor received promises of military support from us in the Formosa area. The fact that we are not militarily involved puts all the greater obligation upon us to help in any way we can, by private consultation and public action, to secure a peaceful solution of these problems.'

"The Prime Minister said that the Foreign Secretary had restated the Government's position in the speech which he made in the U.N. General Assembly [see above]. He pointed out that the Foreign Secretary had taken the opportunity while in New York to have private talks with both the U.S. and Soviet representatives. The Prime Minister said the British Government were willing to help in any other way to secure a settlement of the dispute by diplomatic negotiations. Talks are still continuing in Warsaw, and it is not clear that a discussion in any other forum at this stage would contribute towards a solution.

" Finally, the Prime Minister pointed out to the T.U.C. representatives that, in the interests of preserving peace, private consultations and diplomatic negotiations were preferable to public declarations. We should be careful not to play into the hands of the Communists, whose purpose is always to divide the free world. The Prime Minister said that, in the light of future developments, he would be glad to keep in touch with the T.U C. and to see them again if necessary."

Opposition to Government's Policy inside U.S.A.

Although several prominent Democrats, including ex-President Truman, expressed support for the U.S. Government's policy in the Quemoy crisis, most of the leading members of the party adopted a strongly critical attitude towards it.

Senator Humphrey (a member of the Senate Foreign Relations Committee) appealed on Sept. 24 for a negotiated cease-fire and the withdrawal of the Nationalist forces from Quemoy, declaring that " we have been dragged to the brink of war again for no purpose remotely connected with our national security." **Senator Green** (chairman of the Senate Foreign Relations Committee), who had usually supported the Administration's foreign policy in the past, expressed deep concern in a letter to President Eisenhower on Sept. 29 that " the course of events in the Far East may result in military involvement at the wrong time, in the wrong place, and on issues not of vital concern to our own security, and all this without allies, either in fact or in heart " ; he suggested that " U.S. military involvement in the defence of Quemoy would not command that support of the American people essential to successful military action."

Much disquiet at the Government's policy was also widely expressed in influential newspapers. In a leading article on Sept. 25, the *New York Times* advocated the abandonment of Quemoy and Matsu on the ground that " we have neither strong bipartisan support at home nor moral support from our chief allies to defend these positions, and if we tried to do so we would stand alone against a hostile world opinion." The *Washington Post*, commenting that " opinion is as seriously divided as at any time since the eve of the World War," observed on Sept. 28 that President Eisenhower must be " a little tired of being pushed into these war dances on the brink," and that he should start asking " some searching questions about the dead-end policy that has left him and the country in such an untenable situation."

Modification of U.S. Policy on Quemoy.

At a press conference on Sept 30 Mr. Dulles stated that the U.S. Government regarded the concentration of the Chinese Nationalist forces on Quemoy and Matsu as " rather foolish," and would favour their evacuation if a " reasonably dependable " cease-fire were arranged. He also expressed scepticism about the possibility of the Nationalist Government's recovering control of the Chinese mainland, and emphasized the " flexibility " of U.S. policy.

On the Government's attitude towards the offshore islands, Mr. Dulles said : " The U.S.A. did not feel that it was sound to make the major commitment of force to those areas that the Chinese [Nationalist] Government wished to make. In view, however, of the very strong views of the Republic of China, we were acquiescent in that. We did not attempt to veto it. The result is, I might say, one of acquiescence on the part of the U.S.A., not of approval . . . To withdraw as a retreat under fire would not be a wise step to take because of its probable impact upon other peoples and other countries, and upon morale in Formosa itself. . . . If there were a cease-fire in the area which seemed to be reasonably dependable, I think that it would be foolish to keep these large forces on these islands. We thought that it was rather foolish to put them there and, as I say, if there were a cease-fire it would be our judgment, military judgment even, that it would not be wise or prudent to keep them there. . . . We do not have any legal commitments to defend the offshore islands. We do not want to make any such commitment." Any agreement to renounce the use of force, he emphasized, should be wholly reciprocal, as it would be " obviously impractical and quite wrong to ask the Chinese Communists to abandon the use of force if they were being attacked by the Nationalists."

In reply to questions on the possibility of the Nationalists' returning to the mainland, Mr. Dulles said : " I doubt that just by their own steam they are going to get there." He also pointed out that the U.S.A. was " under no commitment of any kind " to help the Nationalists to return. Even if a revolt on the Hungarian model occurred in China, he added, it would " probably be primarily under local auspices and local leadership; and while outside co-operation and assistance might be sought, it would be hypothetical and problematical as to whether or not it would involve the going-back of Chiang as the head of the Government."

Summing up the situation, Mr. Dulles said . " I feel that there is a slight tendency towards a stabilization of the situation, and I feel on the whole that there is less likelihood of the hostilities intensifying and enlarging than I thought was the case a couple of weeks ago . . . Our policy in these respects is flexible and adapted to the situation that we have to meet. If the situation we have to meet changes, our policies change with it."

At a press conference on the following day President Eisenhower denied suggestions that Mr. Dulles's new attitude could be described as " appeasement." He said that " as a soldier " he believed that it was " not a good thing " to have so many troops on Quemoy and Matsu, which " as of themselves, as two pieces of territory, are not greatly vital to Formosa." He admitted that many of America's allies did not agree with the U.S. Government's policy, adding that he found these differences " puzzling " and " a heavy weight on the mind and spirit."

The change in the Government's policy was welcomed by Democratic spokesmen. Senator Green expressed the view that the Administration's " more realistic approach to the problem " might be attributed to the " widespread public concern lest our position in the Far East has been too aggressive," whilst Senator Humphrey suggested that the common sense of the U.S. people had " pulled the Administration back from the Quemoy brink."

In Formosa, on the other hand, President Chiang Kai-shek said on Oct. 1 that he was " incredulous " at the reports of Mr. Dulles's press conference, and added : " Granted that Mr. Dulles made the statement attributed to him, it would be only a unilateral declaration, and my Government would be under no obligation to keep it." A Nationalist Foreign Ministry spokesman declared on Oct. 2 that the strong garrisons on Quemoy and Matsu were " dictated by military necessity," and that consequently no reduction in their strength could be considered. Mr. Dulles said on the same day that, in reply to inquiries from Mr. Drumwright (U.S. Ambassador in Taipeh), he had sent him a telegram " straightening out " misconceptions in Nationalist circles which gave " an exaggerated idea of the shift of position on our part."

The Warsaw Negotiations.

The talks in Warsaw between the U.S. and Chinese Ambassadors, which had been reopened on Sept. 14, were believed to have reached a position of deadlock by the end of the month, although no official statements were issued. Between the fifth and sixth sessions (held on Sept. 30 and Oct. 4 respectively) Mr. Huang Hua, head of the Western European department of the Chinese Foreign Ministry, arrived in Warsaw from Peking to take part in the discussions.

Mr. Huang Hua, who was educated at Harvard, took part in the Korean armistice negotiations at Panmunjom and in the 1954 Geneva Conference on the Far East. The *Times* commented that his arrival suggested that " his purpose is to sound the American delegation about the implications of the new negotiating position apparently assumed by Mr. Dulles," and that " the general assumption is that he has gone to Warsaw with new instructions."

Temporary Suspension of Bombardments.

The Communist Defence Minister, Marshal Peng Teh-huai, announced in a message to the Nationalists on Oct. 6 that he had ordered the bombardment of the offshore islands to be suspended for seven days, and that supplies might be introduced during this period provided there was no U.S. escort. Marshal Peng also proposed that talks should take place between the Communist Government and the Nationalists to bring about a permanent settlement, whilst the issues between China and the U.S.A. should be solved through the Warsaw negotiations.

Marshal Peng's message was addressed to " all compatriots, military and civilian, in Taiwan, Penghu (the Pescadores), Quemoy, and Matsu " and was worded as follows :

" We are all Chinese. Of all choices, peace is the best. The fighting round Quemoy is of a punitive character. For quite a long time your leaders have been far too rampant. They have ordered aircraft to carry out wanton raids on the mainland, dropping leaflets and secret agents, bombing Foochow, harassing Kiangsu and Chekiang, and reaching as far as Yunnan, Kweichow, Szechwan, the Kaugting area and Chinghai. Can this be tolerated ? Hence the firing of a few shells just to call your attention.

" Taiwan, Penghu, Quemoy, and Matsu are Chinese territory . . . and part of China ; they do not constitute another country. There is only one China, not two. . . .

" The military agreement signed between your leaders and the Americans is unilateral ; we do not recognize it. It should be abrogated. The day will certainly come when the Americans will abandon you . . . The clue is already there in the statement made by Dulles on Sept. 30. Placed in such circumstances, do you not feel wary ? . . .

" It is hard for the 130,000 troops and civilians in Quemoy to stand for long the lack of supplies and the pestering hunger and cold. Out of humanitarian considerations, I have ordered the bombardment to be suspended for seven days starting from Oct. 6. Within this period you will be free to ship in supplies on condition that there is no American escort.

" The war between you and us has been going on for 30 years . . . We propose that talks be held to effect a peaceful settlement. You were notified of this by Premier Chou En-lai several years ago. This is an internal Chinese matter between you and us, not a matter between China and the United States. The issue between China and the United States is the U.S. invasion and occupation of Taiwan, Penghu, and the Taiwan Straits. This should be settled through the negotiations now being held in Warsaw.

"The Americans are bound to go; they have to go. For the United States, the quicker they go the better, because in this way they can keep the initiative. Otherwise they will be always on the defensive. Why should a country in the Eastern Pacific have come to the Western Pacific? The Western Pacific belongs to the people in this region, just as the Eastern Pacific belongs to the people over there. This is common sense.... There is no war between the People's Republic of China and the United States, and so the question of a cease-fire does not arise.

"Friends in Taiwan, there are flames of war between us. They should be stopped and extinguished. To achieve this, talks are needed. Of course, it would not matter so much even if the fighting should continue for another 30 years. But it is better to secure an early peaceful settlement. The choice is up to you."

A Nationalist Government spokesman denounced the Communist statement as part of a "diabolical peace offensive," but stated that the Nationalist forces would fire only in self-defence. Mr. Herter (acting Secretary of State during Mr. Dulles's absence on holiday) welcomed the suspension of the bombardment as an apparent "move in the direction of a cease-fire," and expressed the hope that it foreshadowed "a permanent cessation of their armed attack." The State Department announced on Oct. 8 that U.S. warships had stopped escorting Nationalist convoys, but would resume escort activity if the bombardment began again.

An engagement between Communist and Nationalist aircraft, of which the two sides gave widely differing versions, occurred on Oct. 10; the Communist Government claimed that three *Sabres* had been shot down over Fukien province, whilst the Nationalists claimed that five Mig-17's had been destroyed near Matsu for the loss of one *Sabre*. Following consultations between the Nationalist and U.S. Governments, the Nationalist Defence Ministry announced on Oct. 16 that it had stopped reconnaissance flights over the Chinese mainland but would continue such flights along the coast.

On the expiry of the seven days' suspension of the bombardment, the Communist Defence Ministry issued on Oct. 13 an order extending it for a further two weeks.

The order explained that the shelling had been suspended "so as to see what the opposite side is going to do and to enable our compatriots on Quemoy, both military and civilian, to get sufficient supplies, including food and military equipment, to strengthen their entrenchment . . ." It added: "Among the Chinese in Taiwan, Penghu, Quemoy, and Matsu, the majority are patriots and only a few are traitors. Therefore political work must be done to enable the great majority of the Chinese over there to wake up gradually and to isolate the handful of traitors . . . So long as the Kuomintang in Taiwan has not yet entered into peaceful negotiations with us and a reasonable solution has not been worked out, the civil war continues." The order concluded by saying that if the Americans resumed escort operations in the Quemoy area, shelling would be resumed immediately.

At a press conference on Oct. 14 Mr. Dulles said that the continued suspension of the bombardment was not the "dependable cease-fire" to which he had referred on Sept. 30; he also said that the U.S. Government had "no plans whatsoever" for urging President Chiang Kai-shek to reduce the strength of his forces on Quemoy.

After stating that the U.S. Government had no policy on the reduction of the offshore islands' garrison, Mr. Dulles continued: "It is primarily a matter for the Republic of China to decide. I have made no secret of the fact that over the past the U.S.A. has been inclined to feel that the troops there were excessive for the needs of the situation, and that view we still hold. But the Republic of China holds its views and, after all, it is its territory that is primarily involved . . . The question is whether, given the number of forces that are there, it is more effective to have them in their present numbers on Quemoy and Matsu or to have a greater number on Formosa, which would give greater flexibility and greater range of action under certain contingencies . . . It is a military problem of the disposition of forces . . . We are not in favour of turning over these islands to the Chinese Communists. After all, there are 45,000 civilians on Quemoy alone who would have to be turned over and who don't want to be turned over. We are not in the business of giving away people . . ."

Mr. McElroy, the U.S. Secretary of Defence, visited Formosa on Oct. 12-14 for discussions with President Chiang Kai-shek. He denied reports that the object of his visit was to persuade the Nationalists to agree to a reduction of their garrisons, and stated that the U.S. forces in the area might remain there for some time, whether the cease-fire were extended or not. He also said that U.S. warships might resume escorting convoys if it were "militarily necessary."

Resumption of Quemoy Bombardments.

On Oct. 20 Marshal Peng Teh-huai suddenly issued an order cancelling the cease-fire, on the ground that U.S. escort vessels had allegedly entered Chinese territorial waters. Shelling was accordingly resumed on the same day. Marshal Peng's statement was worded as follows:

"The order for our Army to suspend the shelling of Quemoy is hereby declared invalid, since the Taiwan authorities have introduced American military escorts to the sea area of Quemoy from the night of Oct. 19 to the morning of the following day. Our Army has twice suspended the bombardment, yet the Taiwan authorities have persisted in their obstinate attitude, refused to hold peace talks, stepped up war preparations, and loudly clamoured for a come-back on the mainland. And now on the eve of the arrival in Taiwan of Dulles, whom they have invited to plan the further implementation of the U.S.-Chiang 'treaty,' they introduced U.S. naval vessels to provide an escort for as long as five hours. This is an open violation of the condition for our temporary suspension of shelling . . . Shelling must therefore be resumed as a measure of punishment . . ."

On the same day the Foreign Ministry in Peking issued a protest (its 57th) against the alleged intrusion by U.S. warships into Chinese territorial waters, stating that a U.S. landing-ship dock and three destroyers had intruded into the Quemoy area. The U.S. Formosa Defence Command categorically denied that American warships had escorted Nationalist supply ships to Quemoy or had entered Chinese territorial waters at any time, though it agreed that a landing-ship dock was off Quemoy.

Two main factors were believed to have influenced the Peking Government's decision to resume the bombardment: (1) The attitude adopted by Mr. Dulles at his press conference on Oct. 14, which was regarded as an indication that he was less prepared to make concessions than he had been on Sept. 30, and which was interpreted by the Peking *People's Daily* as proving that the U.S. demand for a cease-fire was "merely designed to secure an opportunity for military deployment under the cover of political bargaining." (2) A Formosa announcement (Oct. 17) that the U.S.A. would supply the Nationalists with *Nike-Hercules* missiles and train Nationalist troops in their use.

In a further declaration issued on Oct. 25, and addressed to the population of Formosa and the offshore islands, Marshal Peng Teh-huai announced that he had ordered his artillery not to shell Quemoy airfield and the wharf, beach, and ships on even dates, "so that compatriots, both military and civilian, on the islands of Quemoy, Little Quemoy, Tatan, Ertan, and others may all get sufficient supplies, including food, fuel, and military equipment, to facilitate your entrenchment for a long time to come." Marshal Peng added: "If there is a lack of anything, just say so and we will give it to you. It is time now to turn from foe into friend . . . Our refraining from shelling the airfield, the wharf, the beach, and the ships is still conditional on not introducing American escorts."

During the following week shelling was light and sporadic, and on Nov. 2 ceased entirely; as promised by Marshal Peng, shells were fired on odd dates only and not on even ones. On Nov. 3, however, over 36,000 shells were fired at the Quemoy islands after Peking Radio had broadcast a warning to the population to remain under cover.

Mr. Dulles's Visit to Formosa. - Discussions with President Chiang Kai-shek. - Joint Communiqué.

Mr. Dulles flew to Formosa for talks with President Chiang Kai-shek at Taipeh on Oct. 21-23.

A joint communiqué issued at the conclusion of the talks stated that "the two Governments reaffirmed their solidarity in face of the new Chinese Communist aggression now manifesting itself in the bombardment of the Quemoys. This aggression and the accompanying Chinese Communist propaganda have not divided them, as the Communists had hoped. On the contrary, it has drawn them closer together."

The communiqué also stated (*a*) that "under present conditions the defence of the Quemoys and Matsu is closely related to the defence of Taiwan and Penghu"; (*b*) that, because of the resumption of the bombardment, Mr. Dulles and President Chiang had dealt largely with the military aspects of the situation and had not been able, as they had hoped, to give primary consideration to "measures which would have contributed to stabilizing an actual situation of non-militancy"; (*c*) that the U.S. Government had reaffirmed that it considered the Nationalist Government as the "authentic spokesman for free China"; and (*d*) that the Nationalist Government had stated that its "sacred mission" of restoring freedom to the mainland Chinese should be carried out, not by force, but by giving effect to Dr. Sun Yat-sen's three principles of nationalism, democracy, and social well-being.

Commenting on a reported statement by General Chen Cheng that the Nationalists might attack the mainland if the Communists attacked the offshore islands, a State Department spokesman said on Oct. 31 that such statements were not inconsistent with the Nationalist Government's assurances that "the principal means of carrying out that Government's mission of restoring freedom to its citizens on the mainland will be peaceful." He added: This, of course, does not preclude the use of force for self-defence or in case of a large-scale uprising on the mainland. We understand it to mean that the Republic of China will not itself initiate war to re-establish its authority on the mainland."—(New York Times - New York Herald Tribune - Times - Daily Telegraph - Manchester Guardian) **(16387 A.)**

A. BURMA. — Resignation of U Nu. - Government formed by General Ne Win. - Withdrawal of Amnesty Offer to Rebels.

The Burmese Premier, U Nu, announced in a broadcast on Sept. 26 that a recent tour of Upper Burma had convinced him that it would be impossible to hold free and fair elections in November, as the Government had intended, and that he had therefore invited General Ne Win (the Chief of Staff of the Burmese Army) to form a Government which would make arrangements for holding free elections before April 30, 1959. In a letter to the General published on the same day, U Nu said that he would advise President Win Maung to summon Parliament on Oct. 28, when he would resign the Premiership and recommend General Ne Win as his successor. He asked the General to form an interim Cabinet containing no political personalities, to ensure that no members of the armed forces dabbled in party politics, and to put down firmly the political persecution and serious crimes for which members of the Army had been responsible in some districts. In his reply, General Ne Win agreed to form a non-political government and undertook to restore internal peace without permitting the Army to resort to violence ; he also pledged himself to maintain Burma's neutral foreign policy.

The exact course of events leading up to U Nu's announcement remained obscure, although some details were given in a statement by U Nu on Oct. 26. Relations between the Army and the pro-Government section of the Anti-Fascist People's Freedom League (AFPFL) had become strained during the summer, largely because the Army leaders resented the Government's conciliatory attitude towards the Communist and other rebels. Army spokesmen strongly opposed an offer by the Communist rebels to surrender if their armed forces were integrated into the Army, and alleged that the People's Comrade Party (formerly the People's Volunteer Organization), which surrendered in August, had handed over only 700 of the 3,000 weapons in its possession. Although General Ne Win himself took no part in politics, some of his immediate subordinates were known to sympathize with the Opposition section of the AFPFL led by U Ba Swe and U Kyaw Nyein, which feared that if elections were held in November U Nu would be returned to office at the head of a Government dependent on extreme left-wing support.

The tension between the pro-Government section of the AFPFL and the Army became intensified during the first three weeks of September. At a conference of Government supporters held at the beginning of the month, several members of Parliament openly accused the Army of interfering in politics in certain districts in support of the Opposition AFPFL, to which the Army commanders in those districts retaliated by launching a propaganda campaign against the Government.

According to U Nu's statement of Oct. 26, the Home Minister (Bo Min Gaung) had announced at a Cabinet meeting on Sept. 22 that a military *coup* was being planned for the same night. Although General Ne Win denied all knowledge of the alleged conspiracy, Colonel Maung Maung (the director of the military academy) informed the Prime Minister that Army units had been alerted on receiving information that members of the People's Comrade Party had plotted to take up arms again, occupy key positions, murder U Nu, General Ne Win, and other Army leaders, and disband the Army. On Sept. 23 a staff officer, Colonel Aung Gyi, reported on his return from a tour of inspection that Army units had become alarmed at rumours that the AFPFL had been " converted to Communism," and that, despite their leaders' efforts to control them, there was a possibility of outbursts at any moment.

Coinciding with these developments, Army units took security precautions in Mandalay, Insein (nine miles north of Rangoon), and other leading towns, culminating in the occupation of key points in Rangoon during the night of Sept. 25-26. In the capital troops searched all vehicles for arms, while strong guards were posted at police supply depots, the Insein headquarters of the Criminal Investigation Department, the headquarters of the pro-Government section of the AFPFL, and Mingaladon airport.

The Cabinet decided on Sept. 25 to offer the Premiership to General Ne Win, after obtaining the approval of U Ba Swe and U Kyaw Nyein for this decision. In an Order of the Day issued on Sept. 27 General Ne Win stated that he had accepted U Nu's invitation because of the " serious unrest " in the country ; he emphasized that power had been given to him in his personal capacity and not to the Army, that his Cabinet would be civilian and not military, and that it would be based on parliamentary approval ; at the same time he called on his troops to maintain strict discipline and stay out of politics

U Nu formally tendered his resignation when the Chamber of Deputies met on Oct. 28, and nominated General Ne Win with the support of the Opposition section of the AFPFL. The left-wing National United Front, which had supported U Nu since the split in the AFPFL, protested against the nomination of General Ne Win but refrained from putting forward a rival candidate. The new Cabinet was sworn in on Oct. 29, its membership being as follows :

General Ne Win	Prime Minister and Defence.
U Thein Maung	Deputy Premier, Foreign Affairs, Religious Affairs, Health, and Social Services.
U Khin Maung Hpyu	Home Affairs, Information, Local Administration, Immigration, and National Registration.
U Chan Htun Aung	Justice.
U Kyaw Nyein	Finance and Revenue.
U Ba Kyar	Trade Development, Co-operatives, and Supplies.
U San Nyunt	Transport and Communications, Public Works, and Housing.
U Kar	Education, Agriculture and Forests, and Land Nationalization.
U Chit Thaung	Industry, Mines, and Labour.
Sao Wunna	Minister for Kayah State.

No Ministers were appointed for the Karen, Kachin, and Shan States and the Chin Special Division, as the respective State Councils had not yet made their nominations.

U Thein Maung is a former Chief Justice ; U Khin Maung Hpyu a senior civil servant, U Chan Htun Aung is Chief Justice of the High Court ; U Kyaw Nyein (not to be confused with the Opposition AFPFL leader of the same name) is chairman of the Union Bank ; U Ba Kyar is a former judge ; U San Nyunt is a former Elections Commissioner ; U Kar is a mathematics lecturer at Rangoon University ; and U Chit Thaung is a Government chemical examiner. General Ne Win (48) is the youngest member of the Cabinet.

In a policy statement to the Chamber on Oct. 31, General Ne Win said that the restoration of internal peace was not a question of parleying with the rebels or granting them an amnesty, which he described as " just wishful thinking," but of reasserting the Government's authority. The split in the AFPFL, which had caused a failure of the administrative machinery as the insurrection had done in 1948-49, had halted the Communists' intention to " come into the light " ; the People's Comrade Party had " come into the legal fold " to create disturbances, and the Karen National Defence Organization had shifted its headquarters in the Irrawaddy delta to the Insein area. General Ne Win said that his Government would take " drastic steps " to deal not only with the rebel forces but also with black marketeers, profiteers, and " economic insurgents " who had contributed to Burma's instability.

U Nu had previously announced on Oct. 14 that he had recommended the President to withdraw the amnesty offered to the insurgents from Oct. 31, as no further surrenders could be expected, and as he wished to free General Ne Win's hands in dealing with the problem. According to Government sources, a total of 4,373 insurgents surrendered between July 26 and Oct. 11 ; they included nearly 2,000 members of the People's Comrade Party, 1,260 of the Mon United Front, about 600 " White Flag " Communists, and about 200 of the Arakanese Communists who had defected from the " White Flag " faction, in addition to smaller numbers of Karens, " Red Flag " Communists, and other groups. - (Times - Daily Telegraph - Manchester Guardian - New York Times) **(16393 A.)**

B. UNITED KINGDOM. — B.B.C. - New Controller of Third Programme.

Mr. Percy Howard Newby, the novelist and critic, was appointed Controller of the B.B.C. Third Programme on Nov. 3 in succession to Mr. John Morris, who is retiring at the end of the month after holding the post for six years. Mr. Newby was a lecturer in English at Cairo University from 1942-46, and joined the B.B.C. as a talks producer in 1949. (Times) **(Prev. rep. B.B.C., 15912 A.)**

C. AVIATION. — K.L.M. Transpolar Service.

A weekly service from Amsterdam to Tokio over the North Pole was inaugurated by Royal Dutch Airlines (K.L.M.) on Nov. 3, when over 50 passengers were carried on the inaugural flight. From Tokio the service continues to Biak, in Dutch New Guinea, where it will link up with an existing weekly K.L.M. flight from Biak to Amsterdam via India and the Middle East. (Netherlands News Agency) **(Prev. rep. 16127 A ; 15794 A.)**

D. SPAIN - UNITED STATES. — Student Exchanges.

An agreement was signed in Madrid on Oct. 16 under the U.S. " Fulbright Act " whereby 60 scholarships a year will be provided for Spanish students for graduate study and research in the United States, while 40 scholarships a year will be available to American students for study in Spain. (New York Times) **(Prev. rep. 16424 D.)**

A. RUMANIA. — Increased Penalties for Political Offences and Corruption. - Political Trials. - Purge of Rumanian Workers' Party. - Measures against Foreign Residents. - British Protest to Rumania.

The Rumanian Government issued during 1957-58 a series of decrees sharply increasing the severity of the penalties for offences against the security of the State and corruption or embezzlement in the nationalized industries.

In October 1957 theft of public property "of a particularly grave nature" was made a capital offence, and the total or partial confiscation of the property of persons convicted of endangering the security of the State was made obligatory. [Previously wilful murder had been the only non-political crime punishable with death, and confiscation of property had been obligatory only in cases of treason, insurrection, and espionage.] The extension of the death penalty was approved by the National Assembly only a week after the State Control Committee had announced that disciplinary proceedings had been taken against many high officials of the Ministry of Heavy Industry, the State Planning Office, and the Investments Bank, who had been found guilty of embezzlement and other abuses on a "colossal" scale in connexion with the building of a power station.

On Aug. 8, 1958, the Presidium of the National Assembly issued decrees imposing the death penalty for all offences coming under the headings of high treason, sabotage, illegal possession of arms, and counter-revolutionary activity; for embezzlement of sums exceeding 100,000 lei (about £3,000); and for repeated embezzlement of smaller sums. A new decree was subsequently issued in October amending the penal code, under which acts "which could cause the Rumanian State to become involved in a declaration of neutrality or in a declaration of war" were made a capital offence. The maximum term of imprisonment for violence and threats against officials was raised from five to 20 years; for distributing publications directly harmful to State security from 10 to 12 years; for distributing other illegal publications from two to seven years; and for spreading false news "of a kind to disturb the peace" from six months to five years. Failure to return from assignments abroad, or to denounce other persons who attempted to flee abroad, were also made punishable offences. The penalties prescribed in the decree were made applicable to crimes committed in Rumania against other Communist States or against the "interests of the workers in any other country."

The following three main reasons were suggested in Western newspapers for the severity of the penalties laid down: (1) The prevalence of embezzlement and corruption inside State enterprises, which was believed to have caused serious damage to the national economy. (2) The need to ensure that the withdrawal of Soviet forces from Rumania did not weaken the régime. (3) The intensification of the campaign against "revisionism" in the Communist countries raised by the controversy between the Soviet Union and Yugoslavia.

Numerous arrests were made during the summer of 1958 on political and economic charges. At the same time a vigorous press campaign was conducted against corruption; many officials were dismissed for embezzlement or inefficiency, including directors of factories and other enterprises and employees of the Ministries of Agriculture, Commerce, Transport, and Communications; and the courts were officially instructed to regard corruption and embezzlement as "counter-revolutionary activity" and to use their powers to impose the death penalty. It was announced in July that a man had been executed for stealing government property.

A number of political trials took place during the summer. In July eight Rumanians of Hungarian origin were sentenced to death at Timisoara (Transylvania) after a secret trial, and 44 others to terms of imprisonment ranging from five years to life, for "separatist plotting" at the time of the Hungarian revolt. [Transylvania, which borders on Hungary and Yugoslavia, had been the main centre of "revisionism" in Rumania; at Cluj, the capital of the province, university students demonstrated in 1956 against the Soviet intervention in Hungary, and as late as August 1958 *Scanteia*, the official organ of the Rumanian Workers' Party, found it necessary to attack the Cluj newspaper *Faklia* for contending that "dogmatism" and "sectarianism" represented a greater danger than "revisionism."] Two leading members of the former Liberal Party, M. Bentoiu (a former Minister of Justice, who had been released earlier in the year after 10 years in an internment camp) and M. Aznavorian (a prominent Bucharest lawyer) were reported to have been tried in August with 13 other defendants for crimes against the State, and to have received sentences of 25 years' imprisonment.

At a five-day session held in June, the Central Committee of the Rumanian Workers' Party expelled two of its members (M. Constantin Doncea and M. Jacob Kocovianu) from the party for "anti-party activities," removed two others (M. Vasile Kristake and Mme. Iliana Raceanu) from the committee, and reprimanded several more of its members. Orders were issued for the enforcement of "iron discipline" inside the party against "destructive and anarchist elements," and regional party secretaries were urged to increase resistance to "alien ideological demonstrations."

The purge thus inaugurated was extended to cover all aspects of the national life. Officers and n.c.o.'s were dismissed from the Army as "reactionaries"; "comradely courts" were set up in State enterprises with powers to punish employees with fines or dismissal for breaches of discipline at work, causing damage to public property, or "violating the individual integrity of other workers"; whilst professional workers and those engaged in the arts and sciences were subjected to particularly heavy pressure—scientists and philosophers being censured for falling under the influence of "idealistic trends," artists for "Western liberalism," and theatre managers for including "worthless" Western plays in the repertory. Three leading actors were expelled from the Rumanian Workers' Party and declared "enemies of the working class." Even the field of sport was affected by the purge, about 50 well-known players, trainers and referees being expelled from the Rumanian Football Association for alleged corruption and idleness or on ideological grounds.

Hundreds of foreign nationals resident in Rumania were ordered by the police during the summer either to become Rumanian citizens or to leave the country at short notice. The majority of those involved were Greeks and Italians, although smaller numbers of Turks, Swiss, Austrians, Frenchmen, and others were also affected. The British Legation in Bucharest protested on Sept. 11 against the treatment of two elderly widows who had renounced their British nationality under such circumstances; one was aged 91 and was unable to leave her room, whilst the other was an invalid.

In reply the Rumanian Foreign Ministry stated that it was not their intention to force foreign residents to take Rumanian nationality or to leave the country, and that the police had simply been verifying the status of certain foreigners. On Sept. 20 the British Minister presented a formal Note of protest asking that the action taken against the two ladies should be annulled, and that written assurances should be given that they were not regarded as having relinquished their British nationality. This protest was rejected by the Vice-Minister for Foreign Affairs, M. Lazareanu, who repeated the assurance given on Sept 11. A subsequent British Foreign Office statement said that as this assurance "appeared to be at variance with the facts," the British Minister had renewed his protest.

Similar protests were lodged by the French and Greek Governments.—(Agerpres, Bucharest - Times - Le Monde, Paris)

B. AUSTRALIA. — Uranium Production. - Opening of Mary Kathleen Mine and Township.

Australia's biggest uranium project, the Mary Kathleen uranium mine in north-west Queensland, was officially opened on Oct. 27 by the Federal Prime Minister, Mr. Menzies, in the presence of Lord Carrington, the U.K. High Commissioner, and Mr. Nicklin, the Premier of Queensland.

The uranium deposits were discovered by a group of private prospectors in July 1954 in a barren area 40 miles equidistant from Cloncurry to the west and Mount Isa to the east. In 1955 the Rio Tinto Company of London undertook to raise the necessary capital and to be responsible for the management of the project, whilst in March 1956 an agreement was concluded for the supply to the U.K. Atomic Energy Authority of the first 4,500 tons of uranium oxide to be produced, at a cost of £A40,000,000 (£32,000,000 sterling). Within 27 months a dam was built across the nearby Corella River to provide an all-the-year-round water supply; opencast mining was begun; a uranium treatment plant was built and 250,000 tons of uranium ore stockpiled; and a new model township was built. The township, known as Mary Kathleen, has some 1,200 inhabitants; it possesses a hospital, churches, school, community centre, and recreational facilities.

Ore treatment in the uranium mill began on June 3, 1958; the first uranium oxide was produced on June 19; and on the day of the official opening (Oct. 27) the first shipment of uranium concentrate was loaded in Brisbane for transport to Britain, nearly six months ahead of schedule.

A total amount of £A12,500,000 (£10,000,000 sterling) was spent on the construction of the mine and township by Mary Kathleen Uranium Ltd., the company working the project. Of the share capital of Mary Kathleen Uranium Ltd., 51 per cent is held by the Rio Tinto Mining Company of Australia Pty. Ltd. (a subsidiary of Rio Tinto); 35 per cent by Australasian Oil Exploration Ltd. (an Australian-owned company); 9 per cent by a syndicate representing the original prospectors; and 5 per cent by associates of Rio Tinto. (Australian News and Information Bureau - Times - Daily Telegraph - Manchester Guardian)

C. UNITED STATES. — Population Increase.

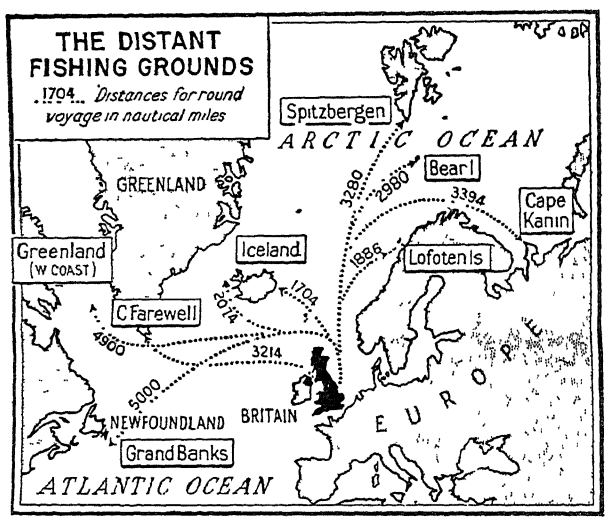
The population of the United States reached 175,000,000 on Oct. 16, when the figure was registered on the Census Bureau's electric chart which records changes in the country's population on a minute-by-minute basis (see 15423 B). It was pointed out that it had taken 17 years for the population to climb from 125,000,000 to 150,000,000, whereas it had taken only 8½ years to climb by another 25,000,000 to 175,000,000.

(New York Times) **(Prev. rep. 15423 B.)**

A. ICELAND. — Fisheries Dispute with Britain and Continental Countries. - British Refusal to recognize Icelandic Claim to 12-mile Territorial Limit. - Naval Support for British Trawlers.

A protracted fisheries dispute between the United Kingdom and Iceland developed during the summer of 1958 after an announcement by the Icelandic Government on May 25 that it had decided to claim a 12-mile belt around the island as "territorial waters" and to forbid British and other foreign trawlers to fish there after Sept. 1. This announcement followed the failure of the Geneva Conference on the Law of the Sea to find an agreed solution for the definition of the width of territorial waters and the contiguous zone (see 16411 A).

The British Government immediately notified Iceland that it did not recognize this "unilateral extension of territorial waters" and could not agree to the proposed exclusion of British trawlers from grounds in which they had habitually fished for very many years. It would therefore regard it as its duty to "prevent any unlawful attempts to interfere with British fishing vessels on the high seas," but was still prepared to discuss with Iceland conservation or other measures intended to protect her legitimate interests. All attempts by Britain and other NATO countries to negotiate a settlement of the dispute having failed, British trawlers continued to fish within the new 12-mile zone after Sept. 1, and were supported by ships of the Fishery Protection Squadron of the Royal Navy.



The map shows the North Atlantic fishing grounds used by the British fishing fleet. Reproduced from *The Economist*: source—British Trawler Owners' Federation.

The course of the dispute is summarized below:

Origins of the Dispute.

The dispute dated from early in 1958, when the Icelandic Minister of Fisheries (Hr. Ludvik Josepsson) was reported as saying that Iceland would extend the width of her territorial sea from the existing four miles to 12, "irrespective of the results of the U.N. Conference on the Law of the Sea." Hr. Josepsson, a Communist, urged that the new limits should be proclaimed immediately, whereas the Social Democratic Ministers favoured delay in introducing them. Eventually, on May 25, a Cabinet crisis was avoided by a compromise solution under which the new limits would be proclaimed by decree on June 30 but would not come into effect until Sept. 1.

Hr. Jonasson, the Icelandic Premier, accordingly announced on June 2 that his Government had approved plans to extend the width of Iceland's territorial waters to 12 miles from Sept. 1. Within this zone foreign trawlers would be forbidden to fish, but Icelandic vessels might trawl therein provided they remained outside the former four-mile limit. The decree—to be promulgated on June 30—would also reserve Iceland's right to alter the base lines from which her fishery limits were measured.

British Reactions to Icelandic Decision.

The British Government informed the Icelandic Government on June 4 that it would "not be able to accept the proposed decree, if issued, as of any effect in law," and would seek to prevent "any unlawful attempt to interfere with British fishing vessels on the high seas." The British declaration was worded as follows:

"H.M. Government have noted with surprise and regret the disregard, both in the Icelandic Prime Minister's broadcast and in the official statement, of the long-established rights of other nations to fish in the high seas around Iceland.

"In an *aide-mémoire* dated May 25, 1958, H.M. Ambassador . . . pointed out to the Icelandic Government that if the proposed decree were issued, it could not and would not in law in any way restrict the rights of other nations on the high seas, nor could it lawfully prohibit fishing by other nations in areas which have long been regarded as part of the high seas.

"H.M. Government accordingly will not be able to accept the proposed decree, if issued, as of any effect in law. Claims to exercise exclusive jurisdiction in relation to fishing in areas outside the normal limits of territorial waters are wholly unwarranted under international law. Further, H.M. Government will not be able to recognize base lines beyond those permitted by international law.

"H.M. Government find it difficult to believe that the Icelandic Government would use force against British fishing vessels in order to secure compliance with a unilateral decree which the parties of the Government coalition propose to issue without regard for international law. At the same time, H.M. Government must point out that it would be their duty to prevent any unlawful attempt to interfere with British fishing vessels on the high seas.

"While one nation or a number of nations cannot by themselves alter international law, it is of course open to nations to enter into bilateral or multilateral agreements waiving or restricting in specified areas some or all of the rights which they now enjoy under the law of the sea. H.M. Government and a number of other friendly Governments have done their utmost to persuade the Icelandic Government to abstain from unilateral action and to enter into discussions with a view to the negotiation of an appropriate fisheries agreement.

"H.M. Government are aware of the importance of fisheries to Iceland. Fisheries are also of great importance to the United Kingdom. H.M. Government adhere to the view that through negotiation it should be possible to conclude an acceptable agreement. For that reason, before the announcement of the Icelandic Government's intention, H.M. Government informed the Icelandic Government that they were prepared to enter into negotiations for this purpose. H.M Government are still prepared to enter into such negotiations in the spirit of good will which they showed during the Geneva Conference on the Law of the Sea. They hope that the Icelandic Government will agree that negotiation is in every respect preferable to unilateral action, and that the period before Sept. 1 should be used to negotiate a lasting solution acceptable to all concerned."

The situation likely to arise out of Iceland's unilateral decision to extend her territorial waters was discussed at a meeting in London on June 5 between representatives of the British Trawler Owners' Federation and Mr. John Hare, the Minister of Agriculture, Fisheries, and Food. A joint statement said that the trawler owners had "noted that their grave concern was fully shared by H.M. Government"; had expressed their "full support" for the "firm stand taken against the Icelandic claims"; and had "taken particular note of the attitude of H.M. Government against any illegal use of force against British vessels on the high seas."

Mr. Hare stated in the House of Commons on June 18 that the effect of the Icelandic decision on the British fishing industry would be "very serious," with "heavy losses in catches and economic dislocation of the distant water fleet." He added that it was estimated that 40-50 per cent of the British catch around Iceland and the Faroes, or about 13 per cent of the total British catch from all waters, was taken from within the proposed 12-mile limit.

Continental Reactions.

The Icelandic decision also aroused strong protests from a number of European continental countries interested in the North Atlantic fisheries.

The **French** Government announced on June 3 that it would not recognize the Icelandic decree; the **Netherlands** expressed "deep regret" at Iceland's decision on the same day; and the **Belgian** Government sent a Note to Iceland on June 5 protesting against her "regrettable decision" and intimating that Belgium would consult with other interested countries with fishing interests on the line to be taken. The **Danish** Premier and Foreign Minister, Hr. H. C. Hansen, announced on June 6 that Denmark had suggested to NATO countries the calling of a regional conference to examine the whole question of fishing rights off Iceland, Greenland, and the Faroe Islands. On the same day the **Norwegian** Minister of Fisheries, Hr. Nils Lysø, stressed in the Storting that the extension of Icelandic territorial waters would "undoubtedly have detrimental consequences for Norwegian fishermen," who would be excluded from waters in which they had traditionally fished; Hr. Lysø later pointed out that the proposal might lead Norwegian fishermen to press for a corresponding extension of Norway's territorial waters to 12 miles. The **German** Federal Government sent a protest Note to Iceland on June 12, and on July 10 the **Swedish** Government also protested to Iceland, describing the proposed extension of territorial waters as "a violation of the law of the high seas" and urging the calling of a multi-national conference to discuss the matter.

The **Soviet** Government newspaper *Izvestia*, on the other hand, expressed the view that Iceland's decision was "perfectly lawful,"

International Conferences of Fishery Interests.

Representatives of the fishing industries of seven Western European countries—Belgium, Britain, Denmark, France, Western Germany, the Netherlands, and Spain—met at The Hague on July 14 at the suggestion of the West German industry. After passing a resolution describing Iceland's proposed action as "a clear offence against international law," the meeting decided to continue fishing in Icelandic waters up to the four-mile limit, as hitherto.

A statement issued on July 21 stressed (1) that "several countries" had fished off the coast of Iceland since the 15th century, and therefore had "much older historic rights than the Icelanders in these waters", (2) that modern trawler-fishing in Icelandic waters was not founded by Iceland but by other countries at the end of the 19th century; (3) that Iceland herself had not begun fishing by steam trawlers in the waters concerned until just before the First World War. Iceland's claim to a 12-mile limit (the statement went on) was therefore "without foundation." Nor could the claim be justified on the grounds of over-fishing, since in that case Iceland would have to forbid her own trawlers to fish inside the limit, just as she had already prohibited all trawlers, including her own, from fishing inside the existing four-mile limit. Nevertheless, the fishing associations of the countries represented were ready to negotiate "amicable agreements" with Iceland on conservation measures.

The Icelandic newspaper *Timinn* (organ of the Social Democratic Party) claimed in a leading article on July 22 that the importance of the Icelandic fisheries to Britain and other countries was "negligible" when compared with their importance to Iceland herself. The annual British catch between 1952 and 1955, it was stated, averaged 10 lb. per person in Britain, and two-thirds of this amount was caught outside the 12-mile limit. Other countries' vessels "fished even less," whereas the Icelandic catch averaged over 2½ tons a year per head of population.

The probable consequences of the Icelandic decision were also considered at a special Scandinavian fishery congress held on Aug. 13-15 at Middelfart, on the Danish island of Funen. Strong protests against the unilateral extension of territorial waters were voiced by the Swedish representatives, but the representatives of Denmark and Norway (which in principle supported a 12-mile territorial limit for Iceland) urged that the question should be settled by international agreement. The Icelandic representative claimed, however, that Iceland had tried unsuccessfully to negotiate on the matter for 10 years, and said that she now felt that she had "waited long enough" and must move to protect her vital interests.

British Trawlers' Decision to fish within 12-mile Limit under Naval Protection. - NATO Discussions.

The British Trawler Owners' Federation stressed on Aug. 15 that their members were "fully determined" to continue fishing within the new 12-mile limit after Aug. 31. It was intended that on Sept. 1 about 100 trawlers should assemble on the 12-mile limit in three "packs," each pack having its own naval protection ship. At dawn the trawlers, which would be unarmed, would cross the 12-mile and fish right up to the former four-mile limit. Skippers would have Government instructions as to what they should do "in the regrettable event of any attempt by Iceland to interfere with their legal and traditional rights in the area."

This announcement was followed on Aug. 16 by a declaration by Hr. Josepsson that any attempt by the Royal Navy to support British fishing vessels in penetrating the 12-mile limit would be considered "an attack on Iceland." He added that Iceland would not bring the territorial waters issue before NATO as it "would not be a NATO matter," but would be willing to participate in "an international conference on the same level as the recent Law of the Sea Conference at Geneva."

[Hr. Josepsson's statement was made in Copenhagen on his way home from Moscow, where he had negotiated with the Soviet Government a £1,000,000 loan to be repaid in fish exports, and had also arranged for a 5,000-ton increase in the U.S.S.R.'s purchases of salt herrings from Iceland in 1958, making 20,000 tons in all. On Aug. 24, the Soviet Foreign Ministry informed Iceland that Russian trawlers had been instructed to "observe strictly" the Icelandic 12-mile limit.]

Meanwhile fishery experts of NATO countries had met in Paris to try to find a solution to the dispute. Although the discussions were private, it was suggested in the Press that M. Spaak (the Secretary-General of NATO) had proposed that instead of extending her territorial waters unconditionally, Iceland should restrict fishing within 12 miles of her coasts. It was officially stated on Aug. 29, however, that the conversations had been unsuccessful. Hr. Jonasson stressed on the same day that Iceland could not accept any compromise solution, and that Icelandic trawlers had been forbidden to fish in the main breeding grounds within the 12-mile limit.

Following a Cabinet meeting on Aug. 27 to consider the situation, a statement was issued from 10, Downing Street on Sept. 1 stressing that whilst the British Government hoped for further negotiations with Iceland about a temporary settlement on fishery limits, it must in the meantime "preserve the rights of British fishing vessels on the high seas." After recalling that the British Government's position had been fully explained in its statement of June 4 (see above), the latest statement continued:

"Since that date H.M. Government and a number of other Governments concerned have made prolonged efforts to secure by negotiation an agreement which would have safeguarded the future of the fisheries around Iceland and taken account of Iceland's dependence on these fisheries, while not prejudicing the consideration on a world-wide basis of the questions of territorial waters and fishery limits at a second U.N. Conference on the Law of the Sea. The holding of such a conference is to be considered at the forthcoming session of the U.N. General Assembly.

"For application during the interim period . . . two alternative arrangements concerning the fisheries around Iceland have been under discussion. The first of these arrangements would have guaranteed to Icelandic fishermen a generous share of the total yield of the fisheries throughout the whole area surrounding the coasts of Iceland, and important areas would have been reserved exclusively for Icelandic small-boat fishermen. After the Icelandic Government had declined to accept an arrangement on these lines, an alternative suggestion was considered.

"Under this alternative, a continuous belt outside the limit claimed by Iceland since 1952 would have been reserved to Icelandic fishermen. For most of its length, the line delimiting the new area of exclusive Icelandic fishing would have amounted to a straightforward extension of Icelandic fishery limits for a further two miles, making a six-mile limit, but in a few areas of importance to Iceland additional concessions would have been made. The agreement, which would have been without prejudice to the views of the parties as to the limits in international law of exclusive jurisdiction in fishery matters, would have run for three years, or for a shorter period if in the meantime a second U.N. Conference on the Law of the Sea had reached agreement on territorial waters and fishery limits.

"The Icelandic Government, however, demanded that the other Governments concerned should recognize the right of the Icelandic Government to extend the fishery limits to 12 miles on the expiry of the agreement, and were not prepared to consent to the inclusion in the agreement of a reservation of rights by the other parties. Because of this, it has not yet been possible to bring the discussion to a successful conclusion.

"H.M. Government would have accepted and would still accept an agreement of either kind. They are prepared to continue negotiations for an agreement or for any *modus vivendi* on an acceptable basis. They hope that negotiations will continue; but in default of an agreement or *modus vivendi*, they must preserve the rights of British fishing vessels on the high seas."

British Trawlers enter 12-mile Zone under Naval Protection. - Repulse of Icelandic Attempts to board British Vessels. - Icelandic Protests to Britain.

British trawlers duly crossed the 12-mile limit at dawn on Sept. 1 and, supported by R.N. Fishery Protection vessels, began fishing in three areas or "boxes" (named respectively "Spearmint," "Butterscotch," and "Toffee-Apple") off the eastern north-western, and northern coasts of Iceland. Notwithstanding the presence of Icelandic fishery-protection gunboats in these "boxes," the day passed without serious incident; Hr. Gudmundur Gudmundsson (the Icelandic Foreign Minister) announced in an evening broadcast, however, that Iceland had informed the U.N. Secretary-General that British warships had "by force protected illegal fishing inside the new fisheries limit," and that a "stern Note of protest" had been delivered to the British Ambassador in Reykjavik.

On Sept. 2 the Icelandic gunboats *Thor* and *Maria Julia* succeeded in placing a boarding party on the Grimsby trawler *Northern Foam* and prepared to take her in prize to Reykjavik. Before the trawler (whose engines had been immobilized by her crew) could be got under way, however, the British frigate *Eastbourne* (2,200 tons) arrived on the scene and placed on board a party which quickly regained control of the *Northern Foam*, the Icelandic boarding party being transferred to H.M.S. *Eastbourne*.

An Icelandic protest against the alleged "forcible removal" of the boarding party from the *Northern Foam* was rejected on Sept. 3 by the British Government, which instructed H.M. Ambassador in Reykjavik (Mr. Andrew Gilchrist) to lodge a counter-protest against Iceland's "illegal interference with British fishing vessels on the high seas." The British Note was rejected by Hr. Gudmundsson, who also refused to entertain suggestions by Mr. Gilchrist concerning the return of the captured men to Iceland; instead, he demanded that the *Eastbourne* should return them to the *Northern Foam* so that they could "carry out their duties on board" that vessel—i.e. seize the trawler for illegal fishing inside the 12-mile limit.

It was stated in the Press that, after the capture of the Icelandic boarding party, the commander of the *Eastbourne* had asked the *Thor* to take them back on board, but the *Thor* had refused to do so. The

men had therefore remained on the *Eastbourne* as "guests." They were eventually put ashore on the Icelandic coast on Sept. 13, whereupon Iceland sent a new protest Note against the "violation of Iceland's territorial waters" by H.M.S. *Eastbourne*.

The removal of the Icelandic boarding party from the *Northern Foam* was followed on Sept. 3-4 by anti-British demonstrations outside the British Embassy in Reykjavik, as well as by a protest meeting called by the Reykjavik Trade Union Federation and attended by over 7,000 people. In a statement earlier on Sept. 4 Hr. Josepsson had claimed that "in spite of the British violation of her territorial waters," Iceland had "already got almost what she wanted," and that 95 per cent of the area inside the 12-mile limit was "free from foreign trawlers"; Icelanders would therefore "continue to be patient," as the British would "have to give up in the end."

Following an Admiralty statement on Sept. 4 that the Icelandic gunboat *Aegir* had tried to ram the British Fishery Protection frigate *Russell*, it was reported on Sept. 6 that Iceland had intensified her "war of nerves" and now had seven gunboats in the "boxes," making trawling there extremely difficult in the foggy conditions prevailing. An Icelandic claim that the trawlers were abandoning fishing inside the 12-mile limit was strongly denied by the Admiralty, which explained that it had been decided to move area "Spearmint" to the north coast of the island; that this decision had been taken solely for fishery reasons and for the convenience of the naval guardships; and that it could in no sense be interpreted as an "Icelandic victory."

A number of unsuccessful attempts were made by Icelandic gunboats (frequently by night) to board British trawlers in subsequent weeks. On Sept. 25, however, the Admiralty announced that the Grimsby trawler *Paynter* had been boarded during the temporary absence of the destroyer *Diana* (the Fishery Protection vessel in the area), which, with special permission from the Icelandic Prime Minister, was proceeding to Patreks Fjordur to land a sick man from the *Paynter*; when the *Diana* returned to the area, the Icelandic boarding party had left the *Paynter*.

The Icelandic Government announced on Sept. 26 that in future British naval vessels would not be allowed to enter Icelandic harbours, even to land sailors or trawlermen needing urgent medical attention. Trawlers with sick men on board would still be allowed to enter any harbour, but would face the possibility of arrest if they were known to have been fishing inside the 12-mile limit. In view of the general stiffening of Iceland's attitude, the Grimsby Trawler Officers' Guild decided on Sept. 28 to ask the Admiralty for more protection for trawlers fishing in Icelandic waters.

Britain protested to Iceland on Oct. 2 against "continued interference" by Icelandic coastguard vessels with "British trawlers lawfully fishing on the high seas." The Note especially complained of (1) "repeated attempts" by Icelandic gunboats to put grapples on British fishing vessels; (2) dangerous navigation by Icelandic vessels by cutting across the bows of British ships; (3) the boarding of the *Paynter* on Sept. 25; (4) the firing by the gunboat *Odinn* on Oct. 1 of warning shots intended to halt the trawler *Afridi*, which—it was claimed—had been outside the 12-mile limit at the time.

The protests were rejected by the Icelandic Government on Oct. 3, and three days later it was reported that an Icelandic gunboat had fired blank shots at the trawler *Kingston Emerald* (which was also outside the 12-mile limit) and had ordered her to stop; the trawler, however, had disregarded the order and had proceeded on her way.

Hr. Gudmundsson announced on Sept. 10 that Iceland would raise the question of fishery limits at the forthcoming session of the U.N. General Assembly, and would ask the General Assembly itself to try to resolve the dispute.—(Times - Daily Telegraph - Manchester Guardian - New York Times - Lloyd's List and Shipping Gazette) **(Prev. rep. Conference on Law of the Sea, 16411 A; Fisheries Dispute, 15251 A.)**

A. POLAND - UNITED STATES. — Reopening of Consulates in Chicago and Poznan.

It was announced in Washington on Oct. 18 that the U.S. and Polish Governments had agreed to reopen consular offices, and that there would be a U.S. Consulate in Poznan and a Polish Consulate in Chicago. The date for the opening had not yet been decided.

It was stated in the U.S. Press that this decision followed the restoration of free travel between the two countries and the growth in their trade relations as a result of U.S. economic aid to Poland; that Chicago had been selected for the Polish Consulate because of its large population of Polish descent; and that Poznan had been chosen for the American Consulate because U.S. firms had exhibited to an increasing extent at the annual trade fairs in that city.

Formerly Poland had consulates in Chicago, New York, Detroit, Pittsburg, and San Francisco, while the U.S.A. had consular offices in Poznan, Cracow, and Gydnia. All these were closed down in 1954, although the U.S. and Polish Governments continued to maintain embassies in each other's capitals.

B. CANADA. — Defence Policy. - Introduction of Guided Missile Air Defence System.

The Canadian Prime Minister, Mr. Diefenbaker, announced on Sept. 23 that the Government had decided on the following important changes in the Canadian air defence system:

(1) The *Bomarc* guided missile would be introduced, and two bases for firing such missiles established in Northern Ontario and Quebec. Negotiations were under way with the U.S.A. to work out arrangements for obtaining *Bomarcs* and the necessary equipment for maintaining, testing, and launching them; discussions would also be held on the best way for Canadian industry to share in the production of the missiles.

Mr. Diefenbaker explained that the *Bomarc* was a long-range anti-aircraft missile guided from the ground with the aid of the same radar system as that used in guiding interceptor aircraft. It could be used with either a conventional or a nuclear warhead. The use of *Bomarcs* would be in accord with the approved policy of NORAD for the air defence of the North American Continent. Most of the industrial areas in Canada would be within the defensive range of the two projected *Bomarc* bases or of others under NORAD control and located in the northern United States; further *Bomarc* bases might be located in Canada in the later development of the programme.

(2) The Pinetree radar control system [see 13896 A] would be extended and strengthened by the construction of several additional large radar stations, and the erection of small supplementary intervening stations between all the larger ones.

(3) The *Sage* electronic control and computing equipment would be installed in the air-defence system to deal more effectively with the increased numbers of aircraft and the *Bomarc* guided missiles. It would be integrated as part of the North American *Sage* system under NORAD, and discussions were being initiated with the U.S. Government to determine the number of large electronic computers needed and to arrange for the participation of Canadian industry in the expansion programme.

(4) In view of the introduction of guided missiles, the number of supersonic interceptor aircraft required for the RCAF Air Defence Command would be substantially less than previously foreseen; the preponderance of expert opinion was that by the 1960s manned aircraft, however outstanding, would be less effective in meeting the threat than had previously been thought. As the Canadian supersonic interceptor aircraft—the CF-105 (*Arrow*)—would not be available for effective use in squadrons until late in 1961, the Government had decided that it would no longer be advisable to put these aircraft into production. On the other hand, the Government believed that it would not be prudent to discontinue abruptly the development of the CF-105 and its engine, in view of the effects upon the aircraft industry. It had therefore decided that the development programme for the *Arrow* and its *Iroquois* engine should be continued until March 1959, when the situation would be reviewed.

(5) In consequence of the above decision, it would be unwise to proceed with the development of the *Astra* special flight and fire control system for the CF-105 and of the special air-to-air missile (the *Sparrow*) envisaged as its armament; accordingly, contracts for the development of the *Astra* and *Sparrow* were being terminated. Meanwhile, modifications would be made in the CF-105 to permit the use of a fire-control system similar to that in U.S. aircraft.

Mr. Diefenbaker stated that the savings achieved by cancelling the *Astra* and *Sparrow* programmes and substituting an alternative fire-control and weapon system would amount to about $330,000,000 for a completed programme of 100 aircraft, thereby reducing the cost per aircraft from approximately $12,500,000 to about $9,000,000. In conclusion he pointed out that it was "evident that in the larger weapon systems now required for air forces, Canadian work in the design, development and production of advanced equipment will have to be closely integrated with the major U.S. programmes." The U.S. Government recognized this and were prepared to work out production-sharing arrangements with Canada.

NOVEMBER 8—15, 1958

A. CYPRUS. — The Internal Situation.

The internal situation in Cyprus during the past five months (mid-June to mid-November) is summarized below on a month-by-month basis, in continuation of 16219 A. Recent political and international developments relating to the Cyprus question are described in 16450 A.

June. - Reinforcement of British Troops. - Sir Hugh Foot's Offer to meet Colonel Grivas.

Following the widespread communal riots between the Greek and Turkish Cypriot communities (see page 16221), the British forces in Cyprus were reinforced in June by the 16th Parachute Brigade and the 1st Guards Brigade, both of which were flown to the island from the United Kingdom. These reinforcements brought the strength of the British forces in Cyprus to 15 infantry battalions, three parachute battalions, one cavalry regiment, one field artillery regiment, and one Royal Marine Commando—the largest concentration of troops in the island since the beginning of the emergency, with the possible exception of the build-up during the Suez crisis.

Although the drastic security measures imposed on June 9 by Sir Hugh Foot (see page 16222, first column) checked further large-scale outbreaks of communal violence, extreme tension persisted throughout the month between the two Cypriot communities; several murders of individual Greeks and Turks occurred in Nicosia, Limassol and Famagusta during the last fortnight of June, the perpetrators escaping in every case. A daylight curfew was imposed in the principal towns on June 15 as a precaution against further mass outbreaks of communal violence, but was lifted on June 30 except in Limassol, where a Turkish Cypriot had been shot dead on the previous day by an unknown gunman.

It was disclosed at Government House on June 24 that Sir Hugh Foot had sent a letter to Colonel Grivas in April last offering to meet the Eoka leader "alone and unarmed" in order to take measures to end the campaign of sabotage and violence. No formal reply was received to this offer, but leaflets signed "Dighenis" (Colonel Grivas's pseudonym) were subsequently distributed in Nicosia in which the Governor's offer was described as a "trap" and a "fraud," and in which Sir Hugh was accused of pursuing a "two-faced" policy of alternately "smiling at and plotting against" the Cypriot people.

July. - Mass Outbreaks of Communal Violence. - Greek and Turkish Terrorism. - Murder of British Soldiers. - The Avgorou Incident. - Drastic Security Measures. - Peace Appeals by Mr. Macmillan, M. Karamanlis and M. Menderes.

The month of July was marked by communal violence on an unprecedented scale, which cost the lives of 97 Greek and Turkish Cypriot civilians—a record figure for any of the 40 months of the Cyprus emergency. The killings, which were of almost daily occurrence, included numerous revolting and bestial murders without regard to age or sex, the death-roll on some days being as high as six, seven or even eight. In addition, two British soldiers were killed by Eoka terrorists during the month—the first British victims since the murder of two servicemen in Famagusta on May 24.

Among the most brutal of the 97 murders in July were the beating to death of three Turkish Cypriot youths at a village near Paphos, and of two Greek Cypriot shepherds at a village near Nicosia (July 8-9); the murder of an 11-year-old Greek Cypriot boy whose mutilated body was found at Athenion, 15 miles from Nicosia (July 10); the killing of a monk and a nun during an attack (apparently by Turkish Cypriots) on a monastery in the hills near Larnaka (July 10); the killing of five Turkish Cypriots and the wounding of many others when a bus was ambushed on the Nicosia-Famagusta road by terrorists (believed to be Eoka gunmen) who had blocked the road by felled tree-trunks (July 12); the murder of three Turkish shepherds found shot dead in open country near Famagusta (July 13); the killing of a 72-year-old Turkish Cypriot in his sleep at a village in eastern Cyprus (July 16); the killing of a Turkish auxiliary constable by a Greek mob at Lassa village, in western Cyprus (July 18); the murder of two shepherds (one Greek and one Turkish) who were found shot through the head in the Larnaka area (July 21); the beating to death in his own bed of a 90-year-old Turkish Cypriot at Paphos (July 28), a crime believed to be the work of Eoka; the shooting of an 83-year-old Greek Cypriot in the centre of Nicosia (July 29); the killing of a Greek Cypriot shepherd who was found with his throat cut near Famagusta (July 29); and the murder of three Turkish Cypriots, all beaten to death, in western Cyprus (July 31).

Apart from these victims, dozens of others were killed by Greek and Turkish gunmen in the towns, villages and the countryside; many were murdered in the streets, others in shops and cafés, and others in their own homes. Numerous civilians were wounded, particularly in the ambush of July 12 (see above) and in another ambush on July 30, when eight Turkish Cypriots—including children and a baby—were injured when Eoka terrorists threw bombs at a bus 40 miles west of Nicosia. Much damage was done to property by outbreaks of arson during communal rioting in Nicosia and elsewhere.

Two British soldiers of the Royal Horse Guards were killed by Eoka terrorists on July 8 while shopping in Hermes-street, in the centre of Nicosia; like previous British victims, they were shot from behind by gunmen who succeeded in escaping despite intensive searches of the area. Eoka leaflets described the murders as "retaliation" for an incident three days earlier at the village of Avgorou (near Famagusta), in which two Greek Cypriots were killed when a mob attacked a small party of British troops.

The Avgorou incident occurred when four armoured cars entered the village on a routine patrol, and also with instructions to look for a certain wanted man believed to be in the area. A large Eoka sign was prominently displayed at the village coffee-shop, and underneath it stood a youth whose manner to the patrol was insulting and insubordinate; on being told to remove the sign, the youth refused to do so, whereupon the patrol commander ordered his arrest so that he could be handed over to the police. As the struggling youth was being arrested, the villagers came to his aid and forcibly rescued him by weight of numbers.

The patrol commander then called off his men (only seven in all), cordoned the house, and called for reinforcements. Three more armoured cars arrived on the scene with some 24 men, but as the troops attempted to enter the house to arrest the youth they were attacked with rocks, bottles and stones. The patrol commander then gave orders for the arrest of the ringleader and abandoned the search for the youth; by this time, however, the whole village had turned out and the soldiers were attacked and driven back to their vehicles by an estimated 250 people. The patrol commander managed to get into the leading armoured car when he was struck in the face by a brick thrown by a man standing on the front of the car. Amidst a fusillade of stones the commander elevated the car's machine-gun so that he could deal with his assailant but at the same time avoid hitting the crowd; he fired one burst which killed the assailant, the remaining bullets hitting a wall and causing no other casualties. A Greek Cypriot woman was also killed in the disorders, but a pathologist's report confirmed that she was not killed by gunfire but was probably hit on the head by a stone. In addition to the two Greek Cypriots who were killed, 13 others were taken to hospital and 22 of the security forces suffered injuries from stone-throwing.

In a statement to the House of Commons on the Avgorou incident, Mr. Lennox-Boyd (Colonial Secretary) pointed out that the village had "a bad reputation and a long history of Eoka associations." He added: "The patrol commander was plainly carrying out his duties, first in ordering the Eoka slogan to be removed and later in endeavouring to arrest the man whom he considered to be the ringleader of the attacks being made against his troops. Throughout the incident he acted with great calmness and restraint; the moment of opening fire was delayed as long as possible, and was then only done by himself personally to save the lives of his men and to protect his vehicles."

In a broadcast on July 14, Sir Hugh Foot said that there would be no hesitation in dealing with anyone who was "mad enough to wish to plunge Cyprus into civil war." He again pleaded for an end to violence and communal strife between Greeks and Turks, stressing that the alternative was "conflict which will cost countless lives, ruin everything, and settle nothing."

As there was no response to the Governor's appeal, new and stringent security measures—the most far-reaching since the start of the emergency—were imposed by the Cyprus Government on July 20 for a period of one month. They included (*a*) a night curfew in all towns from 7 p.m. to 4.30 a.m.; (*b*) powers for district security committees to impose day curfews whenever necessary; (*c*) a ban on all road traffic during the curfew period; (*d*) a ban on movement outside village areas during curfew hours without special permission. A week earlier it had been officially announced that the police forces in Cyprus were being doubled and that 300 police reinforcements were being flown out immediately from the United Kingdom.

The restrictions were imposed after a week in which 26 people were killed and 20 wounded—the worst record of communal violence since the emergency. In announcing the new regulations, Sir Hugh Foot expressed bitter disappointment that his appeal for communal peace had gone unheeded, and stressed that it had become necessary "to set aside all considerations and take measures to restore peace between Greeks and Turks."

On July 22 the police and security forces launched island-wide operations—under a 48-hour standstill curfew—to round up Greek and Turkish terrorists who were known or believed to have planned murder, arson, or other violence or intimidation. At the same time a censorship was imposed on all outgoing telegrams and radio messages for the duration of the 48-hour period of operations. In a press statement on the following day, Sir Hugh Foot announced that 1,200 Greeks and about 50 Turks had been arrested during the round-up, and that the Turkish terrorist organization (T.M.T.) had been banned [Eoka has been outlawed since September 1955]; he explained that the disparity between the numbers of arrested Greeks and Turks

was due to the difference in extent of the two terrorist organizations, Eoka being highly organized and of long standing whilst the T.M.T. was comparatively recent.

An appeal for the cessation of violence was made on July 31 by the British Prime Minister, Mr. Macmillan. It was given the widest publicity in Cyprus (over 1,000,000 leaflets being distributed giving Greek and Turkish translations) and was worded as follows :

" Humanity demands that violence in Cyprus must stop. Killing, wounding, and damage to property can do nothing but harm to the interests of all the communities of the island. I am sure that the ordinary people of Cyprus desperately want peace and security. I therefore make this appeal to all concerned, within the island and outside it, to refrain from any action which would contribute to further violence. I am sure that this appeal will be fully supported by the Prime Ministers of Greece and Turkey, as by men of good will everywhere."

Mr. Macmillan had previously appealed to the Prime Ministers of Greece and Turkey (M. Karamanlis and M. Menderes) to make similar appeals for the ending of communal violence in Cyprus. Both the Greek and Turkish Premiers issued such appeals, M. Karamanlis on July 30 and M. Menderes on Aug. 1.

In Cyprus itself, a similar appeal had been jointly issued on July 12 by Sir Hugh Foot, Dr. Themistocles Dervis (the Greek Cypriot mayor of Nicosia), and M. Rauf Denktash, deputy to Dr. Kutchuk (the Turkish Cypriot leader) ; it called upon everyone in Cyprus " to stop violence at once " and to " let bloodshed cease here and now."

Sir Hugh Foot announced on July 17 that Archbishop Makarios had also appealed for the ending of communal violence, in response to a message which he (the Governor) had sent to the Archbishop in Athens. Whilst the Archbishop had expressed his readiness " to join in any efforts to end Greek-Turkish friction and bloodshed," he had also alleged that the British authorities had failed to give Greek Cypriots " effective protection " against Turkish terrorism—an allegation which Sir Hugh described as " unacceptable."

August. - Eoka " Truce " proclaimed after Killing of British Soldiers. - Murder of Sergeant Hammond. - British Successes against Terrorists. - Ending of " Jamming " of Athens Radio Broadcasts.

aflets signed " Dighenis " were distributed in Nicosia on 4 announcing that the Eoka leader had ordered " an ediate stoppage of all activity against British and Turks," adding that there would be " a resumption of immediate n against both British and Turks " as from Aug. 10 if there " further British or Turkish provocation." The Turkish T. also announced on the following day that its armed ps would " cease activities until further notice."

e truce was the third of its kind proclaimed by Eoka since eginning of the emergency. The last, called in March 1957, d for a year and ended in the spring of 1958, when the rist organization resumed killings, organized a sabotage paign against Government property, and called for a ott of British goods.

e latest Eoka " truce " was announced after the killing of two ish soldiers 24 hours beforehand (see below), and after a week-end mmunal violence in which a dozen Greek and Cypriot civilians murdered. The victims included three Greek Cypriot youths, and stabbed to death at a village in eastern Cyprus, two sh auxiliary policemen, shot dead while cycling in Larnaka ; -year-old Greek Cypriot and his 75-year-old wife, who were with their throats cut in a village in western Cyprus ; and a 56-year-old Greek Cypriot woman whose decapitated body was found at her home in Nicosia. Six more Greek Cypriots—all men—were murdered in different parts of the island in the week after the Eoka " truce " was proclaimed ; in all these cases, however, the murders were attributed to Eoka gunmen acting against so-called Greek Cypriot " traitors."

Two British soldiers were murdered by Eoka gunmen on Aug. 3—Sergeant Reginald Hammond, who was shot in the back while walking with his two-year-old son in a Nicosia suburb ; and Lieut.-Colonel Frederick Collier, who was also shot in the back while working in his garden at Limassol. Greek Cypriot passers-by refused to go to the assistance of Sergeant Hammond as he lay dying in the street with his weeping child by his side.

The brutal murders aroused intense anger and indignation among the British forces, who cordoned off the areas and rounded up many suspects for questioning. On Aug. 5 it was officially announced that Andreas Yakoumis, a 17-year-old Greek Cypriot youth, had been arrested in connexion with the murder of Sergeant Hammond and would appear in court.

Yakoumis was committed for trial on Aug. 18 on a charge of murdering Sergt. Hammond. At the preliminary hearing a Greek Cypriot police officer read in court two statements alleged to have been made by the accused ; in the first, Yakoumis was alleged to have said that he had been given a loaded revolver by a friend and told to " go and kill an Englishman," and in the second he was alleged to have admitted killing Sergt. Hammond with this revolver.

A 20-year old Greek Cypriot, Andreas Eleftheriou, testified that he had seen Yakoumis running away from the scene of the murder with a revolver in his hand ; he identified Yakoumis in court and said that he had known him before.

During much of August the security forces carried out widespread operations against Eoka terrorists in many parts of the island, with a considerable measure of success. Six leading terrorists (unnamed) were officially reported captured on Aug. 8 ; three armed terrorists (all young men in their twenties) were killed near Lysi village on Aug. 23 by a patrol of the Royal Ulster Rifles, which suffered no casualties ; and a fourth terrorist was shot dead by a British soldier near Vavlas village on Aug. 27. A large haul of arms and ammunition was captured by men of the Royal Ulster Rifles at Lysi, a notorious centre of Eoka terrorist activities.

The restrictions imposed on July 20 were partially lifted on Aug. 6, when night curfews were abolished in all parts of Cyprus except Famagusta and a few villages, including Lysi ; the restriction on night travelling in urban areas was also lifted, but the ban on travel between towns remained in operation.

On Aug. 11 the Cyprus Government ended the jamming of Athens Radio broadcasts to Cyprus, which had been imposed in March 1956 because of the violent and inflammatory anti-British broadcasts directed from Greece to the island. It was explained in London that this action had been taken because of the " improvement in the tone of Athens Radio noticed in Cyprus."

September. - Truce broken by Eoka. - Further Murders of British Nationals. - Forces' Successes against Terrorists. - Mrs. Castle's Criticism of British Troops. - Repudiation by Labour Party. - The Yakoumis Trial.

Despite the truce proclaimed by Eoka, two members of the security forces were killed by terrorists in Nicosia on Sept. 1-2 —Assistant Police Superintendent D. T. M. Thomson, a New Zealander, who was shot in the back in Ledra-street (the notorious " murder mile ") while entering his car ; and Warrant Officer F. O'Hagan Sloane, of the R.A.F., who was shot dead by a gunman who fired at him from a passing taxi ; Mrs. Sloane, who was walking with her husband, was also fired at and wounded.

Further terrorism occurred in Nicosia on Sept. 18, when Eoka gunmen shot at Mr. J. P. Wentworth, the American Vice-Consul, who was taken to hospital in a serious condition ; at a British airman who was walking with his wife and child, and who was only slightly injured ; and at two Turkish Cypriots, one of whom died from his wounds. A Turkish crowd immediately retaliated by setting fire to one of the principal Greek Cypriot churches in Nicosia. On Sept. 26 Major-General D. A. Kendrew (director of anti-terrorist operations in Cyprus) narrowly escaped assassination when terrorists detonated an electrical mine in the road near Government House seconds after his car had passed ; a soldier in an escorting jeep was badly wounded by the explosion and subsequently died from his injuries.

Four Eoka gunmen were killed on Sept. 2 in a pitched battle with British troops at Liopetri, a village 15 miles from Famagusta. The terrorists—all of whom had prices on their heads, and two of whom had escaped from the Pyla detention camp barricaded themselves in a strongly-built stone barn and held out for four hours before they were wiped out by the British troops, one of whom was killed ; rocket-launchers, sub-machine guns and grenades were used to break into the building, where a large quantity of automatic weapons and ammunition was found.

A British soldier (Pte. David Morrison, of the Argyll and Sutherland Highlanders) was killed and three others wounded by terrorists in a night ambush on Sept. 13 in a remote area near Paphos. The security forces immediately made intensive searches of villages in the area in an effort to find the killer of Private Morrison ; at Kathikas, one of the villages searched, a Greek Cypriot was shot dead after he had attacked and stabbed two of the British soldiers.

Allegations of ill-treatment of villagers by the troops carrying out the searches were made by local Greek Cypriot leaders, including the mayor of Paphos.

A deputation from Paphos visited the District Commissioner on Sept. 15 and alleged that many Greek Cypriots had received bayonet wounds, head injuries, bruises and cuts during searches by troops at the village of Theletra ; it was also alleged that the village priest had had his hair cut off and his beard burned with a candle. The Mayor of Paphos alleged that at least 50 Greek Cypriots were in hospital as a result of injuries sustained in the searches, while other local Cypriot leaders alleged that troops had entered houses and smashed furniture and doors.

Subsequent investigations showed these allegations to be greatly exaggerated and largely unfounded, an interim report by the Cyprus Government (Sept. 16) stressing that none of the villagers had suffered any serious injury Unbridled accusations of misconduct by British troops, made by Greek Cypriot politicians and the Greek Cypriot press, were refuted in a sharply-worded letter by Sir Hugh Foot to the mayor of Kyrenia (Sept. 21) in which the Governor wrote :

" You . . . have no word of regret for the killing of Private Morrison, no word of condemnation for the murderers, no word of compassion for a young soldier or his parents. You speak only of searches. . . . You seem to be concerned with minor injuries while by your silence you appear to condone murder."

After describing how Private Morrison had been killed, Sir Hugh Foot continued : " When news of the killing came that evening to the battalion, his comrades were naturally furious. Contingents were sent out at once to carry out searches in pursuit of the killers. I am not surprised they were rough with those who resisted arrest, particularly when two soldiers of the battalion were savagely stabbed in Kathikas village. Nor am I surprised some damage was done in the searches. It is impossible to search for arms in cleverly concealed hides without doing damage. . . . But while damage was done and personal injuries caused, I am satisfied from the report of the special investigation team that, although they were extensive, damage and injuries were minor. No villager had any injury which made it necessary for him to be detained in hospital ; and under standing instructions compensation will be paid where it can be shown that unnecessary damage has been done."

On the same day that Sir Hugh Foot's letter was published, Mrs. Barbara Castle, M.P.—then vice-chairman of the British Labour Party, and now chairman—made a statement in Nicosia in which she expressed her belief that British soldiers were being " permitted and even encouraged by the authorities to use unnecessarily tough measures in searching villages in areas where a shooting incident has taken place on the grounds that the men are engaged in hot pursuit."

Mrs. Castle was making a three-day private visit to Cyprus to inquire into the alleged ill-treatment of villagers in the Paphos area by the Argyll and Sutherland Highlanders. She had previously paid private visits to Athens and Ankara, and had had an interview in the Greek capital with Archbishop Makarios, who had explained to her his plan for an independent Cyprus under U.N. guarantee (see page 16154).

Mrs. Castle's allegations were immediately refuted by Service chiefs in Cyprus and, according to press correspondents, were understood to have aroused widespread resentment among British troops in the island. In London, Mrs. Castle was strongly criticized by Mr. James Matthews (a trade union member of the National Executive Committee of the Labour Party), who said that he entirely dissociated himself from her remarks and that it was " deplorable " that Mrs. Castle should have made " such an unjustifiable criticism " of the British troops in Cyprus. Mr. Matthews (an ex-soldier) added : " Having had some experience of the sort of things tolerated by our troops in Cyprus, I can well understand their feelings when comrades are shot in the back. . . . It would be better if Mrs. Castle were to try to understand the difficulties experienced by our troops in the island. . . . "

After a meeting at the House of Commons on Sept. 23, at which Mrs. Castle saw Mr. Gaitskell, Mr. Aneurin Bevan, and other leaders of the Parliamentary Labour Party, a statement was issued by Mr. Gaitskell emphasizing that the Labour Party was " horrified and disgusted " at the brutal murders committed by the terrorists in Cyprus, and appreciated " the great strain placed upon our forces and the almost intolerable provocation to which they have been subjected."

Mr. Gaitskell's statement—which, in effect, constituted a repudiation by the Labour Party of the remarks attributed to Mrs. Castle—was worded as follows :

" Mrs. Castle's visits to Greece, Turkey, and Cyprus were made in a purely personal capacity and not in any way as a representative of the Labour Party. This is also the case as regards her statements to the Press. On her return to London, however, she was anxious to inform some of her colleagues who were most closely concerned of what had transpired in the course of her visits.

" As my colleagues and I in the House of Commons have repeatedly said, we have been horrified and disgusted at the brutal murders committed by terrorists against other Cypriots and against British troops. We also appreciate the great strain placed upon our forces, and the almost intolerable provocation to which they have been subjected.

" It appears that Mrs. Castle was not fully and accurately reported in the comments she is supposed to have made on the British forces in Cyprus. I understand she will make a further statement on radio and television to-night [see below] explaining her point of view.

In a televised interview the same evening, Mrs. Castle said that she was " not making any allegation against the troops but against the policy of the authorities which is putting the troops in an impossible position." She added :

" I don't think life in Cyprus is anything but extremely difficult for our troops. The position is critical there simply because of the Government's policy. The troops are being used to impose a policy fiercely opposed by the overwhelming majority of the people. . . . If the Government adopts a tough political policy, it is not surprising that the troops use toughness in carrying out that policy, and that brings about a tough attitude in the villages. There is a growing toughness all round which I found seriously alarming. We are getting into a vicious circle which must be broken through."

The Greek Cypriot youth Andreas Yakoumis was acquitted on Sept. 13 of the murder of Sergeant Hammond in Nicosia on Aug. 2 (see above), after a six-day trial before a special court presided over by Mr. Justice Boyle.

When the trial of Yakoumis opened on Sept. 8, the witness Eleftheriou withdrew the evidence he had given at the preliminary hearing, alleging that it had been extracted from him " under pressure and force." He denied that he had ever met Yakoumis, alleged that he had been beaten by the police, and said that he had made his former statement because he was " afraid." [Eleftheriou, the first Greek Cypriot to have given evidence against another in a murder trial, had been under police protection for fear of Eoka vengeance.]

Yakoumis also made allegations of maltreatment against the police, alleging that he had been beaten and " tortured " and saying that he had admitted killing Sergt. Hammond because the police had allegedly threatened to beat him to death. The Greek Cypriot police inspector who had taken a statement from Yakoumis testified, however, that the defendant was " cheerful " at the time, bore no marks of violence, and had made and signed the statement voluntarily. The defence objected to the production of Yakoumis's statement on the grounds that it had not been made voluntarily, that Yakoumis had allegedly been ill-treated, and that he was of abnormal personality. The prosecution agreed that Yakoumis should be medically examined to ascertain his mental condition, and at a later stage of the trial it was stated by doctors that Yakoumis was a psychopath who could not be expected to estimate the consequence of his actions.

Giving judgment on Sept. 13, Mr. Justice Boyle said that there were " lamentable gaps " in the prosecution's case. Specifically, the Crown had failed to prove that the body found on the roadside at Ayios Dhometios (the Nicosia suburb where the murder took place) was that of Sergt Hammond ; that the bullets exhibited in court were in fact taken from Sergt. Hammond's body ; and that the revolver produced was the weapon with which Sergt. Hammond had been killed. He (the judge) was completely satisfied that Yakoumis had made his statements to the police freely, voluntarily, and without ill-treatment, and that the allegations of maltreatment and " torture " were figments of Yakoumis's imagination. There, was, however, no independent evidence to corroborate Yakoumis's confessions—on which the case against him solely rested—and the defendant would therefore be acquitted.

Yakoumis was immediately re-arrested after his acquittal and served with a detention order under the emergency regulations authorizing the indefinite detention of terrorist suspects. Eleftheriou was subsequently sent to prison for eight months for giving false evidence in the Yakoumis trial.

About 100 Greek and 30 Turkish Cypriots were released from detention camps on Sept. 22 in what was interpreted as a Government gesture to ease tension before the introduction of the new " partnership " plan for Cyprus (see 16450 A). It was stated that about 1,900 Greeks still remained in detention camps, together with 32 Turks.

October. - Intensification of Eoka Terrorism. - Further Killings of British Nationals. - The Murder of Mrs. Cutliffe. - Mass Round-up in Famagusta. - Resumption of " Jamming " of Athens Broadcasts to Cyprus.

October was one of the blackest months of the Cyprus emergency, a total of 44 people being killed and about 370 injured. Of those killed, six were British civilians, including the first British woman to be deliberately murdered by Eoka ; ten were British soldiers, killed in ambushes or by electrically-detonated mines laid on roads used by military vehicles ; 17 were Greek Cypriots killed by Eoka ; and 11 were terrorists killed by the security forces. Of those injured, about 90 were British nationals—nearly all members of the security forces—and about 280 Greek Cypriots, of whom some 250 were injured in the events which followed the murder of Mrs. Cutliffe in Famagusta (see below).

The six British civilians killed in October were Mr. John Smith (35), employed at a radio monitoring centre, who was shot dead from a passing car in Larnaka on Oct. 2 ; Mrs. Catherine Cutliffe (42), wife of a British soldier and mother of five children, who was killed by gunmen on Oct. 3 while shopping in Famagusta ; Mr. John Brooks (76), a retired naval commander, who was killed—and his wife seriously injured—on Oct. 12 when his car blew up after striking a road-mine laid by terrorists at a remote village in the Famagusta area ; Mr. Arthur Dallon (55), a warder at Kokkinotrimithia internment camp, who was shot dead near Nicosia on Oct. 16 while on his way to visit Greek Cypriot friends ; Mr. Frederick Sharman (60), a businessman, killed on Oct. 24 while entering his car in

Nicosia ; and Mr. Brian Preece (17), a NAAFI clerk and son of a British serviceman, who was shot dead in Famagusta on Oct. 31 while on his way to work.

Mrs. Cutliffe (whose youngest child is a 15-month-old baby) was shopping in Famagusta with a friend, Mrs. Elfrieda Robinson, when both women were shot in the back by two Greek Cypriot youths who fled immediately afterwards ; Mrs. Cutliffe was killed on the spot and Mrs. Robinson seriously wounded and taken to hospital The brutal murder aroused furious anger among the British forces and the British community, and Famagusta became the scene of the biggest round-up of the emergency ; the town was placed under virtual military occupation, a stringent curfew was imposed, and every Greek Cypriot male between the ages of 15 and 30 was rounded up for interrogation. Sir Hugh Foot and General Kendrew flew to Famagusta immediately the news of Mrs. Cutliffe's murder became known.

The Cyprus Government announced on Oct. 5 that an official inquiry was proceeding into certain incidents that had occurred during the round-up. It was officially stated that of 650 Cypriots arrested after the murder of Mrs. Cutliffe, 250 had received injuries ; that 17 were in hospital, seven with serious injuries ; that two Greek Cypriots had died ; and that a 12-year-old Greek Cypriot girl had also died of heart failure during the operations.

The Nicosia Correspondent of *The Times* commented as follows on the situation in Famagusta : "The murder [of Mrs. Cutliffe] has inflamed passions and turned the island almost into a cauldron of hatred. There is little doubt that the troops who carried out the searches were in the grip of sheer cold rage, and there is no pretence that kid-glove methods were used in rounding up the Cypriots. Excesses were probably committed in the heat of the moment—hardly to be wondered at in view of the cold-blooded brutality of the murder, which has stunned the British community"

The Nicosia Correspondent of the *Daily Telegraph* (Mr. John Osman) cabled : "There is no doubt whatever that the conduct of a number of troops was unsatisfactory for an hour or so after the murder and that they set about their task of rounding up Greek-Cypriot men with gusto. With other British observers, I was shocked when I saw rows of bloody and bandaged Greek-Cypriots lying on floors in Famagusta Hospital." At the same time Mr. Osman stressed that Greek and Greek-Cypriot propaganda had "gone wild with exaggeration" ; that there had been no question of the authorities encouraging any unnecessary violence ; and that, on the contrary, they had done all they could to prevent it

Mr. Osman commented as follows on the Greek Cypriot reaction to the murder of Mrs. Cutliffe : "This culminating crime is so unparalleled in foulness that it has pierced even the Greek Cypriot conscience to the effect of Greek Cypriot denials being published in newspapers that the murder was Eoka's work. These disclaimers ring emptily in view of the fact that only two weeks ago Eoka issued a leaflet in Famagusta announcing a campaign of indiscriminate attacks on Britons."

Both in Greek Cypriot circles and in Athens attempts were made to explain away the murder of Mrs. Cutliffe by asserting that it was not the work of Eoka ; these disclaimers were accompanied by charges of "mass brutalities" and "orgies" by the British troops engaged in the Famagusta round-up. In Athens, a Greek Foreign Ministry spokesman said that attacks on women were "not in the tradition of Greek fighters," whilst Archbishop Makarios condemned both the murder of Mrs. Cutliffe and what he described as "the blood orgy against Famagusta's Greek population on the part of the security forces which followed."

Eoka leaflets were distributed after Mrs. Cutliffe's murder repeating the above-mentioned allegations against the British forces but making no direct reference to the murder of Mrs. Cutliffe apart from insinuations that it was not the work of Eoka. The Cyprus Government stated, however, that there was "not one iota of evidence to suggest that it [the murder] was carried out by anyone other than Eoka terrorists."

The Mayor of Nicosia (Dr. Dervis) offered a reward of £5,000 on Oct. 9 for information leading to the arrest of the gunmen who killed Mrs. Cutliffe and wounded Mrs Robinson. A week later Dr. Dervis announced that he had received an anonymous letter naming a Greek Cypriot as the killer of Mrs. Cutliffe, and that the police were investigating the matter.

Apart from the murder of Mrs. Cutliffe and the other British civilians, Eoka launched a widespread campaign of ambushes in many parts of the island which cost the lives of ten British soldiers as stated above ; in nearly all these incidents trucks and other military vehicles were blown up by mines laid on mountain roads in the Troodos range and other remote areas.

An R.A.F. *Canberra* bomber was damaged on Oct. 20 by sabotage at Akrotiri airfield, no casualties being caused On Oct. 29 a time-bomb exploded near a *Comet* airliner of R.A.F. Transport Command just before it was due to take off from Nicosia Airport for Britain ; ten airmen were wounded, four of whom were detained in hospital. It was subsequently found that the time-bomb had been placed in one of the airmen's hand-luggage.

New and drastic security regulations were imposed on Oct. 16 to combat the mounting wave of terrorism, including the reintroduction of certain emergency measures which had been revoked a year earlier. Under the new regulations (*a*) the system of "danger areas" was reintroduced, and people entering or remaining in these areas were warned that they would do so at the risk of their lives ; (*b*) the security forces were empowered to take immediate armed action—i.e. to shoot at sight—against any unauthorized person found in such areas ; (*c*) powers of postal censorship were reintroduced so as to check the smuggling of arms by parcel post. It was explained that all "danger areas" would be clearly marked by warning notices.

Extensive anti-terrorist operations were carried out during the month under the command of Major-General Kenneth Darling, who succeeded Major-General Kendrew in October as director of anti-terrorist operations.

Few details were given of these operations, but it was understood that the round-up had achieved considerable success ; it was officially disclosed on Oct. 10 that 25 "active" terrorists, including an Eoka group leader, had been captured on the south coast of Cyprus. In a press statement in Nicosia on Oct. 22, General Darling stressed the necessity for every man in the armed forces, "butcher, baker or candlestick-maker," to become a good marksman ; he said that "the only Eoka terrorists I am interested in are dead ones, not live ones."

The jamming of Athens Radio broadcasts to Cyprus was resumed on Oct. 6, following a new anti-British radio campaign of unparalleled virulence. For a fortnight previously Athens Radio had made repeated scurrilous attacks on the British administration and the British forces in the island ; Sir Hugh Foot was described as a "gauleiter" and the British troops as "filthy cannibals" and "wild animals," while Hitler was extolled as "a saint in comparison with British crimes in Cyprus." This "hate" campaign compelled the Cyprus Government—in the words of a senior official - to jam the "daily dose of muck" from Athens Radio.

November (Nov. 1-15). - Arming of British Civilians. - Greek Cypriots dismissed from R.A.F. Bases and NAAFI Canteens.

After a week in which three more British civilians were killed by Eoka terrorists, the director of anti-terrorist operations (Major-General Darling) announced on Nov. 8 that arms would be issued to any British civilians who applied for them, women excepted. Many civilians accepted this offer and were accordingly issued with revolvers in Nicosia and other towns.

The three civilians murdered in the first week of November were Mr. Charles Woods (71), who had lived in Cyprus for 30 years and was known as warm friend of the Greek Cypriots ; Mr. Joseph Brander (44), manager of Barclays Bank in Nicosia ; and Mr. Wilfred Benson (34), acting manager of the Ottoman Bank in Nicosia. Mr. Woods was shot in the back on Nov. 3 while walking to work in a Nicosia suburb ; Mr. Brander was killed by a gunman on Nov. 6 while walking from his car to the door of his office ; and Mr. Benson was killed on Nov. 7 as he was stepping into his car outside the Ottoman Bank.

Ten British soldiers were killed in the first fortnight of November by terrorist ambushes and road-mining, mainly in the Troodos mountains and other remote areas. Several terrorists were also killed in gun-battles and round-ups, and a big quantity of arms and ammunition was seized during searches at the village of Karavas, in the Kyrenia district. The arms were found buried in the orchard of a priest who had previously been interned for acting as an Eoka courier ; in the same orchard the troops found a wanted terrorist who had been hiding for a week at the bottom of a well and who surrendered without resistance.

Several Greek Cypriots were murdered in different parts of the island by Eoka terrorists ; they included a Greek inspector of the C.I.D. who was shot dead while lunching in a Famagusta restaurant.

Two British airmen were killed and seven injured on Nov. 8 by a bomb which had been smuggled into a NAAFI canteen in Nicosia and stuffed in the upholstery of a settee ; this outrage occurred at the R.A.F. air station where terrorists had previously attempted to blow up a *Comet* airliner (see above). As a result of these bomb incidents, the security authorities announced on Nov. 10 the immediate dismissal of all Greek Cypriot employees—over 3,000 in all—working at air bases and NAAFI canteens throughout the island. It was stated that the dismissed workers would be replaced by R.A.F. personnel flown out from Britain, and that an appeal would be made in Britain for volunteer NAAFI workers in Cyprus.

An urgent appeal for 500 NAAFI volunteers for work in Cyprus—"sales staff, shop assistants, cooks and bottlewashers"—was accordingly launched in London on Nov. 10, any fit man or women between

the ages of 18 and 45 being eligible. There was an overwhelming response from men and women in all walks of life and from all parts of Britain, the recruiting campaign being closed on Nov. 13 after no fewer than 17,000 people had volunteered for NAAFI work in Cyprus.

Corporal B. E. Ford (22), of the Royal Signals, was sentenced by a Nicosia court-martial on Nov. 5 to nine months' detention and reduction to the ranks after pleading guilty to writing, duplicating and distributing leaflets announcing the formation of a British anti-terrorist organization.

Corporal Ford told the court that the leaflets were meant to be "more or less a joke" and that there was "no intention to terrorize anyone"; his counsel pointed out that Ford had been involved in three terrorist incidents during his 2½ years service in Cyprus, and that he had recently received Eoka threats that his house would be burned down and his wife and baby beaten.

[In September last leaflets signed "Cromwell" had appeared on the streets of Nicosia announcing the creation of a British anti-terrorist organization pledged to "strike back at Eoka" if murders of British civilians continued. The leaflets were officially regarded as a hoax and nothing further was heard of any such organization. Corporal Ford was apparently unconnected with the "Cromwell" leaflets, as he was charged in connexion with leaflets that he had typed and distributed at the beginning of October and which were signed "I.C.O."— Insurgents' Corrective Organization.]

Protests at the sentence imposed on Corporal Ford were made in the U.K. House of Commons by Members on both sides, Mr. Kershaw (C.) describing it as "scandalous" and Mr. Paget (Lab.) as "completely ludicrous." The Secretary of State for War (Mr. Soames) informed the House on Nov. 6 that the sentence had been reduced to 56 days, whilst on Nov. 12 he further announced that it had been completely waived by the C.-in-C., Middle East Land Forces (Lieut.-General Sir General Bower), although Ford would be reduced to the ranks.

A. SUDAN. — Re-engagement of British Experts. - British Arms Aid for Sudanese Forces.

The Sudanese Embassy in London announced on Oct. 16 that all former British officials in the Sudan who lost their jobs when their posts were Sudanized in 1953 could be re-employed if they made application for reinstatement.

An Embassy spokesman explained that the Sudanese Council of Ministers had recently decided to authorize the re-engagement of foreign experts, a decision which had already been put into effect. He added that there had in fact been a considerable recruitment of British experts for some time, and that 160 non-Sudanese nationals—of whom more than 95 per cent were British—had been employed by the Sudanese Government since January 1956. The spokesman said that teachers, engineers, doctors, and nurses were particularly wanted.

Under the treaty of 1953 (see 12794 A) no British or Egyptian national could hold posts in the Sudanese administration, judiciary, or armed forces.

The British Foreign Office announced on Oct. 18 that H.M. Government had agreed to provide the Sudan with a quantity of arms and equipment and to provide free training for some Sudanese military pilots. It was explained that this assistance was being provided free of charge because the financial position of the Sudanese Government had been temporarily weakened by difficulties in disposing of the cotton crop, these difficulties having threatened to delay the modernization of the Sudanese Army.—(Sudan Government Information Office, Khartoum - Times - Manchester Guardian) **(Prev. rep. 13729 E.)**

B. UNITED STATES. — Third Moon Shot.

A third lunar probe—*Pioneer II*—was fired by the U.S. Air Force on Nov. 8 from Cape Canaveral, but climbed to an altitude of only 1,000 miles before falling back to earth and burning up somewhere over East or Central Africa; it reached a velocity of only 16,000 miles an hour (compared with the 24,000 m.p.h. needed to escape from terrestrial gravity) and remained aloft for less than 45 minutes, during which time it was tracked by the Jodrell Bank radio telescope. It was officially explained that the experiment had failed because the third stage of the space vehicle failed to ignite.
(New York Times) **(Prev. rep. 16438 A.)**

C. LEBANON. — Special Powers Bill.

By 34 votes to one, with one abstention and several deputies absent, the Lebanese Parliament approved on Nov. 12 a Bill giving the Government of M. Rashid Karami powers to govern by decree for a period of six months in all matters relating to finance, economy, public security and order, the civil service, and the judiciary. The legislation was introduced by M. Karami with a view to restoring normal conditions after the disturbances of the past six months.—(Times) **(16439 A.)**

D. ARAB LEAGUE. — Clash between Tunisia and United Arab Republic. - Tunisia severs Diplomatic Relations with U.A.R. - Financial Assistance by Arab League to "Free Algerian" Government.

An open clash between Tunisia and the United Arab Republic occurred at a meeting of the Council of the Arab League in Cairo on Oct. 11 when the leader of the Tunisian delegation, M. Habib el-Shatti, accused the U.A.R. of "attempting to dominate" the League, whereupon the U.A.R. delegation walked out in protest. The Council had met to welcome Tunisia and Morocco, which had both joined the Arab League ten days earlier.

M. el-Shatti (Tunisian Ambassador to Iraq and Lebanon) said that Tunisia had held aloof from the Arab League in the past because "certain member-States have sought to impose their domination on the other delegations"; he alleged that the League was "working in favour of one faction only and was receiving orders from one member." **M. Abdel Hamid Ghaleb** (U.A.R. Under-Secretary for Foreign Affairs) then announced that he would withdraw "so that the head of the Tunisian delegation may not feel there is any intention of domination"; M. Ghaleb accordingly walked out with the rest of his delegation. **M. Fayek el-Samirrai** (Iraq), who presided, and **M. Abdel Khalek Torres** (Morocco) both deplored M. el-Shatti's allegations; the latter emphasized that Tunisia and Morocco had not reached any agreement to pursue a common policy inside the League, and paid tribute to the U.A.R.'s "positive role, both in its dealings with the countries of the Maghreb and inside the Arab League."

M. el-Shatti announced later the same day that Tunisia would withdraw from the session, and left for Tunis on Oct. 13. On the latter date the Council unanimously condemned the Tunisian statement, which was ordered to be expunged from the minutes, and invited the U.A.R. to return to its meetings. At the Sudanese delegation's proposal, the Council also invited Tunisia to return on Oct. 15, on condition that she did not again raise the issues which had caused the U.A.R.'s temporary withdrawal. The Sudanese motion was adopted by eight votes to nil, with the U.A.R. and Yemen abstaining.

The Tunisian Foreign Secretary, Dr. Mokkadem, informed the Ambassador of the U.A.R. on Oct. 15 that Tunisia had decided to break off diplomatic relations with the United Arab Republic. President Bourguiba explained his Government's decision to the Constituent Assembly on Oct. 16, and alleged that the U.A.R. had assisted the "Youssefist" plot against his life in the previous February (see 16242 B.)

President Bourguiba said that two years ago he had believed that there was merely a "misunderstanding" between Tunisia and Egypt, but he no longer held this view since the discovery of the Youssefist conspiracy in February last. Certain correspondence found on one of those arrested in connexion with the plot, and the fact that the person concerned held an Egyptian passport, proved that the Egyptian Ministry of the Interior was involved in the plot and that Egypt had "associated herself with murder." He added, however, that the "important thing" was still the unity of the Arab peoples, "even if they condemn us today." Although there could no longer be any official relations between Tunisia and Egypt, there could still be fraternal contacts between Arabs.

President Bourguiba said that many members of the Arab League shared Tunisia's feelings, but only Tunisia had had the courage to accuse Egypt of interfering in the internal affairs of member-States. After defending himself against charges in the Egyptian Press that he was "a tool of the imperialists," and declaring that he would be "nobody's vassal," President Bourguiba continued: "We choose to collaborate with the great Western Powers so that we might be able to face a possible French attack. I am Western and I will remain so. . . . Tunisia is a country weakened by French colonialism. She needs to lean on the friendship of a powerful country in order to consolidate her independence and continue her struggle. I succeeded in gaining the confidence of the Americans without entering into any pact, Atlantic or otherwise. Tunisia had the help of the Americans, just as the U.A.R. had Russian help at a certain moment." Maintaining that the U.A.R. was "not aware of the danger of Communism," he went on: "Once the Iron Curtain is lowered, there is no escape from the Communist grip. On the other hand, it is possible to leave the Western camp at any time. Our orientation is such as will help our Algerian brothers. . . ."

The Council of the Arab League decided on Oct. 18 to make a grant of £E.12,000,000 to the "Provisional Government of the Algerian Republic," in response to the latter's request. This sum, which was six times as large as that allotted to the Algerian insurgents by the League in 1957, was made part of the League's budget and was thus binding on all its members, including Tunisia.—(Le Monde - Times - New York Times)

E. CANADA.—Completion of Trans-Canada Pipeline.

The final portion of the Trans-Canada Pipeline came into operation on Oct. 23, thereby starting the flow of natural gas from Alberta to Toronto, Montreal, Ottawa, and intermediate cities. Construction of the 2,294-mile pipeline began in July 1956, the total cost being $875,000,000.—(Montreal Star)

A. UNITED KINGDOM. — Economic and Financial Policy. - Mr. Heathcoat Amory's Review of Britain's Economic Position. - Increase in Capital Investment. - Abolition of Hire Purchase Restrictions.

The Chancellor of the Exchequer, Mr. Heathcoat Amory, made a statement on Britain's economic position in a speech at the Mansion House on Oct 16, on the occasion of the annual dinner given by the Lord Mayor to the bankers and merchants of the City of London. During his speech he announced that the U.K.'s current surplus on its balance of payments for the first half of 1958 had reached the record figure of £334,000,000. He added a warning, however, that exports were falling because of world conditions, and called for a "sustained and vigorous export effort" to maintain the position.

The principal parts of the Chancellor's Mansion House speech are summarized below.

Mr. Heathcoat Amory said: "This has been in most respects a year of progress. There has been a very marked restoration of confidence in sterling, in the safeguarding of honest money, in our ability to deal with our own problems. For 12 months in succession our gold and dollar reserves have risen. Although a third of the rise has been due to special borrowings, it is a satisfactory result, more especially as our sterling liabilities have actually fallen a bit. Foreign confidence in sterling is now high. If we can continue to conduct our affairs with restraint and a full regard for sterling we shall, I hope, be able to look back to 1957 and 1958 as a decisive turning-point in our economic affairs.

"Of course, our trading position is the basis of our financial strength. If that is strong then we can weather the occasional storms which blow up in the exchange field. In the first half of this year we had a current surplus of £334 million, more in six months than in any 12 months since the war.

"But I must blend warnings with congratulations. Our policies have enabled us to take advantage of the favourable conditions of the last year; but the figures owe much to the fall in import prices and the stability in the volume of U.K. imports. We cannot expect those conditions to last, indeed, our exports are already falling. We shall have to work very hard to do anything like as well in the year to come, and we shall need a sustained and vigorous export effort.

"There is another matter which affords me a good deal of anxiety. We have had over the past 12 months an average increase in wages which, though less than the preceding year, exceeds any increase in productivity that can have been secured. If a similar increase were to be repeated during the coming year, the result could not fail to involve an appreciable element of cost inflation. This is exactly what we can least afford at the present moment, when it is above all else important that our industry should continue to be competitive in world markets If through increased costs we price our exports out of the markets of the world, our balance of payments and the strength of sterling would once again be put in jeopardy.

"I am sometimes asked why I pick out wage increases in particular to express anxiety about. My answer is that wages are not only by far the largest element of costs of production under our own control, but wage rises over recent years have considerably exceeded both increases in production and increases in the cost of living. Indeed, the cost of living has been virtually stable for nearly a year. The only real risk of mass unemployment would arise if our currency collapsed and we found ourselves unable to buy our food and the raw materials we need to keep industry going.

"But our progress depends not only on ourselves, but also on the position of world trade and industrial activity. This year, for the first time since the war, the free world has faced an actual decline in world trade. This is a very serious matter, because not only our domestic policies but also the posture of the free world in the face of the Communist threat depend upon steady economic growth based on dependable currencies.

"At three recent meetings a great deal of thought has been given to these problems: of the O.E.E.C. in Paris, of the Commonwealth in Montreal, and of the International Monetary Fund and International Bank in New Delhi. The general lines of policy are quite simple. First, the greatest possible freeing of the channels of trade and payments, with the dollar and sterling playing their roles from strength; secondly, high levels of investment, with regard for the special needs of the newly developing countries; and finally, an expanding role for the great institutions of the free world—the Commonwealth and sterling area, the O.E.E.C., and on a wider scale the I.M.F. and the International Bank

"Both our words and our actions in all these meetings have been the more effective because I have had behind me a sound economy and a dependable currency. They are, indeed, the foundations on which we have now been able to start encouraging a steady resumption of expansion. As a result of Montreal we shall do this in full harmony with the Commonwealth. And as a result of New Delhi, the Fund and the Bank will not only have greater influence but also larger resources to help to ensure sound development and to prevent temporary setbacks from spreading into recession. Thus we can proceed with our expansion with greater assurance.

"At home, our task has been to convince our own people that the Government was really prepared to take measures against continuing inflation, even if these were uncomfortable. We have faced criticism—that we have deliberately created unemployment and a stagnant economy. We want the highest possible level of employment we can get, without endangering the foundations on which employment itself rests. The present state of our economy, with a record level of both investment and consumer expenditure, a record of personal savings, and a steadily strengthening external position, cannot possibly be described as stagnant.

"The importance of a stable currency can hardly be exaggerated. Since the war few if any countries have attained it. It would be extraordinary if we could do so without some sacrifices. We have suffered an increase in unemployment. Yet even now, when the world has been going through a phase of recession, unemployment is a little over 2 per cent, a far lower figure than in practically any other industrial country, and one which before the war would have been thought of as impossible of achievement.

"However, we must not be complacent. I have always felt that to be denied for long the opportunity of regular employment is one of the worst misfortunes that can face a fit person in a modern society. We must never relax our efforts to improve our economic techniques by experience so that we can move steadily towards the objective of offering every person who wants to work the opportunity of productive employment, without overstraining the economy.

"Our objective has always been clear: as rapid a growth as is sustainable, without a return to inflation. Economic growth comes mainly from growth of real capital; and our rate of investment is still at record levels, far above what was achieved before the war or at any time since. In 1938 investment took 13 per cent of the gross national product; in 1957 it took 18 per cent of a far larger total. A high proportion of this investment is in productive machinery and equipment—a higher proportion than in the United States. Moreover, the proportion of investment needed for mere replacement has gone down. The rate of real expansion—of net investment—has doubled since 1948. This is not stagnation.

"Consumption has continued to rise—in the first half of 1958 it was about 2½ per cent higher than a year ago. It is encouraging, too, that the cost-of-living index stands at the same figure to-day as it did 10 months ago. This should give us hope that we are on the right road, and encouragement to persevere upon it."

Referring to the latest Exchequer results, the Chancellor said: "I budgeted for a surplus 'above the line' of £364 million during 1958-59; and in the first half-year revenue has been slightly ahead of expectations and expenditure slightly below. I see no reason at this stage to revise my Budget forecast. 'Below the line,' most items of Government expenditure are running roughly in line with my Budget forecast, but there are some significant reductions; notably, loans to local authorities at a very small figure reflect the continued success of these authorities in borrowing from the market."

After reviewing the various relaxations of the Government's monetary policy, the Chancellor said in conclusion that he was completely confident that the long-term prospects for British industry were now firmly based and new opportunities were opening out. He added: "Although our first priorities must always be exports and investment, I am conscious that consumption is in the end the object of all our economic efforts, and also that investment will not take place unless the goods which it will produce can be sold. I was glad therefore to note the initiative of the banks in personal loans, and also that the President of the Board of Trade has been able to reduce and in some cases to remove the initial deposits on hire purchase [see below.] All these measures will contribute to an orderly process of expansion, with particular emphasis on investment in the private sector.

"There is another change we have felt it right to make. In our latest review of public-sector investment we have been able to permit a resumption, after a year's pause, of the increase in the total. Therefore the total in 1959-60 is likely to be quite appreciably higher than this year or last. . . ."

Increase in Capital Investment in Public Sector.

An increase of about 10 per cent in capital investment in the public sector in 1959-60 was announced by the Chancellor on Nov. 3, during the Debate on the Address in reply to the Queen's Speech.

Reviewing economic developments in the past year, Mr. Heathcoat Amory said that he was able to give the House "an encouraging report," stressing in particular the "heartening return of confidence" in sterling as a result of which the gold and dollar reserves had gone up by £450,000,000. One reason for the fall in imports had been the Government's policy of allowing merchants to buy freely in the cheapest markets of the world—an opportunity which they would have otherwise lost. The rise in the reserves during the third quarter of 1958 by £15,000,000 was "a satisfactory result, bearing in mind that the third quarter is normally a period in which we draw on our reserves."

There had been a small decline in exports in the early months of 1958, which had been accentuated since and had recently been at the rate of about 6 per cent. Most of this decline had been in exports to the rest of the sterling area and to other primary producing countries—a trend which had long been expected and was bound to take place when the primary producing countries had drawn down their reserves as far as they thought prudent. "I would expect the declining trend of our exports to certain markets, although not to all, to continue for a while," the Chancellor went on. "There may be an earlier recovery in the fortunes of the primary producers, but it is difficult to forecast the trend of commodity prices. The vast

American economy is picking up, and other manufacturing countries may soon follow. Even so, I think we must expect to have to wait a while until the primary producing countries have replenished their reserves before we find those markets for our exports picking up." Although the fall in exports would affect the balance of payments, he expected that the latter was "likely to remain strong over the months ahead," and that the fall in exports would "only bring down the surplus on current account from the exceptional level of the first half of 1958 to a level which perhaps might aptly be described as still respectable."

After referring to the decisions of the Montreal and New Delhi meetings, Mr. Heathcoat Amory reiterated that there was a responsibility on the Government to do all it could to ensure that consumer demand did not develop in a way that would lead to inflation. For the present, that did not seem to be an immediate danger, but it could easily become one again. It was for that reason that the Government had proceeded gradually and cautiously in encouraging re-expansion, and he was "certainly not going to apologize for the cautious way in which we have proceeded in these circumstances." The Government had not been willing, nor were they willing to-day, "to open the flood-gates," and it was in the nature of most of the methods which the Government were operating that they took some time to develop their full effects. If they tried to get results too quickly, they might find that they had once again overloaded the production system and built up inflation.

Dealing with the growth of incomes, the Chancellor said that what happened to the level of wages was crucial—not merely because wages were themselves so large an item in costs, and had been rising in recent years faster than either production or the cost of living, but also because other kinds of income had a strong tendency to move in sympathy. The increases in wages negotiated in the present year averaged out at about four per cent. Although this represented a smaller rise than in previous years, the country had been able to preserve price stability only because of the fall in prices of imported foods and raw materials. That was not likely to happen again.

The Chancellor continued: "A general increase in money incomes in present circumstances is justified neither by the cost of living, which has been pretty well stable now for almost a year, nor by an increase in production. Wage increases in the coming year on the scale we have had this year might be sufficient to develop another run of price inflation. It is vitally important that this should not happen. I cannot emphasize too much that whether we can expand production safely or not depends on moderation in claiming higher money incomes more than on any other single fact. The objective of our policy has been to strengthen the bases on which our economy as a whole rests, because of our conviction that full employment itself could not long endure unless sterling is strong and prices reasonably stable."

It was true (Mr. Heathcoat Amory continued) that there had recently been a fall in the index of industrial production. After rising to a peak about the middle of 1957, it had now fallen by about three per cent compared with a year ago. The index of production for all goods and services had fallen rather less; it was down by about two per cent in the second quarter of 1958 compared with the same period of last year. The main decline had been in exports, with some reduction in Government expenditure on goods and services and some decline in the stock position. Stocks as a whole were still increasing at the date of the last estimate, though at a lower rate.

In fixed investment there had been no setback. Net investment in fixed capital loans was about 65 per cent above 1951; total investment in 1957 had been five per cent above that of 1956; and the latest figures for the second quarter of 1958 showed that the volume was about three per cent higher than the corresponding period of 1957.

Consumption had also tended to increase, and he believed it would continue to do so. For the first half of 1958 personal consumption expenditure was about two per cent above the same period of last year. People were spending, eating and saving more than ever before, but prices had been practically stable; the price index was the same in September as it was 10 months ago, and personal savings were running at a record rate.

"Taking the picture as a whole," Mr. Heathcoat Amory summed up, "it is surely absurd to talk about stagnation. The economy is being strengthened at every point. It is with this knowledge that I can turn with confidence to the future."

Discussing investment in the public sector, the Chancellor said that for several years there had been a strong upward current, and a year ago it had been found necessary to call a halt for a time. It had been decided that for 1958-59 and 1959-60 it should not exceed the level of 1957-58. During the present summer, however, there had been a review in the course of which the Government had taken steps to stimulate employment, particularly in those areas which were suffering from unemployment [see 16330 A.] He went on:

"I expect that by the end of this year the rate of public investment will be running appreciably above that of last year, which is estimated to have been about £1,425 million. For next year, 1959-60, we envisage a level in public-sector investment of the order of £125 million to £150 million higher than that of last year. This should be sufficient to offset any fall that is at all probable in private fixed investment. By itself this increase in expenditure is equivalent to jobs for up to 150,000 workers in the two-year period—a major reinforcement of the economy.

"We have based our plans on the expectation of a resumption of economic expansion and its continuation over the next few years. Some people detect signs that the present level of private industrial investment may not be maintained next year. I have been impressed by the resilience it has shown so far, which seems to me to illustrate a fundamental confidence in the future. It is my expectation that when the level of production turns upwards, this will usher in a further period of expansion in every part of our economic life.

"In the public sector this has two consequences. First, it means that our task must be to ensure that enough resources are devoted to what may be called productive public investment needed to support expansion, such as electric power, railways and roads. The Government are providing a further considerable investment under these heads There will be a large increase over last year both in absolute and percentage terms. Big programmes in the non-industrial field of schools, technical colleges and universities are continuing to unfold Expenditure on hospital development continues to increase. Increases in investment are also expected in water, sewerage, and a wide range of other services

'We must beware of the danger of making a mistake which has been made before. That is to embark upon expansion of public investment without fully weighing the likelihood that by the time the programme comes to fruition it may have overloaded the economy. What we have done, therefore, taking advantage of easier economic conditions, is to bring forward into the next 12 months some of the expenditure which would otherwise have had to be incurred later. Typical examples are maintenance and minor works. But there will also be some projects of more substantial dimensions.

"Looking forward a little, therefore, our present expectation is that we shall need to keep the level of public-sector investment in 1960-61 at about the same level as that to which it will be rising in 1959-60. In the next 12 months we shall be bringing forward some public investment at a time when private investment is slackening, but without embarking on long-term expansion, which would leave insufficient room in a couple of years to accommodate that initial further expansion of private investment we shall need.

The Chancellor concluded: "I claim that the survey I have just given shows that we can regard the past with satisfaction and the future with confidence. I shall not try to make a precise prophecy about the immediate future. I do not believe that any decline in activity will be large before the upturn comes—the upturn to which our policies are directed. In the meantime we shall continue to take such action as the situation demands. We have reason to feel fortified and encouraged by our recent progress. I believe that, building on the foundations of a strong economy, we can hope to enjoy a measure of progress without losing stability, and move ahead with confidence in our aims and in ourselves."

Opposition Criticisms of Government's Economic Policy.

The Chancellor's statement was made in reply to Mr. Harold Wilson (Labour), who had moved an Opposition amendment which (1) noted "with concern" that the Government's policies had "led to a fall in industrial production, a continuing increase in unemployment, and a failure to make full use of our industrial capacity"; and (2) regretted the omission from the Queen's Speech of "any measures directed toward the expansion of production and employment while maintaining stable prices."

Mr. Wilson asserted that there were now three unemployed persons for every unfilled job; that industrial production was four per cent "below even the stagnant level of a year ago" and only four per cent above 1954; that steel production was "running as much as 20 per cent below last year"; and that coal was "being stocked on the ground at an enormous rate because the requirements of our sluggish industrial machine are down by 8,000,000 tons this year."

After referring to what he described as the "disastrous policies" of Mr. Macmillan and Mr. Butler when they were at the Treasury, Mr. Wilson said that September 1957 marked the date "when the Government decided finally to sacrifice full employment to the fight against an inflation already passed." Comparing the Government's economic policies with the 18th-century medical practice of blood-letting, he declared: "They have carried the blood-letting so far that they have gravely weakened the patient, and are claiming credit for the fact that they have to administer a blood transfusion."

Mr. Wilson went on to accuse the Chancellor of having "dillied and dallied to the point where investment had sagged so much that he could only avoid a slump by stimulating consumption by promoting a spending spree." Action taken earlier would have maintained full employment by increased investment, but because the Chancellor had missed that opportunity he had had "to gamble on a consumption boom." If Britain were to maintain her place in the world, it was investment that should be stimulated and not consumption; moreover, Britain had to face the "inexorable and menacing rise" in industrial production in Russia, Germany, China, and Japan.

Until the past few weeks (Mr. Wilson continued) the Government had not dared to think of industrial expansion because of the fear of inflation; suddenly it had "taken the lid off." What, he asked, could be more inflationary than the banks' personal loans scheme and the relaxation of hire purchase? There was "nothing more inflationary than buying this year's goods out of next year's income." The Government's actions, Mr. Wilson asserted in conclusion, did not constitute a policy but "a combination of panic measures and political cynicism."

After further debate the Opposition's amendment was negatived on Nov. 4 by 324 votes to 255—a Government majority of 69.

Abolition of Hire Purchase Restrictions.

All remaining restrictions on hire purchase and rental agreements were lifted on Oct. 28, from which date the Board of Trade Orders controlling such transactions were revoked.

Announcing the changes on the previous day, the Board of Trade explained that "the situation, with credit conditions easier, now justifies removal of all goods from the control"; accordingly, the initial "down" payment and the period covered by hire purchase or rental agreements would in future be a matter for the trader to settle individually with his customers. The lifting of the restrictions would not, however, affect the protection accorded to hirers under the Hire Purchase Acts which governed the right to recover possession of goods.

The only period since World War II when there had been no hire purchase controls was between July 1954 and February 1955. Controls were reimposed in the latter month at the beginning of the "credit squeeze," and further restrictions were introduced in February 1956.

The final lifting of controls had been preceded a few weeks earlier by extensive relaxations announced on Sept. 15.

These earlier relaxations (*a*) completely freed from restrictions industrial plant, agricultural equipment, commercial vehicles, caravans, motor cycles, bicycles, furniture, carpets, cookers, water heaters, bathroom equipment, and pre-fabricated garages, (*b*) standardized the minimum deposit for all goods still subject to control at one-third of the full price (i.e. the same as for motor cars) instead of one-half as hitherto, although the maximum time for payment of the balance remained two years [goods affected included television and radio sets, gramophones, record players, tape recorders, vacuum cleaners, refrigerators, washing machines, sewing machines, cameras, and electric kettles]; (c) reduced the minimum rental charge payable in advance by hirers of goods which were still controlled from the equivalent of nine months to four months.

The decision to abandon hire purchase controls, and the Chancellor's announcement of increased investment in the public sector, followed the earlier removal of the "ceiling" on bank advances and successive reductions in the Bank Rate.

A. CANADA. — Saskatchewan Irrigation Scheme.

The Canadian Prime Minister, Mr. Diefenbaker, announced on July 25 that a cost-sharing agreement for the construction of a dam on the South Saskatchewan River had been signed by the Federal Minister of Agriculture (Mr. D. S. Harkness) and the Premier of Saskatchewan, Mr. T. C. Douglas.

The project involves the construction of two dams—a main one (1½ miles long, half-a-mile wide at its base, and 220 ft. high) near the town of Outlook; and a smaller dam, further south, across the Upper Qu'Appelle River. It is designed to bring water to about 500,000 acres of land (described 90 years ago as "permanently sterile and unfit for the abode of civilized man") at present devoted to dry farming, thus enabling the agricultural economy of a much larger region to be stabilized on the basis of livestock.

Mr. Diefenbaker pointed out that "irrigation possibilities represent by no means the only good to flow from the project, . . . which will make possible the production of hydro-electric power on a scale that will mean much to the industrial development of the province." Further advantages would be "the control of water levels in the Qu'Appelle valley and its lakes, as well as the formation of a completely new great lake of the South Saskatchewan river system upstream," which would provide "recreational facilities and wild life possibilities" of permanent interest and potential attraction for tourists. It was also hoped that the scheme would halt the decline of population in the area, and lead to the creation of new towns and communities.

The building of the main dam is expected to take 10 years, and the whole project—including irrigation canals and water and power distribution systems—a further 15 years, at a total estimated cost of $184,000,000. The proposed power plants are designed for an annual output of 400,000,000 k.w., of which 15 per cent will be devoted to the irrigation schemes and the remainder to industrial and domestic purposes. The Federal Government has approved a loan of $20,000,000 towards the hydro-electric power aspect of the project, and will meet most of the remaining costs.—(External Affairs Department, Ottawa)

B. FINE ARTS. — International Guggenheim Award.

It was announced in New York on Oct. 16 that the $10,000 International Guggenheim Prize had been awarded to the Spanish painter Joan Miró for his ceramic wall murals in the new Unesco headquarters in Paris (see 16492 C). Señor Miro was the second recipient of the prize, which was instituted in 1956 and is awarded by an international jury.

(New York Times) **(Prev. rep. 15257 D; 14792 B.)**

C. BELGIUM. — The Brussels Exhibition.

The first international exhibition since the end of the Second World War was held in Brussels from April 17 to Oct. 19. Forty-two countries and ten international organizations participated in the Exhibition, which was visited by about 42,000,000 people, many from foreign countries.

The participating countries (in addition to Belgium, the host country) included the United Kingdom, the United States, the Soviet Union, France, Italy, Spain, Portugal, the Netherlands, Norway, Luxemburg, Switzerland, Western Germany, Czechoslovakia, Yugoslavia, Turkey, Finland, Canada (the only British Commonwealth country represented except the U.K.), Japan, Argentina, Siam, Morocco, and the Vatican—the last-named participating in an international exhibition for the first time as a sovereign State. International organizations represented included the United Nations, the Council of Europe, the European Coal and Steel Community, and the International Red Cross. The principal countries not taking part in the Exhibition were India, China, Sweden, Denmark, Poland, and the countries of the British Commonwealth other than the United Kingdom and Canada.

The Exhibition was held on a 500-acre site to the north-west of Brussels and was divided into three main parts—a Belgian section, a Foreign section, and a City of International Co-operation consisting of eight pavilions built by the international organizations. In the Foreign section, the largest sites were occupied by the British, American, Soviet, French, German, Dutch, and Vatican pavilions, each covering several acres. The entire Exhibition was dominated by a structure known as the Atomium, symbolizing mankind in the atomic age. Representing the atomic structure of a crystal of iron magnified 150 million times, it consisted of nine steel spheres, each 60 ft. in diameter, linked to each other by tubes and in some cases by escalators, seven of the spheres contained displays illustrating the peaceful uses of atomic energy, while the two topmost spheres (340 ft. above the ground) contained restaurants. The Atomium will be retained as a permanent feature of Brussels.

Structurally, most of the pavilions were of "glass cage" design giving an effect of lightness and transparency; outstanding among these were the French, German, Yugoslav and Japanese pavilions. Of the pavilions of more conventional design, those of Italy, the Netherlands and Finland—the last-named of all-timber construction—attracted much interest. Among the smaller pavilions, one of the most successful was that of Siam—a graceful miniature temple set on a hillside.

The British Pavilion, one of the largest, covered five acres and was planned in two contrasting sections—a Hall of Tradition, illustrating British pageantry and traditions, and a Hall of Technology, illustrating British scientific and technical achievements and containing large-scale models of ZETA (the zero-energy thermonuclear reactor at Harwell), the Dounreay experimental reactor, and the Jodrell Bank radio telescope. A British Industries Pavilion exhibited high-quality British goods such as heavy and light engineering equipment, motor-cars, chinaware and pottery, textiles, plastics, etc. Other sections were devoted to the way of life of the British people (on the lines of the Lion and Unicorn Pavilion at the South Bank Exhibition), Commonwealth development, and British invention. There were also shops for the sale of British goods, and an inn—the Britannia Inn. A feature of the British Pavilion was an entrance hall consisting of three crystal-shaped towers 70 ft. high.

The American Pavilion was a vast rotunda of steel, bronze, and plastic, nearly one-fifth of a mile in circumference and covering six acres. It portrayed all aspects of American life and culture and included an air-conditioned theatre with accommodation for 1,150 people. The exhibits included displays illustrating the peaceful applications of atomic energy in the United States, and other American technological achievements.

The Soviet Pavilion similarly reflected all aspects of life and culture in the U.S.S.R., with special emphasis on Soviet achievements in the fields of science and technology. The exhibits included full-size models of the two Russian *sputniks*, as well as models of the atomic-powered icebreaker *Lenin* (the first vessel of its kind), the TU-104 jet airliner, and the world's largest proton accelerator. A feature of the displays was a geological map of the U.S.S.R. on a scale of 1 : 2,500,000—the only one of its kind in the world.

The four-storey Vatican Pavilion, designed as a *Civitas Dei* (City of God), illustrated the international role of the Roman Catholic Church in charitable works, the arts, sciences, education, and other fields. It included a church with accommodation for 2,500 people, as well as a motion-picture theatre. The cultural displays included an exhibit of paintings of Christ as seen through the eyes of the world's leading artists; canvases were contributed by many nations to form the largest collection of such paintings ever gathered under one roof.

Belgium was represented by 22 pavilions, in addition to a separate Belgian Congo section with a complete African village. The Belgian Civil Engineering Pavilion, a building of striking design, was adjudged by an international jury as one of the three best pavilions at the Exhibition—the other two being the Czechoslovak Pavilion and the British Government Pavilion.

The Brussels Exhibition was the first international exhibition since that held in New York in 1939; it was also the first of its kind to be held in Europe since the Paris Exhibition of 1937.

A. **FAROE ISLANDS.—Claim to 12-mile Territorial Limit. - Anglo-Danish Discussions.**

The intention of the Faroe Islands to demand the termination of the Anglo-Danish Fishery Convention as revised and renewed in 1954, and to seek an extension of Faroe territorial waters to 12 miles, was announced at a special session of the *Lagting* (the Faroese Parliament) on June 4.

Mr. Kristian Djurhuus, the Chief Minister of the Faroes, explained that if Iceland succeeded in establishing a 12-mile limit for her territorial waters, the result would probably be greater exploitation by foreign trawlers of Faroese fishing grounds. "This," he said, "might mean that we will be pushed so far into a corner that we must, if negotiations give no result, change our limits in the same manner as Iceland." Iceland's announcement had "so essentially changed" the conditions on which the agreement with Britain had been entered into that "it must now be presumed that the Faroe Islands are no longer bound by the agreement", the Faroe Administration had therefore notified the Danish Government that they could no longer consider themselves bound by the Convention with Britain.

Mr. Djurhuus added, however, that "the path of negotiation should be tried again in an effort to reach a solution." He suggested as possible solutions either an outright extension of the fisheries limit to 12 miles, or the protection from trawler fishing of all fishing grounds around the Faroes, "according to the principle championed by several countries, including Britain, at the recent Law of the Sea Conference at Geneva."

A formal resolution calling for the abrogation of the Anglo-Danish Fishery Convention and the extension of Faroese fishing limits to 12 miles from Sept. 1 (the date fixed by Iceland for the extension of her territorial waters) was approved by the *Lagting* on June 6. On June 8, however, Mr. H. C. Hansen, the Danish Premier and Foreign Minister, issued a statement to the effect that the question of extending fishing limits was outside the powers of the *Lagting* and could only be dealt with by the Danish Parliament. [Under the Danish Constitution the *Lagting* is responsible only for the internal government of the Faroes and not for foreign affairs.] After a visit to Copenhagen on June 15-16 by a Faroese delegation led by Mr. Djurhuus, Mr. Hansen announced on June 17 that Denmark would ask Britain to agree to the extension of the Islands' territorial waters to 12 miles. An *aide-mémoire* from the Danish Government supporting the Faroese demands and suggesting early negotiations was accordingly delivered to the British Foreign Office on June 19.

The British Government stated in its reply (July 5) that while Britain would join with Denmark in preliminary discussions, she regarded formal negotiations as "premature so long as the Icelandic fisheries dispute remains unresolved."

The British reply stressed that a unilateral declaration had "no legal effect," and that if Britain agreed to cancel the Anglo-Danish Fishing Convention this would not bind other countries. The Note therefore asked whether the Danish Government considered it desirable to hold a conference of all countries whose vessels fished off the Faroes, although pointing out that such a conference could only "reach agreement on the lines of the proposals most supported at the recent Geneva Conference on the Law of the Sea," which would give the Faroes much less than they now claimed. The British Government were particularly anxious that any agreement should provide stability and security, and it would be essential to know whether the Faroe islanders would "regard the result of a conference as an enduring settlement."

Talks began in London on Sept. 12 between a Danish delegation led by Mr. Viggo Kampmann, the Finance Minister, and a British delegation led by Mr. John Hare, the Minister of Agriculture, Fisheries and Food.

A subsequent official statement said that the representatives of the two Governments had exchanged views on "the implications for the fisheries around the Faroe Islands of the Geneva Conference on the Law of the Sea and subsequent developments," and that Mr. Kampmann had "agreed to examine certain British proposals made as a provisional solution." These proposals were stated in the British and Danish Press to comprise: (1) an extension of the fishing limits, within which Faroese vessels alone would have the right to fish, from the present three miles to 12; (2) within this 12-mile zone, recognition of a contiguous six-mile zone (i.e. the outer half of the 12-mile zone) within which foreign trawlers would be allowed to fish under a quota system.

The British proposals were considered by the Foreign Affairs Committee of the Danish *Folketing* on Sept. 17 and were approved in principle, subject to acceptance by the Faroese *Lagting*. After discussions at Thorshavn with a Danish delegation led by Mr. Kampmann, however, a special committee of the Faroese *Lagting* rejected the British proposals in their existing form on Sept. 24. The majority of the committee nevertheless agreed to Mr. Kampmann's proposal that negotiations for a satisfactory settlement with Britain should be continued, and it was decided to send three Faroese representatives to assist in further talks.

Renewed Anglo-Danish discussions accordingly opened in London on Oct. 2, the Danish-Faroe delegation being again headed by Mr. Kampmann. It was agreed that a number of technical points involved should be examined in detail by experts of both sides, and meetings of experts were accordingly held in London on Oct. 3, in Copenhagen on Oct. 9-10, and again in London on Oct. 29-30. On the latter date it was announced that the experts' conclusions would be submitted to the British and Danish Governments.—(Berlingske Tidende, Copenhagen - Politiken, Copenhagen - Lloyds List and Shipping Gazette - Times - Daily Telegraph - Manchester Guardian) **(Prev. rep. Icelandic Fisheries Dispute, 16478 A; Geneva Conference on Law of the Sea, 16411 A; Anglo-Danish Fishery Convention, 14163 D.)**

B. **SPORT. — Yachting. - The America's Cup.**

The 17th challenge contest for the America's Cup—the leading international trophy for yachting, last competed for in 1937—was held off the coast of Rhode Island, U.S.A., from Sept. 20-26. The contenders were the American yacht *Columbia*, skippered by Mr. Briggs Cunningham, and the British yacht *Sceptre*, skippered by Lieut.-Commander Graham Mann, R.N. The *Columbia* was owned by the New York Yacht Club and designed by Mr. Olin Stephens, while the *Sceptre* was owned by the Royal Yacht Squadron and designed by Mr. David Boyd. Both yachts were of the international 12-metre class, details being as follows:

	Columbia	*Sceptre*
Overall length	69 ft. 7 in.	68 ft. 10 in.
Waterline length	45 ft. 8 in.	46 ft. 6 in.
Beam	12 ft.	12 ft.
Draft	9 ft.	9 ft 1 in.
Displacement	56,900 lb.	68,000 lb.
Mast height	80 ft.	80 ft.
Sail area	1,916 sq. ft.	2,000 sq. ft.

The contest was held over a triangular course of approximately 24 nautical miles, each race being alternately windward and leeward—i.e. twice around the course. The starting and finishing point was a buoy anchored in the Atlantic Ocean nine nautical miles south-east of Brenton Reef Lightship, off Newport, R.I. The series was for the best of seven races, continuing until one yacht had won four times.

Columbia retained the trophy for the United States—which has held it uninterruptedly since 1851—by winning four of the five races held; one of the races was declared "no contest" as neither vessel had reached the finishing-point when the time-limit expired, although *Columbia* was well in the lead. Detailed results were as follows:

First race (Sept. 20)—*Columbia* completed course (i.e. twice round) in 5 hours 13 min. 56 sec., winning by 7 min. 44 sec. Wind 3-6 knots.

Second race (Sept. 22)—No contest, neither yacht completing course on expiration of time-limit; *Columbia* was leading *Sceptre* by about half-a-mile four miles from the finish. Wind 0-8 knots.

Third race (Sept. 24)—*Columbia* completed course in 3 hours 17 min. 42 sec., winning by 11 min. 42 sec. Wind 8-12 knots.

Fourth race (Sept. 25)—*Columbia* completed course in 3 hours 9 min. 7 sec., winning by 8 min. 20 sec. Wind 22-25 knots.

Fifth race (Sept. 26)—*Columbia* completed course in 3 hours 4 min. 22 sec., winning by 7 min. 5 sec. Wind 15-18 knots.

There have been 16 races for the America's Cup since it was first won by the schooner *America* in 1851 (see footnote); the United States has been successful on every occasion, British yachts having challenged 14 times and Canadian yachts twice. (Times - New York Times) **(Prev. rep. America's Cup, 1937 Contest, 2692 B.)**

Note.—The America's Cup was originally designated the Royal Yacht Squadron 100 Guinea Cup and was offered as a prize for a race round the Isle of Wight during the Squadron's regatta in 1851. Commodore J. C. Stevens, of the New York Yacht Club, entered his schooner *America* for the race and finished the 53-mile course eight minutes ahead of the nearest of his 17 rivals. The cup thus became the property of the owners of the schooner, and when the syndicate was wound up it was renamed after Commodore Stevens' vessel and given to the New York Yacht Club (in whose clubhouse it has remained ever since) as a trophy for perpetual international competition. Although the America's Cup has traditionally come to be regarded as a contest between British and American yachts, the Deed of Gift stipulated that it should be open to "competition between foreign countries"; hence there is nothing to prevent an organized yacht club in any country from challenging the United States for the trophy.

Under the terms of the original Deed of Gift, it was necessary for the challenging yacht to cross the Atlantic on her own bottom. In 1957, however, the New York Supreme Court rescinded this clause, thus enabling *Sceptre* to be shipped to the United States without having to undergo any of the strains to vessel and crew that would have been imposed by the long ocean crossing under sail.—(Times)

A. UNITED KINGDOM. — Education. - University Grants Committee's Report on University Developments, 1952-57. - Increased Government Grants to Students. - Expansion of Teachers' Training Colleges. - Creation of College of Technologists.

The University Grants Committee, under the chairmanship of Sir Keith Murray, published on Sept. 24 their report on University development over the five-year period August 1952 to July 1957.

The work of the Committee had been concerned with the allocation of increased Treasury grants in implementation of the Government's plan to increase the number of full-time University students (which in October 1957 had reached 94,600) to 124,000 by the mid-1960's, with provision for a further temporary increase of 10 per cent until 1970. In deciding upon the increased limits in grant commitments thereby involved, the Government had been guided by the Committee's recommendations resulting from discussions with each University concerned as to the part it would play.

The principal findings of the report are summarized below under cross-headings.

Increased University Entries. In consideration of the Government's expectation that two-thirds of the proposed increase in the number of students would be in the fields of science and technology, the Committee estimated—on the basis of the figures for 1955-56—that within the next ten years the number of students in faculties of pure science and technology would increase by 86 per cent to about 55,000, and of those studying the humanities and social sciences by 34 per cent to about 49,000.

The Committee examined the reasons for the continued increase in undergraduate entries at an annual rate of over 20 per cent. It concluded that while the Government's plan had taken into account the increased pressure for admission to the Universities consequent upon the post-war rise in the birth-rate, the new tendency for more pupils to remain at school until the age of 17 or over, and thereby qualify for admission to a University, had been overlooked. The anticipated "temporary" 10 per cent increase in admissions during the second half of the 1960's might therefore be expected to become permanent.

Recruitment of Academic Staff. The report found that since 1955 the increase in the numbers of academic staff had not fully kept pace with that of the numbers of students—a decrease in the proportion of Assistant Lecturers and Demonstrators being particularly noticeable. Although there had been general salary reviews in 1954 and 1957, which had taken into account the fall in the value of money and the improved salary scales of other professions and occupations, the Committee drew attention to the difficulties inherent in the application of any such general review, and recommended revised arrangements for dealing specifically with salary questions in the Universities.

Grant Commitments. The report noted that "the increase in the number of applications for admission to Universities in the past two years has been much greater than the increase in the capacity of the Universities to admit students"; thus "if still larger numbers are to be accepted without a lowering of standards, a greatly increased volume of new building will be required, as well as an increase in staffs." It was hoped that these needs would be met (1) by increasing the total grant of £10,400,000 for new buildings allocated in 1957 to £12,000,000 for each of the years 1958 and 1959, and to £15,000,000 each year from 1960-1963; (2) by progressively raising the annual grants for recurrent expenditure for the period 1957-1962 from £30,600,000 for the year 1957-1958 to £39,500,000 for 1961-1962. [The grants for recurrent expenditure would be exclusive of the additional cost of the new academic salary rates which took effect in 1957, and for which supplementary grants would be made.]

Income and Expenditure of Universities. The Committee commended the economic achievements of the Universities, which, as a result of the post-war condition of their buildings, had been faced with the necessity of greatly increased capital expenditure quite apart from that imposed by the need for expansion. During the five years 1952-1957 the Universities had themselves obtained benefactions amounting to £12,800,000, of which £3,900,000 had been set aside for buildings and equipment.

Despite the fact that the Universities had not received additional recurrent grants (apart from those covering salaries for academic staff) which would have assisted them in meeting the rise in prices, costs, and wages, a total surplus of income over expenditure of more than £1,000,000 had been achieved for the period under review.

Educational Problems. These had been examined in the light of three main considerations—(1) the increasing pressure on the limited time available for existing courses of instruction as a result of the growing content of knowledge; (2) the changed social and economic background of students; (3) the required balance between teaching and research. The following recommendations were made:

Teaching and Research. The Committee took the view that it was not practicable to extend courses of instruction "by one year," although several members had maintained that "courses were shorter than was desirable in modern conditions." In so far as the first duty of a University to a student was "to teach him how to think," teaching time might be saved without lowering of standards if some subjects were produced with less factual information and with greater emphasis on their implications.

The Committee considered that it was not possible to lay down any rule which would govern the balance between the "two activities" of teaching and research, which should be regarded "not as conflicting but as complementary." It was not thought that there was too much financially-sponsored research at the present time, though the position "needed to be watched." The report outlined the conditions in which financial responsibility for established research might be transferred from the Research Councils to the Universities, and suggested that research workers could also be trained "by using facilities outside the Universities." Research in the humanities and the social sciences had involved University libraries in increasing strain and expense, and the steps taken to improve library accommodation and facilities were detailed.

Higher Technological Education. The report explained the steps taken to develop higher technological education in the Universities, and for training in nuclear science. The Universities were urged to adopt a "liberal policy" in admitting to post-graduate study men whose scientific qualifications had been gained at "other institutions." The Committee did not, however, favour the creation of a new "technological university." It considered that the further development of the Imperial College of Science and Technology (see 14966 A), and that of colleges in advanced technology elsewhere in England and of central institutions in Scotland, "should produce the growth in the number of qualified scientists and technologists which the Scientific Manpower Committee of the Advisory Council on Scientific Policy have estimated to be required."

Faculties of Arts. The Committee had considered the problems created by the increasing number of students studying "subjects grouped together under the rather misleading title of 'arts.'" While it was true that many of these subjects had "an immediate vocational utility only for the intending teacher or scholar," many of them were also of great importance at a time when "the constant advance of science and its application creates ever more pressing social and political problems." This importance could not, however, justify a "great increase" in the number of assisted undergraduates studying these subjects. The report therefore recommended that in the case of a student seeking to study a subject which he did not intend to "apply vocationally," particular care should be taken in deciding "whether his response is likely to justify the cost of his University education."

Pre-University Education. Dealing with the criticism that the present-day high standards of University requirements for admission led to "excessive specialization" in schools—particularly in those putting forward scholarship candidates for colleges at Oxford and Cambridge—the Committee "doubted" whether the most successful of such schools had "allowed their teaching in the sixth forms to be distorted." On the other hand, syllabuses for the advanced level of the G.C.E. "had become overcrowded with factual material," and the effect of educational effort narrowed down "to obtaining 60 per cent in three subjects" was "to encourage 'cramming' and a generally unintelligent attitude towards work."

Social Background and Environment of Students. The report noted that the proportion of "assisted students" had risen from 41 per cent in 1939 to nearly 76 per cent in 1957, and that an increasing number came from families of which they were the first members to receive a University education. Because of grants and awards, more students were enabled to go to "distant Universities," with both favourable and unfavourable consequences.

The "progressive reduction" in the number of students living at home during term was to be welcomed, since there was "no satisfactory substitute for a hall of residence." On the other hand, the system of awards to include such residence tended to result in the best students being "creamed off," so that inequalities between Universities were thereby perpetuated and even increased. Recent figures had shown that nearly half the number of full-time students were in lodgings; and the Committee felt that while "a favourable environment for study" might be provided by "experienced landladies," the shortage of proper lodging accommodation resulted in some students having to "make do" with inferior quarters where domestic distractions relegated work to a "shared bedroom." Because of the changed social and economic background of the majority of students, it was no longer tenable that their "general education" and welfare should be left "to take care of itself."

Increased Grants to Students.

The Minister of Education (Mr. Geoffrey Lloyd) announced on June 6 a revised scale of maintenance and vacation grants for State scholars at Universities and students at teachers' training colleges, to become effective in the autumn. [Tuition fees are fully covered by these grants, of which over 3,000 are made each year; as regards the cost of maintenance during term-time, however, parents whose income is above a certain level are required to make a contribution—see below.] The new arrangements were expected to involve an increased expenditure of about £1,900,000.

The new scale was also recommended by the Minister to local education authorities, which make about 12,000 annual grants to students not qualifying for State awards and, in general, base their grants on the Ministry's recommendations. The changes involved are summarized below:

Parents' Contributions. The Education Act of 1944 had laid down that the parental contribution should be determined by a "means test," the nature of which had encountered increasing criticism

during recent years. Rather than seek to amend the Act and abolish the "means test," the Government had decided to revise it so as to reduce the burden on parents—particularly those of the middle-income groups—in the following ways :

(1) In calculating the parents' net income, the existing allowances deductable from the gross income would be increased and others added (e.g. for life insurance premiums and payments of mortgage interest).

(2) The net income below which no parental contribution would be required would be raised from £450 to £525 per annum

(3) The scale of parental contributions, instead of rising progressively with higher rates of income, would increase at the uniform rate of £14 for every £100 of "scale" income.

The new scale for the parental "means test" is :

Scale income £	Parents' contribution. New (£)	Old (£)
500	Nil	7

Amounts of Grants. The new scale for term-time maintenance of students is as follows :

	New rates £	Current rates £
Oxford and Cambridge :		
College, Hall or lodgings	325	283
London University .		
College or hall	280	252
Lodgings	270	243
Home	192	171
Other Universities and University Colleges :		
College or hall	255	225
Lodgings	240	212
Home	182	156

Tuition fees would continue to be paid by the Government, together with necessary travelling expenses. Vacation grants, which are awarded "where appropriate" in accordance with a student's home circumstances or pressure of work, would also be raised. At Oxford or Cambridge, the present limits of £25 - £47.10.0 would be raised to £30 - £54 ; and the existing limits of £20 - £38.10.0 which applied elsewhere would be raised to £25 - £44.

The annual grants for personal expenses made to students at training colleges for teachers, and calculated according to means, would be raised to a maximum of £75 instead of £65. Personal grants and dependants' allowances for students at colleges for technical teachers (who, generally speaking, belong to a higher age-group) would also be increased—the personal grant from £95 to £135 ; the allowance for adult dependants from £117 to £160 ; and that for the first child from £40 to £55, with allowances for subsequent children in proportion.

Mr. Lloyd announced on June 26 that a committee of 15 members would be set up under the chairmanship of Sir Colin Anderson, with the following terms of reference :

(1) To enquire into the present system of allocating awards to students ; (2) to consider the degree of financial responsibility to be shared between the State and local education authorities ; (3) to discuss the application of the parental "means test" ; (4) to consider whether University or College scholarships should continue to be supplemented by the State, and whether there should be special awards for outstanding merit ; (5) to make recommendations concerning advanced courses for students in technology, art, and music.

Expansion of Teachers' Training Colleges.

A programme for the expansion of teachers' training colleges was announced by the Minister of Education on Sept. 24. It was proposed (*a*) that the number of places in these colleges should be increased to 12,000 (i.e. by over 50 per cent) by the autumn of 1962 ; and (*b*) that, to accommodate this increase, 50 existing colleges should be extended and some new ones built at a cost of about £15,000,000.

The National Advisory Council on the Training and Supply of Teachers had previously suggested that 16,000 new places should be provided, so as to bring the total to 36,000 and enable 12,000 teachers to be trained annually on the three-year courses which the Government had decided to introduce in 1960 (see 15595 B). In a letter to the chairman of the Council (Sir Philip Morris), Mr. Lloyd said that he accepted the essential importance of introducing the three-year course, but suggested that calculations which put the required number of teachers at a figure of 16,000 were "necessarily tentative," since (*a*) estimates of the school population from 1963 onwards related to future births and were therefore "speculative" ; (*b*) there was "considerable uncertainty" about the net increase to be expected in the number of candidates for training as teachers. The Minister pointed out that it would be "a considerable time" before two present influential factors could be assessed—the "wastage" due to the high rate of resignations among women teachers (which might or might not become established as a "trend"), and the number of graduate teachers who might be produced by the University expansion programme. The addition of 12,000 places by 1962 would "bring the colleges near the point where they can reach the Council's objective."

The general secretary of the National Union of Teachers (Sir Ronald Gould) said that the expansion programme was "good as far as it goes—but it does not go far enough." He added that the "curse of overcrowded classes" in schools would be prolonged "even beyond 1968" unless the training colleges were "adequately expanded."

University Population.

The latest returns, published in July 1958, gave the number of full-time students at British Universities for the academic year 1956-1957 as just under 90,000, an increase of 4,652 on 1955-1956. London University had 19,762 full-time students ; Cambridge 8,389 , and Oxford 7,708. The overall proportion of students in the principal faculties was as follows : Arts, 43.1 per cent ; Pure Science, 22.2 per cent ; Technology, 13.9 per cent ; Medicine, 14.4 per cent.

Creation of College of Technologists.

Lord Hives, chairman of the National Council for Technological Awards, announced on Nov. 7 that special research into problems related to industrial needs would be recognized by granting membership of a newly-created College of Technologists.

The award, entitling its recipients to use after their names the letters M.C.T. (Member of the College of Technologists), would be granted to students who had "completed a substantial programme of work demanding the application of their knowledge to the solution of a problem of value to industry." This programme, lasting not less than three years, would have to be carried out jointly in industry and at a technical college.

The status of the award would be comparable to that of a University Ph.D., and would therefore rank more highly than the Council's existing award, the Diploma of Technology, which had been taken by 1,706 students in 1958 as against 960 in 1957. Advanced students who already held the Diploma of Technology, or an equivalent degree in the academic field, would be able to take the three-year course for the M.C.T., which would become the highest technological award in the country. Lord Hives emphasized, however, that whilst the M.C.T. would rank with a Ph.D. degree, there was no intent on of competing with the universities ; candidates entering for the M.C.T. would not be doing purely academic work but would maintain direct contact with industry while carrying out research and study.

Lord Hives added that the formation of the new College had been approved by the representatives of industry on the Council's governing body as a means of bringing the industrial and academic worlds still closer together.

The *Manchester Guardian* pointed out that there was "no simple parallel to the new M.C.T.", commenting in this connexion : "It differs from the doctorate of the American Institutes of Technology in that students will not be wholly engaged in academic life and must retain their association with industry. On the other hand it does not denote membership of a professional body such as the F.R.I.B.A. for architects. The nearest parallel is in the medical field, where a doctor may take his diploma in one of the royal colleges and move on to membership in the college after following a programme of study and research."

The College of Technologists will be established in London ; for the present, its administrative headquarters will be the N.C.T.A. offices at Cavendish Square, W.1. The Governors of the N C.T.A. will serve as a Court for the new college, to which technologists qualifying for the M.C.T. will elect their own representatives in due course.—(Times - Daily Telegraph - Manchester Guardian) **(Prev. rep. 15595 B ; 14966 A ; 13634 A ; 12078 B.)**

A. UNITED STATES. — Alaskan Referendum on Statehood. - Big Majority for Entry into Union.

The referendum on Alaska becoming the 49th State of the Union took place on Aug 26, virtually complete results being : "Yes"—37,509 ; "No"—7,156. The three questions put to the voters were : "(1) Shall Alaska be immediately admitted to the Union as a State ? (2) Shall the present boundaries be accepted as boundaries of the new State ? (3) Shall 103,350,000 acres of public land be transferred to the new State ?" Voting was exceptionally heavy, the franchise being exercised by all persons over the age of 19.—(New York Herald Tribune) **(Prev. rep. 16292 A.)**

B. NORWAY. — Cabinet Appointment.

The Norwegian Minister for Municipal and Labour Affairs, Hr. Ulrik Olsen, resigned on Sept. 1 for reasons of age and was succeeded by Hr. Andreas Cappelen.—(Aftenposten, Oslo) **(Prev. rep. 14872 F.)**

A. SIAM. — Military Coup by Marshal Sarit Thanarat. - Power assumed by "Revolutionary Party."

A bloodless military *coup d'état* (the second in little more than a year) was carried out on Oct. 20 by Field-Marshal Sarit Thanarat, the supreme commander of the Siamese armed forces, who assumed absolute power as leader of a military junta, the "Revolutionary Party." Marshal Sarit (59) had left Siam in January to undergo an operation in the U.S.A., and had subsequently spent three months convalescing in England before returning secretly to Bangkok by air on Oct. 19.

During the morning of Oct. 20 all the members of General Thanom Kittikachorn's Cabinet were summoned to Army headquarters, where they were ordered to tender their resignations to Marshal Sarit at noon. The Prime Minister accordingly submitted his resignation to King Phumiphon Aduldet, on the ground that he was "unable to conduct the administration in the way necessary to achieve the goals desired." After troops had been posted at strategic points in the capital, a statement by Marshal Sarit proclaiming martial law throughout the country was broadcast by Bangkok Radio. The statement said that the Revolutionary Party, consisting of Army, Navy, Air Force, and police officers and civilian officials, had taken over the government with the outgoing Cabinet's support "to meet the serious Communist threat from abroad and at home and to preserve the constitutional monarchy." A communiqué was issued later the same day announcing the dissolution of the National Assembly and the suspension of the Constitution, which the Revolutionary Party proposed to revise; it was stated, however, that there would be no press censorship.

Marshal Sarit's action was officially described as a "revolution" and not as a *coup*, because (in the words of a spokesman for the junta) "a *coup* is directed against the Government and this was against the National Assembly." General Thanom Kittikachorn was stated to be the deputy leader of the Revolutionary Party, and Lieut.-General Prapart Charusathien (the former Minister of the Interior) its director in charge of civil affairs. Committees which included a number of independent personalities were set up by the Revolutionary Party to deal with economic problems and draft a new Constitution.

All political parties were abolished on Oct. 21, and about 70 Siamese and Chinese—including members of the Assembly, politicians, journalists, trade union leaders, and businessmen—were arrested during the next few days on charges of breaking the Anti-Communism Act, which previously had been only loosely enforced. In addition, about 70 Vietnamese were reported on Oct. 25 to have been arrested in north-eastern Siam on a charge of conducting Communist propaganda among Vietnamese refugees, whilst on Nov. 3 a number of extreme right-wing journalists who had attacked Marshal Sarit were also arrested. Twelve Siamese and Chinese newspapers and periodicals were suppressed under the Government's emergency powers.

The background of the coup was described in despatches from Western press correspondents in Bangkok, those of *The Times* and the *Manchester Guardian* being summarized below:

The Bangkok Correspondent of *The Times* stated on Nov. 5: "The ostensible reasons for these drastic actions were the increase in Communist activity, the unscrupulous parliamentary manoeuvring of Nai Khuang Aphaiwongse's right-wing Democrat Party, who were trying to make political capital out of a rice scarcity in the northern provinces, and the intrigues of supporters of Marshal Pibul Songgram, the former strong man, who was sent into exile last year.... Western observers are frankly sceptical whether there was in fact a Communist plot.... The chief reason for the coup was the venality of some pro-Government National Assembly men who were constantly threatening to vote with Nai Khuang's Democrats unless placated with bribes and favours. At the same time intrigues within the military group centred around the controversial personality of General Prapart Charusathien, the ambitious Minister of the Interior. All these manoeuvrings have been brought to an end by Marshal Sarit's action."

The *Manchester Guardian* (Nov. 3) laid emphasis on the economic rather than the political background of the coup. "Neither diplomatic quarters nor political observers in Bangkok believe that even a trace of Communist danger exists in Siam," it stated. "The real reason was economic—the Government was facing bankruptcy.... During the past year foreign exchange reserves came down to the lowest they had ever been, and commercial activities declined considerably. To add to these difficulties, the U.S. aid for 1958 was cut by almost half to $24,000,000.... The present economic and financial impasse was reached more because the Chinese business community here had lost its confidence in the Government than because of governmental inefficiency. The 2,500,000 Chinese in Siam own about 50 per cent and control over 80 per cent of the country's total non-agrarian capital. A belated upsurge of nationalism among the Thais, who never passed through the phase of colonialism as did other Asian nations whose nationalism was spent fighting 'Western imperialism,' has recently been directed against the Chinese community, which has a stranglehold on Siam's economy. Harassment of Chinese business men, restrictions imposed on Chinese commercial organizations, discrimination by the Government in the issue of licences and permits, have undermined the confidence of this powerful group, which, since it controls Bangkok's open money market, has been steadily transferring dollar and sterling credit to Hong Kong and Singapore, instead of re-investing in Siam. The last Siamese Government's attitude to this community has had political repercussions also. According to a recent survey made by the Criminal Investigation Department, it was discovered that 60 per cent of the Chinese in Siam are pro-Peking, 10 per cent are pro-Taiwan, and 30 per cent are uncommitted...."

The new Government emphasized that it did not intend to modify Siam's foreign policy in any way; Mr. Pote Sarasin (secretary-general of the South-East Asia Treaty Organization) was asked to act as adviser to the Revolutionary Party, and Prince Wan Waithayakon was confirmed in his post as Siamese delegate to the U.N.—(Times - Manchester Guardian - New York Times - Le Monde, Paris) **(Prev. rep. 15988 A.)**

B. LITERATURE. — Book Selections for October.

Selected books published in Great Britain and the United States are given below:

Great Britain. Fuchs, Sir Vivian, and Hillary, Sir Edmund—"The Crossing of Antarctica." (Cassell, 30s.)

George, William—"My Brother and I." A Biography of David Lloyd George, by his Brother. (Eyre & Spottiswoode, 30s.)

Goutard, Colonel A.—"The Battle of France, 1940." Translated from the French. (Frederick Muller, 25s.)

Greene, Graham—"Our Man in Havana." A Novel. (Heinemann, 15s.)

Jenkins, Elizabeth—"Elizabeth the Great." (Victor Gollancz, 21s.)

Jenkins, Roy—"Sir Charles Dilke: A Victorian Tragedy." (Collins, 25s.)

Maclean, Fitzroy—"A Person from England, and Other Travellers to Turkestan." (Jonathan Cape, 21s.)

Magnus, Sir Philip—"Kitchener: Portrait of an Imperialist." (John Murray, 30s.)

Maugham, W. Somerset—"Points of View." Five Essays on Persons and Books. (Heinemann, 21s.)

Moorehead, Alan—"The Russian Revolution." (Collins with Hamish Hamilton, 30s.)

Mowry, George E.—"The Era of Theodore Roosevelt: 1900-1912." (Hamish Hamilton, 35s.)

Newby, Eric—"A Short Walk in the Hindu Kush." (Secker & Warburg, 25s.)

Pearson, Hesketh—"Johnson and Boswell: The Story of their Lives." (Heinemann, 21s.)

Wheeler-Bennett, John W.—"King George VI: His Life and Reign." (Macmillan, 60s.)

Young, Michael—"The Rise of the Meritocracy." (Thames and Hudson, 15s.)

United States. Berton, Pierre—"The Klondike Fever: The Life and Death of the Last Gold Rush." (Knopf, New York, $5.75)

Fenton, Charles A.—"Stephen Vincent Benét: The Life and Times of an American Man of Letters." (Yale University Press, $4.50)

(Ed. K.C.A.) **(Prev. rep. Book Selections, 16432 A.)**

C. UNESCO. — Opening of Paris Headquarters.

The new permanent headquarters of the U.N. Educational, Scientific and Cultural Organization (Unesco) were officially opened in Paris on Nov. 3. Situated on a 7½-acre site in the Place de Fontenoy, the buildings were designed by three internationally-known architects—Marcel Breuer (U.S.A.), Bernard Zehrfuss (France), and Pier Nervi (Italy). They comprise (*a*) a seven-storey Y-shaped building raised on 72 pillars and walled with glass and Travertine stone; (*b*) a smaller conference hall of trapezoidal shape, with seating accommodation for 1,000 persons; and (*c*) a Secretariat building. The Unesco headquarters enjoy extra-territorial status under an agreement between the U.N. and the French Government.

The new headquarters are embellished with works of contemporary art and sculpture, the work of ten artists of international reputation commissioned by Unesco. Pablo Picasso contributed a huge mural—his biggest painting—covering nearly 1,000 sq. ft. and mounted on 40 panels on a wall of the conference building; it has an allegorical motif and was offered by M. Picasso as a gift to Unesco. Works by other artists include two free-standing walls in ceramic tile by the Spanish artist Joan Miró, representing "Night" and "Day"; a 30-ton sculpture of a reclining female figure by the British sculptor Henry Moore, in white Travertine marble and set on a pedestal; and a Japanese garden by the Japanese-American landscape artist Isamu Noguchi, with waterfall, stream, pond and bridge.

The inaugural ceremony was attended by President Coty, Dr. Luther Evans (Director-General of Unesco), two former Directors-General (Sir Julian Huxley and Dr. Torres Bodet), the British and French Ministers of Education (Mr. Geoffrey Lloyd and M. Berthoin), Dr. Radhakrishnan (Vice-President of India), and representatives of all 81 countries in membership of Unesco.—(Le Monde, Paris) **(Prev. rep. 14560 D.)**

NOVEMBER 15—22, 1958

A. JORDAN. — King Hussein's Aircraft attacked over Syria. - Disclaimer by United Arab Republic.

An aircraft carrying King Hussein of Jordan was attacked by two U.A.R. jet fighters over Syria on Nov. 10 half-an-hour after it had left Amman for Cyprus on the first "leg" of a flight to Europe, where King Hussein was to have spent a three-weeks' holiday in Switzerland. The plane succeeded in escaping from its pursuers and returned safely to Amman with the King on board.

King Hussein and his uncle, Sherif Naser, were travelling in a machine piloted by Wing-Commander J. Dalgleish, the British instructor of the Jordanian Air Force. While flying over Syria it was attacked by two Mig's but escaped by successful evasive action. On returning to Amman King Hussein broadcast an account of the incident, declared that Jordan would take "all necessary measures to answer this act of hostility," and announced that he had cancelled his holiday.

King Hussein explained that when his plane reached the Syrian border, Wing-Cdr. Dalgleish had informed Damascus airport that it would be crossing Syrian territory and had been given permission to proceed. About 15 miles from Damascus the pilot had again notified the airport that the machine would be passing through; on this occasion, however, the airport authorities said that they had been given instructions not to allow the plane to proceed, and called upon it to land. Wing-Commander Dalgleish, suspecting "bad intentions," then decided to return to Amman, but after a little time two Mig's had appeared and "buzzed" the plane six times with the apparent intention of attacking it. Thanks to the skill of Wing-Cdr. Dalgleish, these "insane and aggressive" attacks had not succeeded, and the machine was able to re-cross the Jordanian frontier and return safely to Amman. The two Mig's had pursued it for some distance across the frontier, thereby violating Jordan's airspace, but eventually flew back to Syria.

The attack on King Hussein's plane aroused intense anger in Jordan, where the armed forces and the civil population celebrated the King's escape by large-scale demonstrations of loyalty. At an emergency session of the Jordanian Parliament on Nov. 11, the Prime Minister (Mr. Samir Rifai) gave further details of the incident and announced that a full report had been sent to the U.N. Special Representative in Jordan, Signor Spinelli, for transmission to Dr. Hammarskjöld.

Mr. Rifai disclosed that King Hussein had acted as co-pilot with Wing-Cdr. Dalgleish and that the successful evasive action had been planned and executed by both. Wing-Commander Dalgleish, by flying with great skill alternately at high and low altitudes, had prevented the Mig's from getting the King's plane in their sights, and on re-crossing the frontier the machine had escaped by flying at very low level through a valley between two high mountains, thus making it impossible for the Mig's to dive and open fire. Mr. Rifai paid high tribute to the coolness and courage displayed both by King Hussein and by Wing-Commander Dalgleish.

It was announced in Amman on Nov. 11 that the attack on King Hussein's plane was regarded as an open violation of the U.N. Charter, the Charter of the Arab League, and the Middle East "peace resolution" approved by the General Assembly, and that the Jordanian Government intended to bring the matter to the attention of the Security Council. On Nov. 17, however, King Hussein stated that the incident would not be taken to the United Nations, since such an action might "impair the good results which we achieved in co-operating with the other sister-States at the international forum."

Speaking at a press conference, King Hussein said that he preferred to regard the incident as a personal insult to himself rather than as a U.N. matter; he added that he had been amply compensated by the widespread demonstrations of loyalty from his people on his return to Amman. He expressed the hope that the U.N. would prevent any recurrence of similar incidents.

In a statement to Parliament the same day, Mr. Rifai said that the Government had decided not to proceed with the matter in response to the wish of King Hussein, who had told him: "If I forgive the enemies of Arab nationalism for the wrongs committed against my country and my people, how much more fitting it is that I should meet attempts against my person with similar forgiveness and tolerance." Mr. Rifai added that the Government were making official contacts with the U.N. Secretary-General "with a view to dealing with this matter by other means conducive to the achievements of the objectives and results which it is seeking to obtain."

An official denial that U.A.R. aircraft had tried to shoot down King Hussein's plane was issued in Cairo on Nov. 10, a similar denial being issued by the Command of the U.A.R. First Army (Syrian Region).

The Cairo statement said that an unidentified Jordanian plane had flown over Syrian territory without obtaining prior clearance; that the pilot had refused to give information about its mission and direction when asked to do so by Damascus air control; that the aircraft had been ordered to land so as to obtain flight authorization; that the pilot had refused to do so and said that he would return to Jordan; and that U.A.R. planes had been ordered to accompany the machine to the Jordanian-Syrian frontier. It added: "The Jordanian statement that U.A.R. aircraft attacked the Jordanian aircraft with the intention of shooting it down is untrue, because our aircraft were capable of forcing it to land or of shooting it down if it refused to obey the order."

Although King Hussein's impending visit to Europe had been announced in Amman some days beforehand, it appeared that the U.A.R. authorities were unaware that the King was actually on board the plane intercepted over Syria. The Amman Correspondent of *The Times* stated in this connexion: "The King's presence in the royal aircraft had not been disclosed to Damascus air control, but the Syrian authorities had known of the royal departure, which had been publicly announced. The incident could not be considered [in Amman] otherwise than as an act of aggression against Jordan in the person of its King."

The incident of Nov. 10 followed a period during which there had been a marked improvement in the relations between Jordan and the United Arab Republic, consequent on the adoption of the "peace resolution" presented in the General Assembly by all the Arab States and unanimously approved on Aug. 21 (see 16365 A). On Oct. 31 Signor Spinelli informed the Jordanian Government that the U.A.R. had agreed to lift its blockade of Jordan—imposed in July last—with immediate effect; as a result, Jordanian civil aircraft resumed flights over U.A.R. territory from Nov. 1, and Jordanian road vehicles—including oil and fuel carriers—resumed the transportation of goods from Beirut to Jordan via Syria. For several weeks beforehand there had been a virtual cessation of anti-Jordanian press and radio attacks from Cairo and Damascus.

(Times - Daily Telegraph - Manchester Guardian)

B. IRISH REPUBLIC.—Proposed Abolition of Proportional Representation. - Commission on Senate Reform.

Mr. de Valera, the *Taoiseach* (Prime Minister), announced on Sept. 8 that he was in favour of abolishing proportional representation for elections to the Dail. He expressed the view that while P.R. seemed to be attractive it had in fact worked out badly, "leading to a multiplicity of parties and unduly stressing minority and sectional differences at the expense of community interests and the common good."

The Parliamentary Secretary to the *Taoiseach* (Mr. O Briain) announced in the Dail on Oct. 29, on behalf of Mr. de Valera, that the Government had decided to submit the question of discontinuing the present electoral system of proportional representation to a national referendum. A Bill would be introduced to amend the Constitution by deleting the provisions for the election of members of the Dail by P.R., and substituting new provisions to the effect that elections should be held by "relative majority vote" (i.e. simple majority, as in Britain) in single-member constituencies. The Bill would also propose the insertion in the Constitution of a new provision for an independent commission to determine and delimit constituencies.

On the previous day the *Fianna Fail Ard-Fheis* (the party conference of the ruling Fianna Fail party) had unanimously adopted a resolution calling for the abolition of proportional representation.

Mr. de Valera, replying to the motion, described P.R. as a "dangerous system." Enumerating its weaknesses, he spoke of the "ills of coalition—fabulous and contradictory promises before elections, bargaining for Government positions afterwards, and rivalry and feuds as the term of office ended."

It had previously been announced in Dublin on May 29 that the Minister for Local Government, Mr. Blaney, had appointed a commission to examine the method of election to the Senate. It would be headed by Mr. Joseph A. McCarthy (a former judge of the Circuit Court) and would include members of the Dail and Senate, as well as people from outside politics.

The proposal for the setting-up of such a commission arose from a motion introduced by Dr. Noel Browne in December 1957 that the Senate should be abolished; Mr. de Valera promised at the time to set up a committee to consider the possibility of Senate reform, and a motion to that effect was passed by the Dail.

The Senate in its present form is designed to represent "vocational" interests, 43 of its 60 members being elected from five panels representing agriculture, industry and commerce, labour, administration, and culture and education. Another six members represent the Universities, and 11 are nominated directly by the Prime Minister. The panel members are elected by an electoral college consisting of members of the Dail and county councillors.

The Senate Electoral Law Commission held its first meeting on June 11 under Mr. McCarthy's chairmanship.

(Irish Times, Dublin)

A. DISARMAMENT. — Revised "Rapacki Plan." - Western Powers reject Original Rapacki Proposals.

The Polish Foreign Minister (M. Adam Rapacki), speaking at a press conference on Nov. 4 attended by Polish and foreign journalists, announced a number of changes in the Polish Government's earlier proposals for setting up a "de-nuclearized" zone in Central Europe—the so-called Rapacki Plan. He explained that these changes were intended to meet the objections raised against the proposals contained in his original plan and the revised proposals made on Feb. 14, 1958, and that they had been agreed to by the other Warsaw Treaty countries. M. Rapacki's statement was as follows :

"We have given repeated evidence that we are capable of taking into consideration . . . opinions differing from our own, as well as the subjective difficulties of the various circles concerned. In our memorandum of Feb. 14, 1958, we took into account several such objections, and also set out the principles of a broad system of control over the carrying-out of the obligations we proposed.

"We have recently considered other arguments and misgivings voiced in the course of the discussion. We are prepared, in agreement with our allies, to take a new step—*in our opinion, a most far-reaching* step—towards meeting the main comments and reservations put forward regarding our proposal.

"We are prepared to consider the implementation of our plan in two stages. In the first stage, a ban would be introduced on the production of nuclear weapons in the territories of Poland, Czechoslovakia, the German Democratic Republic, and the German Federal Republic. Also, an obligation would be undertaken within the proposed zone to renounce the equipment with nuclear weapons of armies which do not yet possess them. At the same time, appropriate measures of control would be introduced. This might be said to amount to 'freezing' nuclear armaments in the proposed zone.

"The implementation of the second stage would be preceded by talks on the reduction of conventional forces. This reduction would be effected simultaneously with the complete de-nuclearization of the zone, and would be accompanied by appropriate measures of control.

"This modification in the manner of introducing a de-nuclearized zone in Central Europe may not satisfy all those who have hitherto opposed our proposal, in particular those who base their political reasoning on the armaments race and the equipment of Western Germany with nuclear weapons. It would, however, meet the suggestions and conclusions resulting from the attitude of many Western politicians who have expressed their opinions on our proposal. It should also eliminate major misgivings which were primarily intended to justify a negative attitude towards the Polish proposal on the part of certain Governments; in particular, the fears—whether or not well-founded—of 'upsetting the existing military equilibrium' between the two groups in Europe, of 'weakening the defences of the West,' of 'withdrawing American forces from Europe,' and so on.

"Attempts have been made to justify all these reservations by one key argument: 'A ban on the production and possession of nuclear weapons in Central Europe would deprive NATO of the nuclear shield in face of the superiority of the Warsaw Pact forces in conventional arms.' We could never agree with this argument, if only because of our fundamental attitude to weapons of mass destruction.

"We have never been against discussions on the reduction of conventional armaments in Central Europe. On the contrary, we have always favoured such discussions and such reduction. If in the past year we have confined ourselves to a proposal narrower in scope —the proposal for the de-nuclearization of Central Europe—it has been simply because the discussion on the limitation of all armaments in this area ran into serious difficulties. Moreover, we consider the carrying-out of our proposal as a first step towards further disarmament measures in that zone.

"Therefore, since many voices have been raised asking for de-nuclearization to be linked with reduction of other armaments in Central Europe, we are prepared to consider these views favourably. We put, however, one condition : that the discussions on the two related subjects are not endlessly protracted while nuclear armaments are included in the arsenals of new armies. . . ."

Replying to questions by correspondents, M. Rapacki said that during the second stage there would be full "de-atomization" of the Central European zone—i.e. "the withdrawal of atomic weapons and corresponding installations from the armaments of those armies which possess them in this zone, and at the same time the implementation of the previously agreed reductions of the conventional armed forces of both groups in the zone." As regards the forms of control, M. Rapacki said that they wanted an "effective control of the implementation of the commitments," recalling that a wide range of control measures had been suggested in the Polish memorandum of Feb. 14; which of these means should be introduced in the first stage and which in the second were "questions to be considered during concrete talks."

In reply to further questions, M. Rapacki said that the ban on atomic armaments and installations would certainly apply to the West German Army; that Poland envisaged a conference on the plan "when an agreement is reached by the parties concerned"; and that she regarded as "the parties directly concerned" as (i) the four countries in the proposed "de-nuclearized" zone [Poland, Czechoslovakia, Eastern Germany, and Western Germany], (ii) the four Great Powers [Britain, France, the Soviet Union, and the U.S.A.], and (iii) those other countries which maintained armed forces on German territory [Belgium, Canada, and Denmark.]

In its original form the Rapacki Plan had been rejected by Britain, the U.S.A., and France, as well as by the other NATO countries and by the Defence and Armaments Commission of the Western European Union Assembly.

British Note. The British reply to Poland, published in London on May 19, expressed H.M. Government's sympathy with the Polish Government's efforts to achieve progress in disarmament and the easing of international tension, but made it clear that the plan for an atom-free zone in Central Europe as proposed by M. Rapacki was not acceptable.

The Polish proposals (the Note said) raised "wider issues to which they appear to offer no solutions." Among these was "the threat to the security of the members of NATO which might arise owing to the preponderant strength of Soviet conventional forces if the Polish Government's proposals were accepted" To maintain the security of the West European countries it would be "essential that any measures which might be taken to reduce nuclear armaments in Central Europe should be accompanied by measures to reduce the Soviet preponderance in conventional weapons in the whole of Central and Eastern Europe." The Note emphasized that "it would be necessary for all these measures to be subject to control and inspection of the most effective kind," adding that "it is also the considered opinion of H.M. Government that German reunification would not be furthered by the adoption of the plan."

It was stated, however, that H.M. Government had "in no way diminished their interest in the solution of the problems of disarmament, European security, and Germany." After referring to the Western proposals for German reunification put forward in 1955, and the Western disarmament proposals of 1957, the Note expressed the hope that "progress towards a solution of the major problems may be made at the preparatory discussions for a conference of Heads of Government, at such a conference itself, or in some other way."

The Foreign Secretary (Mr. Selwyn Lloyd) said in the House of Commons on the same day that, after careful examination of the Rapacki Plan "in consultation with their allies," H.M. Government had concluded "that the adoption of the Polish plan would have such serious military and political disadvantages for the West that it would not achieve these objects [disarmament and the reduction of international tension]."

U.S. Note. The U.S. reply, published on May 4, also recognized that "the initiative of the Polish Government stems from a desire to contribute to the attainment of a stable and durable peace," but said that upon "serious and careful consideration" the U.S. Government had concluded that the Polish proposals were "too limited in scope to reduce the danger of nuclear war or provide a dependable basis for the security of Europe." It went on :

"They [M. Rapacki's proposals] neither deal with the essential question of the continued production of nuclear weapons by the present nuclear Powers, nor take into account the fact that present scientific techniques are not adequate to detect existing nuclear weapons. The proposed plan does not affect the central sources of power capable of launching a nuclear attack, and thus its effectiveness would be dependent on the good intentions of countries outside the area. The proposals overlook the central problems of European security because they provide no method for balanced and equitable limitations of military capabilities and would perpetuate the basic cause of tension in Europe by accepting the continued division of Germany.

"An agreement limited to the exclusion of nuclear weapons from the territory indicated by the Polish Government without other types of limitation would, even if it were capable of being inspected, endanger the security of the Western European countries in view of the large and widely deployed military forces of the Soviet Union. Unless equipped with nuclear weapons, the Western forces in Germany would find themselves at a great disadvantage to the numerically greater mass of Soviet troops stationed within easy distance of Western Europe. . . ."

The U.S. Note recapitulated the earlier Western and U.S. proposals for nuclear disarmament, measures against surprise attack, general disarmament within a more limited zone in Europe, the peaceful use of outer space, and a comprehensive European security pact to be established in conjunction with the reunification of Germany. It strongly rejected the Polish assertion that "the existence of opposing military groupings in Central Europe" was "responsible for tensions in the area; maintained that this division "stems primarily from the decision of the Soviet Union not to permit Eastern European nations to participate in the European recovery plan"; and reiterated that NATO was an entirely defensive organization. In conclusion, the Note said that the Polish proposals "would not serve to advance their expressed objectives," although expressing "appreciation" of the Polish initiative in seeking a solution to these problems. Finally, the hope was expressed "that the improved relations between Poland and the United States will serve as a basis for a better understanding between our two countries on these problems, as well as on other matters."

French Note. The French Government's reply was in similar terms to that of the British Government.

Following M. Rapacki's statement of Nov. 4, Mr. Selwyn Lloyd stated in the House of Commons on Nov. 19 that while he thought that the Polish Government and its Foreign Minister were "absolutely sincere" in putting forward these proposals, "the factor which must govern our view of this matter is whether any plan for disengagement will be acceptable if it changes the balance of military security to the disadvantage of either side." He added that there had so far been no official communication from the Polish Government, but that H.M. Government were studying M. Rapacki's statement "in consultation with their allies."—(Polish Embassy Press Office, London - Times - Daily Telegraph - Manchester Guardian - New York Times - Le Monde, Paris)

A. VATICAN. — Creation of 23 Cardinals. - Mgr. Tardini appointed Papal Secretary of State.

In the first major act of his pontificate, Pope John XXIII announced on Nov. 17 his intention to hold a secret consistory on Dec. 15 at which 23 new cardinals would be created—thereby raising the membership of the Sacred College to 75 for the first time since 1586, when Pope Sixtus V fixed the number of cardinals at 70.

The names of the 23 new cardinals were announced at the same time, comprising 12 Italians and 11 non-Italians. They were as follows, by nationality :

Italian. Mgr. Giovanni Battista Montini (61), Archbishop of Milan ; Mgr. Giovanni Urbani (58), Patriarch of Venice ; Mgr. Paolo Giobbe, (78), Papal Internuncio to the Netherlands ; Mgr. Giuseppe Fietta (75), Papal Nuncio to Italy ; Mgr. Carlo Chiarlo (77), titular Archbishop of Amida and Apostolic Nuncio to Brazil ; Mgr. Amleto Giovanni Cicognani (75), Apostolic Delegate to the United States ; Mgr. Carlo Confalonieri (65), Secretary of the Sacred Congregation of Seminaries and Universities ; Mgr. Alfonso Castaldo (68), Archbishop of Naples ; Mgr. Domenico Tardini (70), Papal Secretary of State [see below] ; Mgr. Alberto di Jorio (74), General Auditor of the Apostolic Chamber ; Mgr. Francesco Bracci (79), Secretary of the Sacred Congregation of Sacramental Discipline ; Mgr. Francesco Roberti (69), Secretary of the Sacred Congregation of the Council.

[Mgr. Montini was a Pro-Secretary of State with Mgr. Tardini from 1944 to 1954, prior to his appointment as Archbishop of Milan. Mgr. Urbani, formerly Bishop of Verona, was appointed by Pope John on Nov. 12 as Patriarch of Venice, the office held by the Pope himself (then Cardinal Roncalli) prior to his election. Mgr. Amleto Cicognani is a brother of Cardinal Gaetano Cicognani—the first time for 43 years that the Sacred College has two brothers among its members. Mgr. di Jorio was Secretary of the Conclave which elected Pope John as successor to the late Pope Pius XII ; he received the Red Hat from Pope John immediately after the papal election—see page 16469, second column.]

American. Mgr. Richard James Cushing (63), Archbishop of Boston ; Mgr. John Francis O'Hara (70), Archbishop of Philadelphia.

Austrian. Mgr. Franziskus König (53), Archbishop of Vienna.

British. Mgr. William Godfrey (69), Archbishop of Westminster.

[For biography of Dr. Godfrey see 15259 A ; he will be the first British cardinal since the death of Cardinal Griffin in 1956.]

French. Mgr. André Julien (76), Dean of the Tribunal of the Sacred Rota ; Mgr. Paul-Marie Richaud (71), Archbishop of Bordeaux.

German. Mgr. Julius Döpfner (45), Bishop of Berlin.

[Mgr. Döpfner (previously Bishop of Würzburg) will be the youngest member of the Sacred College ; much of his diocese is in Communist-controlled territory.]

Mexican. Mgr. José Garibi y Rivera (69), Archbishop of Guadalajara.

Portuguese. Mgr. Fernando Cento (75), Papal Nuncio to Portugal.

Spanish. Mgr. José Maria Bueno y Monreal (54), Archbishop of Seville.

Uruguayan. Mgr. Antonio Maria Barbieri (66), Archbishop of Montevideo.

Of the 75 members of the enlarged College of Cardinals—now at full strength—28 are Italians and 47 non-Italians. By nationality, the non-Italian cardinals comprise eight Frenchmen, four Americans, four Spaniards, three Brazilians, three Germans, three Portuguese, two Argentinians, two Canadians, and one each of Armenian, Australian, Austrian, Belgian, British, Chilean, Chinese, Colombian, Cuban, Ecuadorean, Hungarian, Indian, Irish, Mexican, Polish, Syrian, Uruguayan, and Yugoslav nationality.

Mgr. Tardini—one of the new Italian cardinals—was appointed Papal Secretary of State by Pope John, thereby filling a post left vacant by Pope Pius XII during the last 14 years of his reign. He was Pro-Secretary of State under Pope Pius (from 1944 to 1954 jointly with Mgr. Montini) and was reappointed to that post by Pope John immediately after the papal election.—(Universe - Catholic Times) **(Prev. rep. Pope John XXIII, 16469 A ; College of Cardinals, 16431 A.)**

B. ALGERIA. — The "Bazooka Trial." - Sentences for Attempted Murder of General Salan.

The trial of five members of the extreme right-wing "Resistance Organization of French Algeria" accused of attempting to murder General Salan (the French C.-in-C. in Algeria) opened before the Paris military tribunal on Oct. 6. The accused—Philippe Castille, Jean Fechoz, Christian Tronci, Ange Gaffori, and Gabriel Dellamonica—were charged with firing a bazooka shell into General Salan's office in Algiers on Jan. 16, 1957, and killing a member of his staff, Commandant Rodier. Dr. René Kovacs (an Algiers doctor and former swimming champion), who was alleged to be the organizer of the plot, had broken bail two days before the trial and was believed to have fled to Spain. Several other persons had been arrested in Algiers and Paris shortly after the crime on suspicion of complicity, largely as a result of allegations made by Kovacs, but were subsequently released.

At the request of M. Tixier-Vignancour (the right-wing independent deputy), who appeared for Kovacs, the trial had twice been adjourned —in July and August—on the ground of Kovacs's illness ; the prosecutor (Colonel Cornu) alleged "delaying manœuvres" by M. Tixier-Vignancour and made a request for the re-arrest of Dr. Kovacs, which was not granted by the court.

Shortly before the trial opened, M. Tixier-Vignancour announced that he would withdraw from the case as Colonel Cornu had not retracted his allegations. Dr. Kovacs thereupon sent a letter to the court stating that as M. Tixier-Vignancour could not undertake his defence, he had "regretfully decided" not to stand his trial at present, although he had no intention of evading the court's judgment. "It is evident, moreover," the letter continued, "that in view of the prosecutor's attitude towards me and the date fixed for the trial, immediately after the referendum and on the eve of the elections, it will be easier for me to defend my actions when the atmosphere is less impassioned." After this letter had been read, the court granted Colonel Cornu's request for the issue of a warrant for Kovacs's arrest, and decided to proceed with the trial of the other five defendants in the case.

All five defendants admitted manufacturing, placing, and firing the bazooka under Kovacs's orders, and Castille (a former officer of engineers) also acknowledged that he had personally directed the operation. They claimed, however, that they had not intended to injure anyone but merely to cause a "psychological shock" in France, and that they had therefore planned their attack for a time when General Salan's office was usually empty. Colonel Basset (a member of the general's staff, who was wounded by the explosion) pointed out, however, that the time chosen was in fact one at which the building was most crowded, whilst General Salan himself stated in evidence that "under the conditions in which it took place the attack was bound to cause casualties" Evidence was also given by General Cogny (commander of the French forces in Morocco at the time of the incident) and M. Arrighi (the Radical deputy and leader of the Corsican *coup* in May) ; both of them denied allegations—previously made by Kovacs—that they had been aware of the plot and that its object had been to replace General Salan, who was considered too "soft," by General Cogny.

On Oct. 15 the court found all the five accused guilty of premeditated murder, and sentenced Castille to 10 years' hard labour, Tronci and Fechoz to six years, and Gaffori and Dellamonica to five years. Kovacs was condemned to death *in absentia* on Oct. 24.—(Le Monde, Paris - Le Figaro, Paris)

C. FISHERIES. — The Icelandic and Faroes Disputes. - British Catches in Northern Waters.

In an article on Nov. 10 by the Diplomatic Correspondent of *The Times*, dealing with the implications of the Icelandic and Faroes fisheries disputes, the following table was brought showing (*a*) the total tonnage of fish caught in 1957 by British trawlers (based on Hull, Grimsby and Fleetwood) in "distant" fishing grounds ; (*b*) the tonnage caught inside the proposed 12-mile limit ; and (*c*) its percentage of the total :

Fisheries	Tonnage caught	Percentage caught inside 12-mile limit	Tonnage caught inside 12-mile limit
Iceland	173,000	40	70,000
Barents Sea and Murman Coast	52,000	6	3,000
Norwegian Coast	37,000	10	3,500
Bear Island and Spitzbergen	85,000	7	6,000
Greenland (Cape Farewell)	9,000	85	7,400
Grand Banks (Newfoundland)	3,000	6	100
Total Distant Waters	359,000	25	90,000

As regards the "middle waters" fisheries off the Faroes, British trawlers (mainly based on Aberdeen and Grimsby) caught 46,000 tons during 1957, between 50 and 60 per cent of this tonnage being taken inside the 12-mile limit.—(Times)

(Prev. rep. Iceland, 16478 A ; Faroes, 16489 A.)

A. UNITED KINGDOM. — Banking. - Introduction of Personal Loan and Personal Cheque Account Schemes. - Further Acquisition of Hire-Purchase Interests. - Merger of Scottish Banks.

A "personal loans" scheme—well known in American banking, but a new departure in British banking—was announced by the Midland Bank on Aug. 25 and was subsequently introduced by a number of other banks.

The Midland Bank's announcement said that the new "personal loan" service (coming into effect on Sept. 1) was primarily intended for personal requirements such as house repairs, refrigerators, other household or professional equipment, and cars. No security would be required other than the integrity of the customer, which would be judged by the individual bank manager, but the amount of the loan would have to bear some relation to the purpose for which it was required. Loans would be available in multiples of £10 for sums between £50 and £500. The rate of interest would be 5 per cent payable on the whole amount of the loan over the whole period, giving an effective interest rate of approximately 9¼ per cent. The loans would be repayable by monthly instalments over 6, 12, 18, or 24 months, but the entire debt would be immediately cancelled on the death of the borrower, the bank covering this risk by insurance. Interest certificates would be issued to borrowers for income-tax purposes. It was subsequently explained that the bank would "sympathetically consider" applications for up to £1,000 in such cases as small businessmen wishing to expand their businesses, or professional people wanting to buy equipment.

Similar "personal loan" schemes were announced by the Westminster Bank and the Clydesdale & North of Scotland Bank (a subsidiary of the Midland Bank) on Aug. 26; by Barclays Bank and the District Bank on Aug. 28; by Martin's Bank and Williams Deacon's Bank on Aug. 30; by the British Linen Bank and the Royal Bank of Scotland on Sept. 2; by the Bank of Scotland on Sept. 11; and by the Co-operative Wholesale Society Bank on Sept. 15.

Most of these schemes were for loans ranging from £50 to £500, or up to £1,000 in special cases; Barclays Bank, however, announced that there would be no minimum limit to the sum borrowed and that loans would be available to any customer, whether old or new, provided the bank was satisfied that repayment was within his means. The scheme of the Co-operative Wholesale Society Bank was limited to up to £400. The first scheme to come into effect was Barclays' on Aug. 29; the Westminster Bank, the District Bank, and Martin's Bank, introduced their schemes as from Sept. 1, the Clydesdale & North of Scotland Bank from Sept. 15, and the Bank of Scotland from Oct. 1.

Of the "Big Five" clearing banks, only two stayed outside the "personal loans" scheme—Lloyds Bank and the National Provincial Bank.

Lloyds Bank stated on Aug. 28 that its branch managers had wide discretionary powers in making loans, and that these were being freely used since the relaxation of the credit restrictions. Advances were made at rates of interest conforming to normal banking terms, and these facilities were "thought to be fully adequate at present to meet the requirements of the small borrower." [The interest rate on normal overdrafts is one or two per cent above Bank Rate, and such advances are thus considerably cheaper than personal loans.] The National Provincial Bank similarly announced on Sept. 3 that it regarded the loan facilities it already offered as "adequate."

Lord Monckton, chairman of the Midland Bank, said in a press statement on Sept. 8 that the bank had already made several thousand loans under its scheme, half of them for the purchase of motor cars and most of the others to pay for home decorations and repairs, or for the purchase of domestic appliances and equipment. The average personal loan was about £170.

The introduction of personal loan schemes by the banks led to an immediate reduction in hire-purchase charges by a number of furniture stores, car manufacturers, and other firms concerned with hire-purchase transactions; some of the stores even cancelled interest-charges entirely for a limited period.

Personal Cheque Account Scheme.

In an attempt to attract people who had never previously had a bank account, the Midland Bank announced on Sept. 4 a further innovation in the form of a personal cheque account scheme, which came into effect on Sept. 9.

It was stated that the "personal cheque account" would be a new kind of low-cost service "designed specifically for people with limited use for the services of a bank"; while not giving them the facilities of a full banking service, it would enable them to use a bank simply for the deposit and withdrawal of money and for making payments by cheque against the balance in their account. No minimum balance would be required on the one hand, but no overdrafts would be allowed on the other. The cost of the new account was fixed at 6d. a cheque, no other bank charges being made. In order to open an account, people not previously known to the bank would have to give a reference, sign a card, and pay in whatever money was desired to start the account.

Banks' Acquisition of Hire-Purchase Interests.

The process of acquiring interests in hire-purchase finance companies by clearing and merchant banks [see 16321 A] continued during August and September.

Lloyds Bank (the last of the "Big Five" to announce such a transaction) stated on Aug. 14 that it had offered to buy 2,000,000 5s. Ordinary shares in Bowmaker at 29s. 6d. each. This transaction, involving the payment of £2,950,000, gave the bank an interest of about 25 per cent in Bowmaker's Ordinary capital.

Commercial Bank of Scotland. Lazard Brothers announced on Aug. 14 that they had made a bid for the entire share capital of Olds Discount Company, on behalf of the Scottish Midland Guarantee Trust (a wholly-owned subsidiary of the Commercial Bank of Scotland). The offer was for 35s. 6d. for each 5s. Ordinary share of Olds Discount, involving the payment of £9,450,000.

Both Lloyds Bank and the National Bank of Scotland (in which Lloyds Bank holds a 98 per cent interest) were specifically associated with the offer; this resulted from the merger negotiations between the Commercial Bank of Scotland and the National Bank of Scotland [see below.] On the acceptance of the bid the Commercial Bank of Scotland will own one of the largest interests in hire-purchase finance of any U.K. bank by having a controlling interest in both the Scottish Midland Guarantee Trust and Olds Discount, together with a substantial indirect interest in the Industrial Banking Corporation, recently formed by Olds Discount in partnership with Samuel Montagu & Co. and Gunness, Mahon & Co. [see 16321 A.] Lloyds Bank, in addition to their 25 per cent interest in Bowmaker, will —through the National Bank of Scotland—hold a minority interest in Scottish Midland Guarantee Trust and in Olds Discount, as well as an indirect interest in the Industrial Banking Corporation.

The Royal Bank of Scotland, Williams Deacon's, and **Glyn Mills** announced on Aug. 14 that they were acquiring a 40 per cent share in the British Wagon Company. The latter company (which has a paid-up capital of £770,000) would issue approximately £500,000 of new shares which the banks would buy at 92s. 6d. per £1 nominal, involving just over £2,000,000.

Lombard Banking Ltd. (which holds the entire share capital of Lombank) announced on Aug. 13 that it had bought Awley Finance Ltd., a subsidiary of Vactric Ltd. (the vacuum cleaner manufacturers), subject to the consent of the Capital Issues Committee. In exchange for the 600,000 £1 shares in Awley Finance, Vactric Ltd. would receive 1,050,000 new Ordinary shares of 5s. each in Lombard Banking Ltd. (market price around £1), plus a cash payment of £600,000—the total consideration thus being worth nearly £1,700,000.

The District Bank announced on Aug. 25 that, subject to the consent of the Capital Issues Committee, it would subscribe for 610,000 Ordinary shares in Astley Industrial Trust at 37s. 6d. a share, thereby acquiring one-third of the Trust's Ordinary capital.

The National Bank announced on Aug. 28 that it had bought from the Irish Insurance Company 40 per cent of the share capital of Bowmaker (Ireland) Ltd., a subsidiary of Bowmaker; the price was not disclosed. The bank's interest in Bowmaker (Ireland) was subsequently raised to 45 per cent by an increase in the issued share capital of the latter company. In another transaction, announced on Sept. 27, the National Bank acquired a 33⅓ per cent holding in the capital of St. Margaret's Trust, a hire-purchase firm established in 1936.

The National Bank is the largest bank operating in Ireland, and the only bank with an extensive branch system both in Ireland and England. As a result of the above acquisitions the bank became associated with hire-purchase companies in both countries.

The Bank of Scotland announced on Aug. 29 that, subject to contract, it had negotiated the purchase of the issued share capital of North West Securities, the wholly-owned hire-purchase subsidiary of the Braid Group (a holding company of vehicle distributors, etc.).

Merger of Scottish Banks.

After negotiations initiated in October 1957, the Commercial Bank of Scotland and the National Bank of Scotland announced on Aug. 15, 1958, that they had agreed to merge under the name of the National Commercial Bank of Scotland.

It was stated that the merger would take the form of an offer by the Commercial Bank of five of its £1 "A" shares (10s. paid) for every six £1 units of the National Bank's Consolidated Capital stock (8s. paid). It would result in the National Bank Consolidated stockholders acquiring 37.31 per cent of the new bank's share capital.

The new bank will be the largest in Scotland, with some 500 branches and sub-branches; it was suggested, however, that between 50 and 100 branches might eventually be closed for reasons of rationalization.

The combined assets of the new bank will be nearly £300,000,000, and it will hold a large interest in hire-purchase finance.—(Times - Daily Telegraph - Manchester Guardian - Financial Times - The Scotsman, Edinburgh) **(16321 A.)**

B. UNITED STATES. — Relaxation of Embargo on Trade with Soviet-bloc Countries.

In accordance with the "Cocom" decision of Aug. 14, the U.S. Government issued on Nov. 6 a revised list of goods which might not be exported to Soviet-bloc countries; over 250 items were removed from the restricted category, leaving more than 700 still under control. The total embargo on shipments to Communist China, North Korea, and North Vietnam was not affected.—(New York Times) **(Prev. rep. 16361 A.)**

A. HUNGARY. — General Elections. - Internal Developments. - U.N. Report on Execution of Imre Nagy. - Resettlement of Hungarian Refugees.

Hungary's first general elections since the uprising of 1956 took place without incident on Nov. 16, the Communist-controlled "People's Patriotic Front" presenting a single list of 338 deputies for the new Parliament—40 more than in the previous Parliament. According to figures published on Nov. 19 in Budapest, 98.4 per cent of the electorate of 6,600,686 went to the polls and 99.6 per cent of the votes were cast for the official list of candidates.

Of the 298 members of the former Parliament, the names of 133 did not figure in the single list presented to the electorate. Many "old guard" Communists—particularly those associated with the Stalinist policy of the Rakosi-Gero regime—were dropped from the official list, notable absentees including Arpad Hazi, Minister of State Planning before the 1956 uprising, and Dezsö Nemes, until recently Chief Editor of the Communist organ *Nepszabadsag*. Of the new deputies, 50 per cent were described as industrial workers, 16 per cent as agricultural workers, 24 per cent as "intellectuals," and about five per cent as private farmers.

Among non-Communist names on the single list of candidates were those of Bela Kovacs, formerly general secretary of the Smallholders' Party, and a member of Imre Nagy's revolutionary government; and Milan Ognyenovich, the leader of the Yugoslav minority in southern Hungary. M. Kovacs joined M. Nagy's Cabinet during the last few days of the uprising (in which he played no important part) and subsequently sought asylum in the U.S. Embassy. M. Ognyenovich was tried with Laszlo Rajk in 1949, sentenced to 25 years' imprisonment, and released in 1956.

Previous internal and international developments are summarized below under three main heads, relating to (1) the internal situation in Hungary during the past year; (2) U.N. reactions to the execution of Imre Nagy and General Pal Maleter (see 16231 A); and (3) the Hungarian refugee problem resulting from the mass exodus after the suppression of the 1956 uprising.

The Internal Situation.

A number of trials were known to have taken place during the year, all *in camera*; few or no details were given by the Hungarian authorities apart from the sentences imposed in the "priests' trial" and the "writers trial," which, with other internal developments, are summarized below:

The "Priests' Trial." Mgr. Egon Turcsanyi (65), formerly secretary to Cardinal Mindszenty, was sentenced on Jan. 10, 1958, to life imprisonment after a five-month trial *in camera*. He and 16 other Roman Catholic priests—described as "an important counter-revolutionary group of ecclesiastics"—were accused of "counter-revolutionary activities" during the uprising; Father Turcsanyi was specifically accused of having led an "armed band," allegedly on Cardinal Mindszenty's orders, which "plundered" the State Office for Ecclesiastical Affairs and removed secret documents. The other defendants received sentences ranging from a few months to 10 years' imprisonment.

The "Writers' Trial." Four of Hungary's leading writers—Tibor Dery (72), Gyula Hay (68), Zoltan Zelk (55) and Tibor Tardos (45)—were charged in October 1957 with "subversive activity" within the Petöfi Circle before the uprising, with transforming the Socialist Writers' Circle from a Socialist body into a "multi-party opposition group," with aiding the "counter-revolutionary" Press and radio after the uprising, and with inciting the Workers' Councils to resist the Kadar Government. After a secret trial lasting several weeks, Tibor Dery was sentenced on Nov. 13, 1957, to nine years' imprisonment, Gyula Hay to six years, Zoltan Zelk to three years, and Tibor Tardos to 18 months.

The trial of the four Hungarian writers—three of whom have received the Kossuth Prize, Hungary's leading literary award—brought strong protests from many prominent writers in the West. Three French Nobel prizewinners—François Mauriac, Albert Camus, and Roger Martin du Gard—appealed to the Kadar Government to exercise clemency, whilst 14 well-known British writers made a joint protest against the secret trial of writers "whose only crime is that they used their pens in support of the cause they believed to be just"; the signatories of this protest included Lord (Bertrand) Russell, T. S. Eliot, Somerset Maugham, Richard Church, E. M. Forster, J. B. Priestley, John Masefield, Cecil Day Lewis, and Rebecca West. A number of British Labour M.P.s, including Mr. Hugh Gaitskell, also appealed to the Kadar Government to exercise "maximum clemency" towards the four writers.

Tibor Tardos was released from prison on June 6, 1958, and Zoltan Zelk on Oct. 15, leaving Tibor Dery and Gyula Hay still under detention.

Abolition of Summary Courts. The Hungarian Government issued a decree on Nov. 3, 1957, abolishing the courts of summary jurisdiction set up after the uprising, which had passed sentences of death or imprisonment on thousands of persons accused of "counter-revolutionary activities." It was stated that the abolition of these courts had been made possible by "the progress made in re-establishing legal order and security," and that all pending cases would be transferred to the regular courts or, if the State Prosecutor recommended, to the "people's courts."

Compulsory Teaching of Russian. The Ministry of Education announced on Aug. 26, 1957, that the compulsory teaching of Russian in universities and secondary schools would be resumed in the new academic year (1957-58).

[The abolition of compulsory Russian was one of the chief demands put forward by the student organizations before and during the uprising; after the suppression of the uprising M. Kadar gave an assurance that Russian would no longer be a compulsory subject.]

Church-State Relations. Archbishop Jozsef Grosz, chairman of the Roman Catholic Bench of Bishops, was decorated by the Hungarian Government on Dec. 7, 1957, in recognition of his part in promoting understanding between the Roman Catholic Church and the State during the 18 months since the uprising. Mgr. Grosz—who was awarded the Order of the Banner of the Hungarian People's Republic—is acting head of the Roman Catholic Church in Hungary in the absence of Cardinal Mindszenty, still residing in the U.S. Legation; he was imprisoned in 1951 on a charge of conspiring against the State, and released in 1955. Later the same month (December 1957) Budapest Radio announced that 22 Church leaders of different denominations had also been decorated for "courageous behaviour and loyalty to the regime" during the "counter-revolution" of 1956.

Bishop Lajos Ordass, formerly head of the Hungarian Lutheran Church, was deposed in June 1958 as head of the Church's southern district for what was officially described as an "intransigent" attitude towards the State Office for Ecclesiastical Affairs. A vice-president of the World Council of Churches, Bishop Ordass was imprisoned for several years during the Rakosi régime.

U.N. Special Committee's Report on Execution of Imre Nagy. - Yugoslav Protest to Hungary.

The five-nation U.N. Special Committee on Hungary issued a statement on June 21 in connexion with the Hungarian Government's announcement of the execution of Imre Nagy, General Maleter, and two other leaders of the 1956 uprising. After noting that the Hungarian Government had persistently defied the General Assembly's resolutions calling upon it to "desist from repressive measures against the Hungarian people," and that the Soviet Government had similarly ignored the Assembly's resolutions calling for the withdrawal of Soviet forces from Hungary, it went on:

"The Committee noted that the statement by the Government of Hungary in which the executions were announced was imprecise and vague in many particulars. Some unanswered questions are: What were the movements of the prisoners between the time of Nagy's abduction and the time of the trials? In what country were they tried? Where did the executions take place? What was the precise form of the indictment? Under what laws and under what procedures were they tried and sentenced? These are matters on which the United Nations has every right to be fully informed.

"The Committee accordingly issues an appeal to interested Governments having at their disposal any information regarding the circumstances of the arrest, trial, and execution of Imre Nagy, Pal Maleter, and their two companions, to make such information available to the Committee.

"The Committee deplores this tragic event in which these men, symbols of the hope of a nation for freedom from foreign domination, were secretly sent to death in violation of solemn undertakings that their persons would not be harmed, and in defiance of the judgment and opinion of the United Nations. It expresses its grave concern lest the end of this repression and killing may not yet be in sight."

A further statement was issued by the U.N. Special Committee on July 16, 1958, in connexion with the execution of Imre Nagy and his companions. Supplementary to the report issued in June 1957 (see 15621 A), it laid emphasis on the fact that Nagy and his companions had been abducted and subsequently put on trial in violation of the solemn pledges given by the Hungarian Government at the time they left the Yugoslav Legation in Budapest.

The report stated: "While the arrest of General Maleter and the abduction of Mr. Nagy and his companions were undertaken by Soviet personnel, nevertheless the Hungarian Government, in announcing the subsequent trials and executions, has accepted full responsibility. Moreover . . . the record clearly shows that the action of the Hungarian Government in bringing Imre Nagy to trial was contrary to the solemn assurances which Mr. Kadar . . . had previously given, including those confirmed by letter to the Yugoslav Government."

Appended to the report was a list of 30 death sentences said to have been imposed between the first U.N. report in June 1957 and the presentation of the latest report; these were compiled either from official sources or from press reports on Hungary. In addition, it named well over 100 persons who had been sentenced to imprisonment for such offences as attempting to cross the frontier, "dealing in foreign currency," "denouncing a Communist official," or "instigation against the democratic State order."

The Committee expressed the hope that the Hungarian Government, "hearing the voice of public opinion in many countries, will cease carrying out new death sentences, bring to an end the present harsh repression, and effectively re-establish the inalienable principles of human rights."

The Hungarian delegation at the U.N. refused to transmit to Budapest a letter from the U.N. Committee requesting full information on the trials of Imre Nagy, General Maleter, and their companions ; a Hungarian Government spokesman said that no information whatever would be given to the Committee, whose investigations were described as " interference in Hungarian domestic affairs."

The Yugoslav Government sent a sharply-worded protest Note to Hungary on June 23, 1958, stating that the execution of Imre Nagy and his companions had caused " profound indignation " in Yugoslavia, and repudiating the allegations against Yugoslavia contained in the Hungarian Government's announcement of June 17 [see 16231 A].

After describing these allegations as " untrue " and " staged from beginning to end," the Yugoslav Government recalled that similar allegations had been made against Yugoslavia in the past, notably at the time of the Rajk trial ; later, " after much innocent blood had been shed," the Hungarian Government itself had admitted that these charges were invented.

The Note emphasized that the Hungarian Government had violated two solemn undertakings given while Imre Nagy and his companions were in the Yugoslav Legation in Budapest : firstly, that they would be allowed to return to their homes under safe-conduct, and secondly, that no punishment would be meted out to them. The arrest, trial, and subsequent execution of Nagy and his companions was thus a deliberate violation of the Hungarian pledges, and had dealt " a heavy blow to the relations between Hungary and Yugoslavia."

The execution of Imre Nagy led to anti-Soviet demonstrations in Copenhagen on June 17, when demonstrators smashed the windows of the Soviet Embassy ; similar demonstrations occurred on June 20 in Bonn, where Hungarian refugees threw stones at the Soviet Embassy and smashed windows, and on June 22 in New York, where refugees stoned the offices of the Soviet delegation to the United Nations. Counter-demonstrations took place in Moscow at which crowds broke the windows of the Danish and West German Embassies and demonstrated outside the U.S. Embassy.

Resettlement of Hungarian Refugees.

The Geneva Office of the U.N. High Commissioner for Refugees announced on Nov. 2, 1957, that 90 per cent of the Hungarian refugees who sought asylum in Austria and Yugoslavia had been resettled. Of the 195,000 Hungarians who fled in " the greatest single movement of refugees in Europe since the Spanish Civil War," 160,000 had been accepted by 34 nations ; about 21,000 were still in Austria and another 4,800 in Yugoslavia ; and 10,000 had been voluntarily repatriated to Hungary. It was estimated that only 4,000 Hungarian refugees would be left in Austria by the end of 1958.

From the beginning of 1957 onwards the flow of refugees from Hungary was largely directed to Yugoslavia, instead of to Austria as in the weeks immediately following the suppression of the Hungarian uprising. This influx posed serious problems for the Yugoslav Government in respect of the care and maintenance of refugees, and negotiations for their resettlement in other countries were undertaken with the U.N. High Commissioner (Dr. Lindt), the Intergovernmental Committee for European Migration (ICEM), and other bodies.

By January 1958 the refugee problem in Yugoslavia had been virtually solved and all reception camps closed down except one near Rjeka. It was announced in Geneva on Jan. 27, 1958, that of a total of 19,857 refugees who had fled to Yugoslavia, 16,374 had been resettled in 27 countries in Europe and overseas, nearly 3,000 had chosen voluntary repatriation to Hungary, and 634 had chosen to remain in Yugoslavia. Of the refugees in Yugoslavia taken by Western countries, 2,509 had been accepted by the United States, nearly as many by France, 2,376 by Belgium, between 1,000 and 2,000 by Canada, Australia, Sweden, and the German Federal Republic, and smaller numbers elsewhere.

By October 1958—i.e. two years after the Hungarian uprising—about 38,000 Hungarian refugees had been resettled in the United States, another 38,000 in Canada, about 11,000 in Britain, 10,000 in Australia, 10,000 in Brazil, and smaller numbers in France, Western Germany, Belgium, the Netherlands, Norway, Sweden, Switzerland, Turkey, Argentina, Venezuela, New Zealand, and many other countries.

Over 21,000 Hungarian refugees had entered the United Kingdom by the middle of 1957, of whom, however, many thousands emigrated to Canada and other oversea countries, while some 800 chose to be repatriated to Hungary. The Lord Mayor of London's National Hungarian and Central European Relief Fund, set up in November 1956, was closed in September 1957 after raising a total of £2,592,477 for the relief of Hungarian refugees.

Some 3,900 Hungarian refugees, many of them coalminers, were brought to Britain by the National Coal Board in the early months of 1957 as trainees for work in British pits, with the approval of the National Union of Mineworkers ; the decision as to whether or not they should be employed was left to the vote of miners in individual collieries. Assurances were given that Hungarian miners would be the first to be discharged in the event of redundancy, and both the N.C.B. and the N.U.M.W. appealed to British miners to accept Hungarian workers, particularly in view of the serious manpower shortage in the pits. With very few exceptions, however, the miners showed themselves almost unanimously opposed to Hungarian labour, and by September 1957 only 355 Hungarians had found employment in British pits.

A feature of the Hungarian emigration to Canada (see 16054 C) was the transfer to British Columbia of the entire Faculty of Forestry in the University of Sopron, including all the professors and lecturers, their dependants, and over 400 students. [Sopron is situated near the Austrian frontier and the entire faculty had escaped *en bloc* after the uprising, together with nearly all the students.] The University of British Columbia—itself noted for its work in forestry—agreed to take charge of the exiled faculty and to work out some form of affiliation with it.

It was announced in Budapest on Nov. 5 that Mrs. Julia Rajk, widow of Laszlo Rajk, had returned to Hungary from Rumania ; a supporter of Imre Nagy, she took refuge in the Yugoslav Legation after the suppression of the Hungarian revolt and was subsequently detained in Rumania with M. Nagy and his companions. A year earlier (Sept. 11, 1957) it had been announced that Miklos Szabo, one of the most prominent Hungarian refugees, had returned to Budapest and had expressed " disillusionment " with the Western Powers. M. Szabo, formerly a leading member of the Smallholders' Party, was particularly active among emigré politicians and helped to found a " Hungarian Revolutionary Council " at Strasbourg. (Times - Daily Telegraph - Manchester Guardian - New York Times - U.N. Information Centre, London - Le Monde, Paris - Neue Zürcher Zeitung) **(Prev. rep. Hungary, 15661 A ; Nagy Execution, 16321 A ; Refugees, 15221 A.)**

A. ASTRONOMY. — Volcanic Eruption on the Moon.

The Tass Agency announced on Nov. 12 that a volcanic eruption on the moon had been observed on Nov. 3 by the Russian astronomer Nikolai Kozyrev, using a 50-in. mirror telescope at the Crimea Observatory. It was stated that M. Kozyrev had noticed a reddish outline round the central peak of the 80-mile-wide Alphonsus crater in the course of three weeks' observations during which 20 photographs were taken ; this phenomenon was believed to be caused by an ejection of volcanic ash from the crater's central peak, which is 3,800 feet in height.

The announcement aroused great interest in scientific circles, since it constituted an apparent refutation of previous theories as to the origin of the craters on the moon—either that they had been caused by meteoric bombardment, or that they were the result of volcanic action millions of years ago. Professor Mikhailov, chairman of the Astronomical Council of the Soviet Academy of Sciences, claimed that M. Kozyrev's discovery had rendered " completely unfounded the existing view on the origins of characteristic features of the lunar landscape, which ascribes them to the fall of meteorites " ; he added that the volcanic eruption " shows that the moon shares similar processes with the earth, which are responsible for the formation of mountain contours."

Whilst showing great interest in M. Kozyrev's reported discovery, astronomers in Western countries adopted an attitude of reserve towards the possibility that volcanic action might still be taking place on the moon, and it was considered possible that M. Kozyrev might have misinterpreted the phenomenon observed. On Nov. 20, however, Dr. H. Percy Wilkins—a leading British astronomer, and an expert on selenography—stated that he had observed a faint but " very distinct " reddish patch, half-a-mile across, slightly to the south of the central peak of the Alphonsus crater, in the area observed by M. Kozyrev. (Times - Daily Telegraph - Observer) **(Prev. rep. 13335 D.)**

B. INDIA - SOVIET UNION. — Trade Agreement.

A five-year trade agreement between the Soviet Union and India was signed in Moscow on Nov. 16.

The agreement was concluded on a most-favoured nation basis and provided for the establishment of a clearing system under which payments will be made in Indian rupees without conversion into sterling or any other currency, so as to bring about a balanced trade without any foreign currency expenditure.

Soviet exports to India will consist of various types of equipment, including complete sets for industrial units, power and oil drilling equipment, machinery for the coal industry and for irrigation projects, machine-tools, tractors and farm machinery, fertilizers, paper, oil products, cereals, and films. Indian exports to the Soviet Union will include tea, spices, hides and skins, wool, tobacco, shellac, cashew nuts, vegetable and essential oils, and such manufactured goods as jute fabrics, leather goods, and handicrafts.

The agreement was the second of its kind between India and the U.S.S.R., the first one having been concluded on Dec. 2, 1953.—(Indian High Commissioner's Office, London - Soviet Embassy Press Department, London) **(Prev. rep. 15858 B.)**

A. UNITED KINGDOM.—Atomic Energy Authority. - Report for 1957-58. - A.E.A. Appointments. - Fleck Committees' Reports on Windscale Accident. - Closing of No. 1 and No. 2 Windscale Reactors. - Developments at A.E.A. Establishments. - Modification of "Zeta." - The Nuclear Installations Bill.

In its fourth annual report, published on July 24, the Atomic Energy Authority stated that "substantial progress" had been made during the year ending March 31, 1958, in the fields of defence commitments, research and development on the civil application of nuclear energy, and collaboration with industry and the electricity authorities. Some of the more important information contained in the report is summarized below:

Establishments. At Harwell, the thermo-nuclear assembly ZETA [see 15981 A] had started to operate on Aug. 12, 1957; PLUTO, a heavy-water moderated reactor using enriched uranium fuel and designed for the testing of materials, had begun working on Oct. 25, 1957; and NEPTUNE, a zero-energy reactor moderated by ordinary water, fuelled with enriched uranium, and intended for the special study of pressurized-water reactors for ship propulsion, had gone into operation on Nov. 7, 1957.

At Calder Hall, where a third reactor had started working on March 12, 1958, experiments in nuclear marine propulsion had been continued with a "scaled-down version" of the graphite-moderated, gas-cooled reactor, but the conclusion had been reached that this type of reactor "would not be suitable for marine propulsion, except for very large vessels." Experiments with other systems would continue to be studied in conjunction with the Admiralty, in order to determine a principle which was not only efficient but economic. A *Nautilus* type reactor would shortly be received from the U.S.A. in connexion with the development of atomic submarines [see 16298 A], but such a reactor, though efficient for its particular purpose, had not necessarily any wider application and was certainly not economic. About 400,000,000 k.w.h. of electricity had been supplied to the national grid by the Calder Hall plant after 17 months' working.

At Aldermaston, complementary research work had been carried out by the Atomic Weapons Research Establishment in connexion with the heating of heavy hydrogen by a method known as "cylindrical shock heating compression." These experiments were directly related to the development of ZETA.

The Winfrith Heath Act, authorizing the building of a new establishment at Winfrith Heath, Dorset, had been passed into law on July 31, 1957, and work on the site was now in progress. An Admiralty establishment at West Howe would be taken over to serve as an engineering unit for the project.

At Dounreay, work on the fast-breeder experimental reactor [see 14315 A] had been delayed by the diversion of effort necessitated by the Windscale accident (see below). All civil engineering work and the major mechanical construction in the reactor building had, however, been completed, and the plant was expected to be in operation early in 1959.

At Amersham, a new radio-chemical laboratory and office buildings had been opened in November 1957.

By the end of March, 1958, the construction of four nuclear power stations was under way—three for the Central Electricity Generating Board, and one for the South of Scotland Electricity Board (see below). The report stated that it was now clear that future nuclear power stations would be "of substantially greater capacity" than had been envisaged when the original programme was drawn up in February 1955 (see 14045 A). The programme would accordingly be "re-phased" to provide for a total output of 5,000-6,000 megawatts by the end of 1966. Experiments would be conducted with a gas-cooled, heavy-water moderated reactor which it was hoped could be put to commercial use in nuclear power stations before 1970.

Raw Materials. South Africa had continued to be the main supplier of uranium concentrates to the Authority. Consignments had also been received from the Belgian Congo, from Australia (Rum Jungle and Radium Hill), and, for the first time, from the ore-treatment plant at Nkana, in the Rhodesia-Nyasaland Federation. The Authority had contracted to purchase uranium concentrates from Canada to the value of about $105,000,000 between April 1, 1962, and March 31, 1963 [see 16067 B].

Purchases of beryl had risen during the year, and the Mineral Dressing Laboratory at Harwell had worked on the concentration of beryl from low-grade ores. A "modest tonnage" of beryllium (i.e. the refined metal) had been purchased from a French producer to provide fuel elements for the advanced type of gas-cooled reactor.

Isotopes and Irradiation. The total value of the sales of radio-isotopes during the year had been £650,000, as against £541,000 in the previous year—an increase of 20 per cent. The proportion of radio-isotope exports was 60 per cent.

Five 1,000 *curie* units of caesium-137 were supplied for therapeutic purposes to British hospitals, and one 1,300 *curie* unit had been ordered by a hospital in Toronto.

A.E.A. Staff and Finance. The total number of staff employed by the Authority had increased from 27,290 on April 1, 1957, to 30,341 on March 31, 1958; of these, 14,481 were non-industrial staff and 15,860 were industrial employees.

The approved Estimate of the Authority's expenditure in 1957-1958 totalled £98,769,000.

Recent developments in connexion with atomic energy research and development are summarized below under cross-headings:

A.E.A. Establishments and Reactors.

The various establishments and reactors coming under the Atomic Energy Authority are set out below, with relevant details:

A.E.A. Establishments.

The Research Centres of the Authority's three Groups are as follows:

Aldermaston (Berkshire). Atomic Weapons Research Establishment: research work includes investigation of the possibilities of adapting the principles of the hydrogen bomb to commercial use.

Harwell (Berkshire). Atomic Energy Research Establishment: research into the economic development of nuclear power, and production of radio-isotopes.

Risley (Cheshire). Research and Development Branch of the Industrial Group: work has two main objectives, (*a*) to give technological assistance to the Authority's design centres when experiments at Harwell have reached the stage of "feasibility" justifying their translation into the form of practical prototypes; (*b*) to provide the Authority's plants and factories with scientific and technical services, and to sponsor improvements necessary to efficient operation.

Note. The scientific activities at both Harwell and Risley are now controlled and co-ordinated by the Member for Scientific Research (Sir John Cockcroft). In order to make the best use of the manpower and facilities available, the responsibilities of the two organizations are sometimes reversed in practice, many projects being shared between them.

Other A.E.A. Establishments are:

* **Amersham** (Buckinghamshire): Radio-chemical centre.
† **Windscale** (Cumberland): Advanced type of reactor for plutonium production (planned for 1959).
† **Winfrith Heath** (Dorset): Thermo-nuclear research plant (under construction).
† **Woolwich Common**: Electronics Engineering Centre.
‡ **Culcheth** (Lancashire): Research and Development Laboratory.
‡ **Dounreay** (Caithness): Experimental Reactor Establishment (under construction).
Capenhurst and Springfields (Cheshire): Processing plants for the production of reactor fuels.

* Research Group. † Weapons Group. ‡ Industrial Group.

A.E.A. Reactors.

The following table gives details of the reactors operated by the Atomic Energy Authority:

Name and Purpose	Date of Start-up	Moderator	Coolant	Fuel
Harwell (Berkshire)				
GLEEP: routine testing, biological irradiations ..	1947	Graphite	Air	natural Uranium
BEPO: Isotype production, general radiation source	1948	Graphite	Air	natural Uranium
ZEPHYR: Fast reactor studies	1954	None	None	Plutonium
DIMPLE: Thermal reactor studies	1954	Heavy Water	None	(Variable)
LIDO: Thermal reactor studies	1956	Natural Water	Natural Water	Uranium-235
DIDO: Isotype production, neutron physics ..	1956	Heavy Water	Heavy Water	Uranium 235
NERO: Advanced graphite moderation research	1957	Graphite	None	enriched Uranium
PLUTO: Isotype production, reactor materials' research	1957	Heavy Water	Heavy Water	Uranium 235
*NEPTUNE: Submarine propulsion research ..	1957	Light Water	None	enriched Uranium
HAZEL: Heavy-Water moderator research ..	1958	Heavy Water	None	Uranyl-Fluoride
Aldermaston (Berkshire)				
HERALD: Radio-chemical studies, neutron physics	1958	Light Water	Light Water	Uranium 235
Dounreay (Caithness)				
(Fast Reactor). Fast reactor breeding studies..	1959	None	Sodium-Potassium alloy	enriched Uranium or Plutonium
D.M.T.R. (Pluto type) reactor materials' research	1959	Heavy Water	Heavy Water	Uranium 235
Calder Hall (Cumberland)				
†CALDER "A" and "B": Power, and plutonium production	1956 ("A") 1958 ("B")	Graphite	Carbon-Dioxide	natural Uranium
Annan (Dumfriesshire)				
†CHAPELCROSS "A" and "B": Power and plutonium	1958 ("A") 1959 ("B")	Graphite	Carbon-Dioxide	natural Uranium

* Admiralty experimental reactor. † A.E.A. nuclear power stations.

Note. Each of the four A.E.A. power stations (Calder Hall "A" and "B" and Chapelcross "A" and "B") are "two-reactor" stations. The first reactor of Calder Hall "B" started working on March 12, 1958, and the first reactor at Chapelcross "A" on Nov. 11, 1958.

A.E.A. Appointments.

Early in 1958 alterations in the structure of the Authority were set in hand with the object of relieving the full-time technical Members from executive duties, thereby enabling them to devote more time to "broad oversight" and policy formation in their particular fields. The need for such a division of responsibilities had been felt for some time.

Accordingly, on the resignation of Sir Christopher Hinton as managing director of the Industrial Group at Risley on Aug. 31, 1957 [see 15739 A], only his executive duties were assumed by his former deputy, Sir William Leonard Owen, who was appointed managing director on Sept. 1, 1957. Responsibility for the policy decisions of the Industrial Group was entrusted to Sir William Cook (who, as Mr. W. Cook, had been managing director at Aldermaston) when he was appointed Member for Engineering and Production on the Board of the A.E.A. for a five-year term on Jan. 23, 1958.

Similarly, the executive duties at Harwell of Sir John Cockcroft (Member for Scientific Research on the Board of the A.E.A.) were taken over by his deputy, Dr. F. B. J. Schonland, who was appointed managing director at Harwell on Jan. 23, 1958. Sir William Penney (Member for Weapons Research and Development) continued to act as managing director of the Weapons Research Establishment at Aldermaston, pending a new appointment to that post.

The following appointments of part-time Members for the statutory period of three years were made by the Prime Minister during the year: Sir James Chadwick (Aug. 21, 1957) *vice* Viscount Cherwell (deceased); Lord Citrine (Jan. 1, 1958) *vice* Sir Luke Fawcett, whose extended term of appointment had ended. The appointment as part-time member of Sir Ivan Stedeford, which had expired on July 31, 1957, was extended for a further two years.

Reports on Windscale Accident.

The reports of the three committees set up after the Windscale accident of 1957 (see 15904 A) under the chairmanship of Sir Alexander Fleck were published on Dec. 19, 1957 (Organizations Committee), Jan. 8, 1958 (Health and Safety Committee), and July 3, 1958 (Technical Evaluation Committee). The essential conclusions of these reports are summarized below:

Organizations Committee. After reviewing the organization and staffing of the A.E.A.'s Research and Industrial Groups, the Committee found that while the organization system was theoretically satisfactory in all respects, there were insufficient senior technical staff to ensure its fully efficient operation. The report recommended the creation of a number of senior technical posts as "an urgent need," and the Lord Privy Seal (Mr. R. A. Butler) informed the House of Commons on Jan. 24, 1958, that the chairman of the Authority (Sir Edwin Plowden) had endorsed this view. The Authority subsequently embarked upon an intensive recruitment campaign.

Health and Safety Committee. This report said that the Committee, having been "particularly conscious that the [Windscale] accident brought to the surface the latent public anxiety about the hazards of atomic energy work," had devoted a special section to this aspect of the review, although it was outside its terms of reference. It was thought that public anxiety was due to "the knowledge that exposure to radiation is not immediately recognizable by any of the senses" and to "the secrecy which has necessarily surrounded atomic energy development in its early years." The committee had been convinced, however, that the "underlying conception" of present-day safety precautions was "to aim to err on the side of caution," and that, "within the limits of existing knowledge," no chances were taken. Education in radiological problems in industry and the Public Services was nevertheless imperative, and in this connexion the following recommendations were made:

(1) The A.E.A. should "take the lead" in building up a specialized medical staff "commensurate with the future needs of the nation as a whole." (2) Government departments should ensure that training in radiological problems would be given in those Public Services and industries for which they were responsible. This would affect not only medical officers of health and their senior medical staff, but also factory inspectors, sanitary and water engineers, etc. Basic instruction should also be given to industrial nurses, health visitors, and the police. (3) Co-ordination "between the many Government departments concerned with health and safety in the atomic energy field" should be initiated by the Atomic Energy Authority. (4) A national training centre for health, physics, and nuclear safety staff (with courses graduated to suit all levels) should be established by the A.E.A., not only in the light of radiation hazards but also to determine the safety aspects of the use of isotopes in medicine, agriculture, and industry.

Within its specific terms of reference, the Committee's general conclusion was that there were no fundamental weaknesses in the A.E.A.'s health and safety organization as such, but that there was an acute shortage of the specialist staff needed for its proper operation. Throughout the Authority, "only about 90" full-time staff engaged on the control of health and safety matters had "honours degrees or equivalent qualifications," and these were, in consequence, "seriously overburdened."

It was recalled that after publication of the original Windscale report [see 15904 A] the A.E.A. had set up a committee under Sir John Cockcroft to define what "safe practice" should be, and to combine the previously separate considerations of "health" (i.e. the biological effects of radiation on human beings combined with normal industrial health matters) and "safety" (i.e. the physical measurements of radiation and the technical safety problems of reactors). This executive committee now had four sub-committees and was about to appoint a fifth—an arrangement which the report described as "correct," in view of the "new and complicated" techniques of atomic energy. Greater integration of "health" and "safety" was still required, however, as these two aspects tended to be separated in discussions "at lower levels." In factories of the Industrial Group it was recommended that health and safety sections should be "fully integrated into a single section responsible directly to the works general manager"—who should be highly qualified in both science and medicine. It was recognized that men with such dual qualifications were not easy to find, and associated research work was suggested as a "necessary and desirable stimulant" to safety staff who were specialists in either nuclear physics or medicine.

Regulations within the safety branch of the Industrial Group should provide (i) "codes of practice" for the safe design and operation of reactors, chemical plant, and laboratories; (ii) medical, radiological, and industrial safety services at each site; and (iii) an independent inspection service. Emergency procedures should be brought to a "uniformly high standard" (such as the "adequate and alert" standard at Harwell), so that maximum resources could be concentrated upon any one site in case of need. The safety organization at Risley was satisfactory in concept, but under-staffed; at Aldermaston there were as yet no full-time safety staff—a matter which demanded attention in view of the anticipated increasing scale of operations there—and it was recommended that, for the time being, "functional responsibility to the manager for all safety matters" should be encharged to members of the scientific staff on a rota basis. Greater collaboration among the Authority's three Groups was urged in dealing with the problems of "criticality" [i.e. the conditions in which a quantity of fissile material reaches the "critical mass" at which heat and fission products are produced.]

Technical Evaluation Committee. The principal finding of this Committee was that the fire in No. 1 reactor at Windscale in October 1957 had been started not by the uranium fuel, but by the surrounding blocks of graphite used as a "moderator."

The report confirmed the diagnosis, contained in the Prime Minister's memorandum of Oct. 10, 1957 (see 15904 A), that "the immediate cause of the accident was the application too soon and at too rapid a rate of secondary nuclear heating to release the Wigner energy from the graphite" (see below). The design of the uranium fuel elements had been satisfactory, but the Committee made the following criticisms:

(1) Raising the graphite temperature by nuclear means (as required to accomplish the "Wigner release") was not reliable.

(2) The existing instrumentation at Windscale for recording the temperatures of both graphite and uranium fuel was inadequate.

(3) The filters for radio-activity installed at the top of the plant's chimney-stacks had successfully collected "considerable numbers of radio-active particles" after the accident, but little of the radio-iodine gas; alteration of their design was therefore indicated.

(4) The lithium-magnesium fuel cartridges (used for the production of tritium for military purposes, and installed in the pile at the time of the accident) were of unsatisfactory design in that they were too readily oxidized by air at high temperatures such as those entailed by the "Wigner release" procedure.

After consideration of the Technical Evaluation Committee's report, the A.E.A. announced on July 15 that the No. 1 Windscale reactor would be sealed and abandoned. A similar decision to close the No. 2 reactor was made on Oct. 23. The announcement said that while it would be possible to re-start the No. 2 reactor, the necessary modifications and improvements involved by the recommendations of the Fleck Committees would cost in the region of £500,000, which would make future production of plutonium "extremely expensive," especially since the pile would have only three remaining years of useful life.

The Windscale plant had been designed for 10 years' active service and was completed in 1950 at a cost of £7,400,000; it had already served a considerable part of its purpose by producing all the plutonium required for the U.K.'s first atomic and hydrogen bombs. The closing down will not affect the future programme for plutonium production, nor will it cause any redundancy among the Windscale employees, some of whom will continue to work at the chemical processing plant (which will continue to develop) while others will be reallocated.

On Nov. 2 the A.E.A. announced that a new and advanced type of reactor would be built at Windscale in the near future, embodying carbon-dioxide cooling, the use of beryllium as a moderator, and "enriched fuel."

Note. The constant bombardment of graphite by nuclear fission results in mild distortion and accumulation of energy which must be periodically relieved by an "annealing" operation, which involves heating the graphite to a temperature above that of the atomic pile. If this is not done, the accumulated energy may be released into the reactor without warning in the form of heat—with disastrous results.

Such energy is termed "Wigner energy" after the U.S. discoverer of the phenomenon, the process of its dissipation is termed the "Wigner release."

The frequency of release is determined by the working temperature of the reactor concerned; at low temperatures (for which the Windscale plant was designed) "Wigner energy" is built up comparatively quickly to a considerable and potentially dangerous level; but the working temperature of hotter reactors (as at Calder Hall) spontaneously releases most of the energy on formation, so that the danger-point is not reached for a much longer period. The Calder Hall reactors will not become due for annealing for another two years, when they will be four years old; those at commercial power stations, which have been designed for still higher working temperatures, may never require annealing at all.

The behaviour of graphite under these conditions was not fully known when the Windscale plant was built; nor was it then appreciated that further danger lay in an air-cooling system, in which hot graphite and hot uranium oxidize violently. Subsequent reactors at Calder Hall, and at all the civil power stations, achieve cooling by the use of inert carbon dioxide. An experimental annealing operation in which particular attention was paid to the subsidiary effects of the high temperature involved (more than 300 deg. Centigrade) was carried out on the 10-year-old BEPO reactor at Harwell on March 15-16. All existing U.K. reactors employ graphite as a "moderator"; only two other known materials can perform the same function—beryllium (which can withstand higher temperatures than graphite) and heavy water, but both are more expensive and in short supply.

Developments at Other A.E.A. Establishments.

Recent developments at the Aldermaston, Calder Hall, Harwell, and Winfrith Heath establishments are summarized below:

Aldermaston. An accident occurred in the metallurgical laboratory of the Atomic Weapons Research Establishment on Dec. 11, 1957, causing the death of a senior experimental officer and injuries to five other scientists. The A.E.A. stated that the accident was caused by a chemical process and had "no radioactive significance whatever."

Calder Hall. On June 28 an explosion in a £250,000 turbine (one of four commissioned to supply electricity to the National Grid) at Calder Hall "B" atomic power station caused extensive damage but no personal injuries. A board of inquiry reported on Aug. 21 that the accident had been caused by the jamming of two valves in the turbine by fragments of chilled iron shot, causing it to overspeed and disintegrate "through sheer centrifugal force." The board made three recommendations to avert similar accidents in the future: (i) additional precautions to ensure that hard materials did not enter or remain in the system; (ii) examination of the remainder of the steam plant to ensure its freedom from the intrusion of such materials; (iii) construction of a strong wall between the turbines and the control rooms.

Harwell. PLUTO, a new reactor for testing materials and components for advanced nuclear power systems, and designed also to produce Cobalt-60 "at high activity levels for hospital and industrial use," began operations on Oct. 25, 1957. NEPTUNE, a zero-energy reactor intended to advance research on the nuclear propulsion of submarines in conjunction with civil engineering developments at Dounreay, started working on Nov. 7, 1957. The reactor was designed by Rolls-Royce Ltd. on behalf of the Admiralty; using enriched uranium as fuel and generating "only a few watts" of heat, it dispenses with a cooling system and uses ordinary water as a moderator. A further zero-energy reactor, HAZEL (Homogenous Assembly-Zero Energy) was started on March 28, 1958, using heavy water as a moderator, in which uranium curanyl fluoride was dissolved to provide an enriched fuel. The experimental operation on the BEPO reactor in connexion with the Windscale inquiry is described above.

Winfrith Heath. Mr. D. W. Fry, deputy director at Harwell, was appointed head of the new research establishment at Winfrith Heath (Dorset) on Sept. 28, 1958. Sir John Cockcroft announced at Geneva on Sept. 8 that all research on "controlled thermo-nuclear reactions" would be transferred to Winfrith between 1961-1963, and that both fission and fusion work would be developed there. The move would "also provide a margin for new work as yet unseen which will undoubtedly be developed at Harwell," and meant that ZETA II, now under preliminary design at Harwell, would be completed at Winfrith (see below).

The director of the European Nuclear Energy Agency (M. Pierre Huet) said on June 19 that the new research establishment at Winfrith Heath would be "for joint European use." Constructional costs of about £10,714,000 had been approved by a committee presided over by Sir John Cockcroft and Professor Perrin, chairman of the French Atomic Energy Commission.

Development of ZETA Reactor.

Sir John Cockcroft, in his statement of Jan. 24, 1958 on the experiments with ZETA [see 15981 A], had said that he was "90 per cent certain that thermo-nuclear fusion had taken place"; he added, however, that it was improbable that the neutrons so far observed had been the result of such fusion. Dr. B. F. J. Schonland stated on May 16 that it had since been established that such neutrons had not been caused by thermo-nuclear fission but by the "collision" of fast and slow moving deuterium atoms (deuterium being the gas inside ZETA).

Both Dr. Schonland and Dr. Peter Thonemann (leader of the ZETA team of scientists) denied, however, that their latest conclusions implied a "setback" or in any way reduced ZETA's value; they merely explained the origin of "some" of the neutrons produced "at the relatively low temperature of 5,000,000 degrees Centigrade," and provided "a new line on which to proceed." Preliminary modifications would be made to ZETA to make it possible to attain temperatures of 10,000,000 deg. Centigrade, and to prove that true thermo-nuclear reactions had been produced.

Sir Edwin Plowden disclosed on July 25 that design work had started at Harwell on ZETA II, with which it was planned to reach temperatures of 100,000,000 degrees Centigrade. [In his January statement Sir John Cockcroft had said: "If and when we reach a temperature of 25,000,000 degrees, the number of neutrons per pulse should increase at least 10,000 times. . . In order to break even, we will have to produce temperatures of about 300,000,000 degrees."] It was expected that a further modification of ZETA I would be in use early in 1959.

Sir Edwin stated that the design of ZETA II had been based, not only on the knowledge gained from its prototype, but on the results of experiments in the process of "shock heating" at Aldermaston, not previously revealed. By this latter process a current rise of 5,000,000 ampères per second had been measured for the expenditure of only 45,000 joules of energy (3,600,000 joules = 1 kilowatt-hour); with ZETA 500,000 joules had been used to induce a current of 200,000 ampères, but this current had been retained for a much longer period than was so far possible with the Aldermaston technique.

British Heavy Water Process.

A British company, Constructors John Brown Ltd. (a subsidiary of John Brown and Co. Ltd., and thereby linked with the Hawker Siddeley-John Brown Nuclear Power Co. Ltd.) announced on Aug. 21 the development of a process which would enable heavy water to be produced at a cost lower than the price of $28 per pound at present charged by the U.S. Atomic Energy Commission.

The U.S. selling price (equivalent to about £20,000 per ton, and achieved by large-scale production) had secured for the U.S.A. a virtual monopoly in world supplies of heavy water, since no other country had been able to produce its own supplies at a comparable figure—e.g. heavy water from Norway, produced by electrolysis of natural water, sells at £75,000 a ton [see 14765 A.]

Since the original conception of atomic development in the U.K. was based on reactors using graphite as a moderator, the demand for heavy water has hitherto been small. Research, however, has shown that heavy water is more efficient as a moderator and also enables power reactors to be built more compactly—an important consideration in the development of atomic marine engines and small electric-power plants. It was stated that the basic principle of the British process was not new, but that a "new route" in its application had made it economic for the first time.

Ten-Year Plan for Uranium Supplies.

The A.E.A. announced on Sept. 6 a 10-year contract plan for buying supplies of chemical concentrates containing up to 500 short tons of uranium oxide from existing or future mines in British Guiana, Kenya, Swaziland, Tanganyika, and Uganda. The contracts would date from the start of production, but the 10-year period could not be extended beyond 1972.

Plans to extend the U.K. survey to discover sources of uranium into northern and central Wales, northern England, and the southern uplands of Scotland were announced on Oct. 8 by the Department of Scientific and Industrial Research. A 1957 survey carried out in Cornwall had proved sufficiently "interesting" to warrant exploratory drilling.

Modification of Nuclear Power Stations.

The Ministry of Defence issued the following statement on June 17:

"In order to provide insurance against future defence needs, certain of the civil nuclear power reactors now in the early construction or design stage are being modified so that the plutonium produced as a by-product is suitable for use, if the need arises, for military purposes. These modifications will not delay the construction of the reactors and will not affect their normal operation as civil power stations. This decision does not affect power stations at Bradwell, Berkeley, and Hunterston [see 15531 A] where construction and installation are already well advanced. Hunterston is so designed as to be suitable for this purpose anyway."

This decision represented a reversal of previous policy, which had resulted in the U.K. being the only country in the world with a substantial programme of nuclear power stations operated solely for civil use. Under the new plan, Hunterston and Hinkley Point, together with the new stations planned for Dungeness and Sizewell (see below), will join the A.E.A.'s Calder Hall and Chapelcross, which are already dual-purpose stations capable of producing both electricity and plutonium.

The Central Electricity Generating Board applied to the Ministry of Power on May 29 for authority to develop its fifth nuclear power station (which would have an output of

500,000 - 550,000 kilowatts) at Dungeness (Kent). A similar application was made on Sept. 29 in connexion with a sixth station (with an output of 650,000 kilowatts) which it was proposed to build at Sizewell (Suffolk). Both sites were chosen with a view to securing good water-cooling facilities and the minimum interference with land used for agricultural purposes. The Sizewell station will be the biggest so far planned in the United Kingdom.

The Minister of Power (Lord Mills) announced on Aug. 1 that approval had been given for the £50,000,000 nuclear power station project at Trawsfyndd, Merioneth (see 15788 A).

As this station will be in the Snowdonia National Park, the Central Electricity Generating Board undertook to employ a landscape architect and to consult with the local planning authority and the Royal Fine Art Commission before making final decisions for the layout and design of the buildings. The site was chosen because no alternative regional site would satisfy the three essential requirements of relative isolation, adequate water-supply for cooling, and good foundations for the reactors; it was stated, however, that it would "not be regarded as a precedent for placing power stations in National Parks."

The following is a summary of the U.K. nuclear power station programme (other than A.E.A. power stations), with the planned output of each station :

Under Construction :	
England	
Berkeley (Gloucestershire)	275 megawatts
Bradwell (Essex)	300 "
Hinkley Point (Somerset)	500 "
Scotland	
Chapelcross (Dumfries-shire)	184 "
Hunterston (Ayrshire)	360 "
Proposed :	
Dungeness (Kent)	500 "
Sizewell (Suffolk)	650 "
Trawsfynydd (Merioneth)	500 "
Northern Ireland	150 "

Formation of Nuclear Chemical Plant Company.

It was announced on Aug. 29 that a new company concerned with the design and engineering of processing and treatment plant for the nuclear industry had been formed by three large engineering firms—the Power Gas Corporation, John Thompson, and Humphreys & Glisgow—under the name of the Nuclear Chemical Plant Company.

The Nuclear Installations Bill.

The Nuclear Installations (Licensing and Insurance) Bill was published as a White Paper on Oct. 30. Its main provisions were as follows :

(1) No atomic fission reactor might be constructed in the U.K. outside the jurisdiction of the A.E.A. without a licence from the Minister of Power (or, in the case of Scotland, from the Secretary of State), who would impose such conditions as he might think fit in the interests of public safety.

(2) On being licensed, the owner of any reactor would incur absolute liability for compensation " for all hurt to persons or damage to property caused by radiation arising from the site," even though the cause might have been an " unavoidable accident." Such liability would be limited to £5,000,000 for any one accident on any one site, and would be reduced in the event of a claimant being found guilty of contributory negligence.

(3) A licensed reactor owner would be required to insure against the contingency of this liability, unless he could show that his liquid assets were sufficient to cover it. In either case the cover would require the approval of the Minister of Power, with the consent of the Treasury.

(4) Any occurrence involving a liability of over £5,000,000 would be treated as a " national disaster " and referred to Parliament with a view to the allocation of Government assistance.

(5) Because certain types of injury only become apparent a long time after exposure to nuclear radiation, actions for damages could be brought at any time up to 10 years after the original incident.

(6) After an accident involving radiation, the Minister of Power would be enabled to revoke the licence of the site in question, and to give directions for preventing radio-active danger from disused plant, so long as that danger remained.

(7) Should an offence under the Bill be committed by a corporation, its directors could be punished individually, as well as the corporation as a body. In the case of more serious offences, should a corporation be fined after trial by jury the amount of the fine would be left to the discretion of the Court, and would not be subject to the limits otherwise laid down.

The Bill aimed to impose upon private and corporate owners of nuclear plants a comparable liability for compensation to that incurred by the A.E.A. as a result of the Atomic Energy Authority Act of 1954. In the case of the Authority, however, there is no limit to the amount of any claims which may be made against it, nor any form of insurance to cover such claims. It was pointed out that it was unlikely that any single claim against a private owner would approach the maximum of £5,000,000 laid down by the Bill; the damage sustained at Windscale had been evaluated at under £100,000, of which £60,000 to £70,000 concerned contaminated milk supplies. The insurance market had informed the Government of its readiness to provide the necessary cover for privately-owned nuclear plants, questions of premiums being left to the insurance companies and the owners.

The scope of the Bill includes the nuclear power plants which are the responsibility of the Central Electricity Generating Board, together with the privately-owned reactors already built or projected—of which the first is that operated by Associated Electrical Industries at Aldermaston. Its provisions will apply only to land-based fission reactors, since the development of reactors in ships, submarines, and aircraft presents problems which call for further study and legislation.—(Times - Daily Telegraph - Manchester Guardian - Atomic Energy Authority)

A. BAGHDAD PACT. — Headquarters transferred to Ankara. - Progress of Transport and Telecommunications Schemes in Baghdad Pact Region.

After a meeting of the Council of the Baghdad Pact in Ankara on Oct. 23, it was announced that " owing to the present situation " the Governments of Britain, Pakistan, Persia, Turkey, and the U.S.A. had agreed that the Baghdad Pact headquarters—including the Council, the Secretariat, and the Joint Military Planning Staff—should be temporarily set up in the Turkish capital, with retrospective effect from Oct. 17. This decision, the communiqué added, was " of an administrative nature " and had been taken " with a view to ensuring the continuation of the Pact's activities."

It was pointed out in the Press that Iraq was still an official member of the Baghdad Pact but that, in view of her possible defection, all Iraqis on the headquarters staff, including the Secretary-General, had been given indefinite leave with pay pending a clarification of the present position.

A meeting of the Economic Committee of the Baghdad Pact was held in London on July 21-24.

A communiqué issued on the latter date stated that there had been " a common determination to proceed vigorously with the committee's work " ; that the committee had " derived encouragement from the progress already achieved " ; and that all the delegations were " convinced that special emphasis should continue to be placed on the implementation of the joint projects." The following details were given on the progress of various schemes :

Telecommunications. Specifications submitted by the U.K. for the improvement and extension of radio-telegraph and radio-telephone circuits between London and the other member-countries had been approved by the Pakistani, Persian, and Turkish Governments, and tenders had been invited for the supply of the equipment. The U.K. Government had contributed £400,000 towards the cost. A team of U.S. technicians was currently engaged in a physical survey for the establishment of micro-wave links between member-countries, the U.S. Government having pledged $18,300,000 towards the cost. [A direct radio-telephone communications service between Turkey and Persia was inaugurated on Sept. 17, 1957.]

Highways. Work was in progress on linking the Persian road system from Tabriz and Teheran with the Turkish road system. For the proposed southern road linking Karachi with Persia, the U.K. had promised a contribution of £100,000 to Pakistan for the actual construction, subject to the satisfactory financing of the project as a whole; this amount was additional to the £100,000 already allocated by the U.K. for the cost of survey equipment.

Railways. A survey report on the proposed railway between Mus (Turkey) and Tabriz (Persia) had been submitted by the U.S. delegation. Part of the Persian section had already been completed, whilst Turkey was beginning the construction of her own section. To meet the cost of construction, the U.K. had agreed to allocate £100,000 each to Persia and Turkey, which would be additional to the (approximately) $2,000,000 previously allocated by the U.S.A. for rail construction in Persia.

Technical Assistance Programme. Many more experts and consultants would start work on joint projects, in addition to the surveys already made and investigations already carried out—e.g. on communications projects and agricultural pest-control problems. There had been a steady flow of students from the region for advanced training in medical and technical subjects in the U.K. Several laboratories were being equipped in the region under the programme.

The Baghdad Pact Military Committee met in Ankara on Nov. 5-7—its first meeting since the Iraqi revolution; the committee discussed plans and studies prepared by the Combined Military Planning Staff since the Council's meeting in London in July. The appointment of Lieut.-General C. P. Jones (U.K.) as Director of the Combined Military Planning Staff of the Baghdad Pact Organization was announced on Nov. 21. General Jones succeeded General Ekrem Arkalim (Turkey) and will take up his new appointment on January 1, 1959.

(Times - Daily Telegraph - New York Times - Turkish Embassy Press Department, London) **(Prev. rep. 16340 A.)**

A. UNITED KINGDOM. — Railways. - Anticipated Deficit of £85,000,000 for 1958. - Government Promises of Assistance under Transport (Railway Finances) Act.

The Minister of Transport and Civil Aviation (Mr. Harold Watkinson) announced in the House of Commons on Nov. 5 that, owing to a "precipitous fall" in British Railways' revenue during the past few months as the result of an unexpected decline in coal and steel traffic, the British Transport Commission would probably incur a deficit of about £85,000,000 in 1958. In response to an appeal by the Commission for help in meeting this deficit, the Government had agreed to advance the necessary funds under the Transport (Railway Finance) Act.

A special report to Mr. Watkinson by Sir Brian Robertson, chairman of the B.T.C., setting out the railways' position and proposing additional savings in working expenses of at least £20,000,000 a year, was published on the same day and is summarized below, together with Mr. Watkinson's reply of October 30.

Sir Brian Robertson's Report.

Sir Brian stated that in the first 36 weeks of 1958 British Railways' traffic receipts had declined by £18,000,000, as compared with the corresponding period of 1957. The greater part of this decline was accounted for by lower freight receipts, which had fallen by nearly £17,000,000 (or seven per cent), whereas passenger receipts had fallen by only £1,300,000, or 1¼ per cent. The fall in freight receipts had not been caused by the diversion of traffic to other forms of transport, but was very largely due to the reduced demand for coal and the decline in steel production and the consumption of scrap. Coal and steel traffic normally provided about 40 per cent and 20 per cent respectively of railway freight receipts, but at present revenue from the carriage of coal and minerals averaged about £600,000 a week (or over £30,000,000 a year) less than at the same time last year. The report added that the overall decline in railway receipts reflected a shrinkage of £5,000,000 in Government traffic, both passenger and freight.

In the light of present traffic trends (the report continued) the Commission could not assume that there would be any material improvement in British Railways' receipts during the remainder of 1958, whilst the net receipts from the Commission's other activities were not expected to do more than meet their share of central charges. The shortfall of British Railways' gross receipts for the year, compared with the target of £505,000,000, was therefore expected to be about £30,000,000. After adding the railways' share of central charges, the Commission's total deficit for 1958 was estimated at about £85,000,000, or over £20,000,000 more than in 1957.

"In a situation such as this," Sir Brian went on, "the financial structure of the Commission has the disadvantage compared with other businesses . . . that the fixed interest on Transport Stock which the Commission has to pay is an expense which has to be met in full each year whatever the earnings may be. There is no equity capital which can go insufficiently rewarded or unrewarded in a bad year. It has not been possible to build up a general reserve which could be used to meet such an emergency. Of the £250,000,000 of 'deficit' borrowings authorized by the Transport (Railway Finances) Act, £118,000,000 has been borrowed in respect of the years 1956 and 1957. Assuming the deficit for 1958 to be of the order of £85,000,000, the total borrowing in respect of the three years 1956-58 would amount to about £200,000,000. The Commission's total borrowing powers in respect of the deficits may, therefore, be exhausted during 1959."

The principal steps taken by the Commission to implement the economy and modernization proposals put forward in May 1958 (see 16209 A) were summarized in Sir Brian's report as follows :

Staff Reductions. British Railways staff at Aug. 31, 1958, numbered 563,000, or 17,000 (three per cent) fewer than at Aug. 31, 1957. Reductions were continuing.

Wagons. The total number of railway wagons in September, 1958, was slightly over 1,000,000, a reduction of 57,000 during the year. The process of replacing older wagons by new ones of larger capacity was continuing.

Rationalization. It was expected that 58 proposals for the withdrawal of passenger and freight services would have been submitted by the end of 1958, involving net annual savings estimated at £1,500,000. New proposals to be submitted would include some of greater size and importance, and about 35 would be considered before June 30, 1959.

Mileage. An 11 per cent saving had been made in steam-train mileage and a smaller one in electric-train mileage ; there had, however, been a 61 per cent increase in diesel-worked mileage. It was planned by the coming winter to reduce steam and electric mileage still further and to make a considerable increase in diesel mileage, resulting in a net decrease of about 88,000 miles in the weekly average.

These economies, and additional measures to be pressed forward by the Commission, were expected to result in economies of at least £20,000,000 in a full year In particular, British Railways would aim at still greater reductions in railway installations, including workshops and goods terminals. A further review would be carried out of facilities for the construction and maintenance of rolling stock, so as to secure greater concentration and co-ordination of engineering resources.

As regards revenue, the report pointed out that any general increase in passenger fares would have to be very carefully considered in the light of current conditions, but selected increases would be made wherever possible. Similarly, although an overall emergency increase in freight charges might yield temporary advantages, these might easily be succeeded by permanent disadvantages. Discussions were going on with the heavy industries to improve revenue from "certain important flows of bulk and heavy traffic," but as far as possible it was the Commission's policy to hold down freight charges so as to encourage traffic.

The report stressed that the best way of achieving reductions in expenditure and increases in traffic lay through modernization—such items as diesel traction, electrification, and continuous braking of freight trains having already produced beneficial results.

Sir Brian Robertson concluded by saying that "nothing has happened to stultify the appreciation of the future prospects of the railways as set out in 1956." The new equipment put into service had "justified the claims made for it," and although increased flexibility in charging methods [see 14316 A] had given results more slowly than expected, these were beginning to mature The severe setback in the industries on which the railways most depended had not "shaken the Commission's plans or their determination to see them carried through to success," and it was now preparing a rationalization programme for 1959, the main features of which would be presented to the Minister by the end of 1958. In the meantime Sir Brian invited the Minister to appoint auditors to "verify the critical points of our presentation of the situation."

Mr. Watkinson's Reply.

"In the Government's view," Mr. Watkinson stated, "it would be reasonable to assume that the present phase in the economy is temporary and that a future expansion of economic activity is to be expected. The addition of a possible further £25 million to the accumulated deficit is, however, an extremely serious matter, and the maximum effort will be required from all concerned with the future of the railways if it is to be put right.

"The B.T.C. restates its view that a modern railway system is essential to our industrial future. I do not dissent, although . . . it will have to be a more compact and efficient system than it is to-day. I shall look to you and your colleagues, therefore, to press forward with your plans for securing economies with the utmost determination.

"I appreciate that your 1958 financial picture is, to a large extent, due to external causes, but continued repetition would impair financial discipline and confidence in the financial future of the railways. Nor can the Government envisage an indefinite extension of the time when the Commission will break even. The Commission have, however, made substantial economies this year, and I note that it is the Commission's intention to secure in addition further savings in working expenses of at least £20 million per annum.

"The Government accept that the modernization of the railways must continue, and I am glad to see your expression of the Commission's confidence in its eventual success. The Government have considered how the immediate position should be met and have decided that the best course would be to advance the necessary funds under the Transport (Railway Finances) Act, 1957. The question of how to meet your future position can be considered in connexion with the general question of the limits on the borrowing powers of the Commission, which is bound to arise shortly in any case.

"I told you in my letter of May 5 that the Government is prepared to consider how far it might be practicable to provide for a more rapid completion of at least parts of the modernization plan The scale and pace of the different parts of the plan will now also need to be looked at in the light of your proposals for speeding up economies, as well, of course, as in relation to the scale of public investment as a whole."

Mr. Watkinson concluded by welcoming the suggestion that he should appoint auditors to "verify that the undertakings which the Commission gave earlier in the year to reduce the working costs of British Railways will have been substantially fulfilled by the end of the year, and that the main cause of the present position is a fall in coal and mineral traffic rather than any failure by the Commission to hold their share of these traffics."

The announcement of this further loan to the Commission under the Act (which authorizes borrowings of up to £250,000,000 to meet deficits—see 15438 A) brought the amount so far advanced or promised to over £200,000,000. (Times - Daily Telegraph - Manchester Guardian) **(Pref. rep. B.T.C. Report for 1957, 16326 A ; Rail Modernization Plans, 16209 A ; Transport (Railway Finances) Bill, 15438 A.)**

B. FRANCE. — Defence Appointments.

The French Government approved the following appointments in the armed forces on Sept. 18 : (*a*) Air Force General Max Gelée as French representative on the NATO Standing Group in Washington *vice* General Piatte, who became Commander of the Strategic Reserves ; (*b*) Air Force General Jouhaud as Chief of Staff of the Air Force *vice* General Gelée ; (*c*) Air Force General Maurice Challe as deputy to General Salan (the C.-in-C. in Algeria) *vice* General Jouhaud. Since the appointment of General Salan as the French Government's Delegate-General in Algeria, General Jouhaud had actually held operational command of all French forces in the territory. (Le Monde, Paris) **(Prev. rep. 16279 A, pages 16286-87 ; 16130 D.)**

A. BELGIUM. — Formation of Christian Social-Liberal Coalition Government. - All-Party Agreement on Schools Question.

The Christian Social Government headed by M. Eyskens resigned on Nov. 4 following an agreement by the Liberal and Christian Social parties laying down the conditions on which the former would join a coalition Cabinet. Although the Liberals had declined to enter into a coalition with the Christian Socials after the general elections in June, their attitude changed following the municipal elections held on Oct. 12, in which they had suffered further reverses. An agreement drafted by Christian Social and Liberal negotiators, providing for the Liberal Party's participation in the Government, was ratified by that party's National Council on Oct. 27 by 504 votes to 89, with 21 abstentions.

At the invitation of King Baudouin, M. Eyskens formed a new Government on Nov. 6 consisting of 12 Christian Socials and 7 Liberals. Its membership was as follows :

*M. Gaston Eyskens (Christian Social)	Prime Minister.
M. Albert Lilar (Liberal)	Vice-Premier.
*M. Jean Van Houtte (Christian Social)	Finance.
M. Pierre Wigny (Christian Social)	Foreign Affairs.
*M. Arthur Gilson (Christian Social)	Defence.
M. Oscar Behogne (Christian Social)	Labour.
M. L. Merchiers (Liberal)	Justice.
M. René Lefebvre (Liberal)	Interior.
M. Jacques Offelen (Liberal)	Foreign Trade.
M. J. Vanderschueren (Liberal)	Economic Affairs.
M. Léon Servais (Christian Social)	Social Security.
*M. Paul Seghers (Christian Social)	Communications.
M. Charles Moureaux (Liberal)	Education.
*Baron Albert de Vleeschauwer (Christian Social)	Agriculture.
M. Marcel Van Hemelryck (Christian Social)	Congo and Ruanda-Urundi.
M. Omer Van Audenhoven (Liberal)	Public Works and Reconstruction.
M. Paul Meyers (Christian Social)	Health.
M. Paul Van den Boeynants (Christian Social)	Middle Classes.
M. Pierre Harmel (Christian Social)	Cultural Affairs.

* Held same portfolio in previous Cabinet.

The appointment of a Liberal as Minister of Education was one of the conditions of the coalition agreement. M. Harmel was Minister of Justice and M. Servais Minister of Labour in the previous Government.

A still more important political development occurred on Nov. 6, when a National Committee representing the three main political parties (Christian Socials, Liberals, and Socialists) approved the text of a final settlement of the Belgian schools question; this committee had been set up on Aug. 8 to seek a solution to the question—hitherto one of the most intractable facing successive governments. This problem, in which the supporters of the official schools and those of the "free" schools (which are mainly Roman Catholic) had been strongly opposed to each other, was one of the principal causes of disagreement between the Christian Socials on the one hand and the Socialists and Liberals on the other for over 10 years. Whereas the Christian Socials had advocated greatly increased subsidies to the free schools, the Socialists and Liberals had insisted on priority for the development of State, provincial, and municipal schools, maintaining that education was pre-eminently the responsibility of the State and that expansion of official education had been neglected.

The inter-party agreement (which will be valid for 12 years) laid down that all parents should be free to choose whatever school they preferred for their children, and that tuition fees for secondary education should be completely abolished both in official and "free" schools. The general school-leaving age (at present 14) would be raised, and special scholarships would be awarded to suitable pupils to enable them to continue their studies until they could enter a university. All teachers, whether employed in State, provincial or municipal schools or at "free" schools, would enjoy the same status and receive the same pay.

To make good the shortage of State schools, a special fund of 1,700,000,000 Belgian francs (about £12,000,000) would be set aside at the National Bank for building 20 new secondary schools, 16 boarding schools, and 30 primary schools; another special fund of 600,000,000 fr. (about £4,300,000) would be used for building additional municipal and provincial schools. To provide for the equipment of the State schools, an amount of 200 000,000 fr. (about £1,400,000) would be appropriated annually for four years, whilst the cost of equipping municipal and provincial schools would be met by a State subsidy to the extent of 60 per cent. As regards "free" schools, the State would not subsidize the building of any new ones but would compensate all "free" schools for the loss suffered by the abolition of fees, and at the same time it would increase the subsidy for teachers' salaries; these measures would raise State payments to the "free" schools by 2,400,000,000 fr. (about £17,000,000). All political activities and propaganda in schools, as well as unfair competition between different types of schools, would be strictly forbidden.

When Parliament reassembled for its winter session on Nov. 11, Baron Paul Kronacker (a former Liberal Minister) was elected President of the Chamber of Representatives in succession to M. Camille Huysman, the veteran Socialist leader. In accordance with the coalition agreement, M. Struye (Christian Social) remained President of the Senate.—(La Nation Belge - Le Monde, Paris) **(Prev. rep. Cabinet, 16316 A.)**

B. ISRAEL. — Creation of National Land Authority. - Jewish National Fund becomes Sole Agency for Land Development in Israel.

The Smaller Zionist General Council (an organ of the World Zionist Organization), meeting in Jerusalem on Oct. 15, ratified an agreement between the Jewish National Fund (*Keren Kayemeth Le-Israel*) and the Israeli Government providing for the setting-up of a National Land Authority to take over the administration of both State and Jewish National Fund land holdings, representing together more than 90 per cent of the entire area of Israel.

For over 50 years the Fund had been engaged in buying and ameliorating land for agricultural settlement, all such land becoming the inalienable property of the Jewish people. Under the agreement with the Fund, the Israeli Government undertook to introduce in the *Knesset* a Basic Law on national land enshrining the principle that such land might never be sold but only leased to settlers, factories, public institutions, etc. It was laid down that both the Government and the Jewish National Fund would retain the ownership of their respective land holdings within the framework of this new arrangement.

Land reclamation and afforestation of both Fund and State lands will henceforth be concentrated in the hands of a Land Development Authority within the framework of the Jewish National Fund, which will become the sole agency in Israel dealing with land development. The Fund—an autonomous body of the World Zionist Organization—will continue its activities amongst Jews in Israel and foreign countries in the fields of information, education, and fund-raising.

(Israel Government Information Office, Jerusalem)

C. NETHERLANDS. — Satellite Town for The Hague.

A project for building a satellite town near The Hague to accommodate 100,000 people was approved by the Netherlands Government at the beginning of November. The new town—Wilsveen—will eventually become an independent municipality, but in the early stages its administration will be the joint responsibility of the five towns forming The Hague conurbation —The Hague itself, Rijswijk, Voorburg, Leidschedam, and Wassenaar. The Netherlands News Agency explained that whilst The Hague was constantly growing, it was "impossible to find space for more than another 60,000 people, whereas space for another 200,000 will be needed in the near future"; the Wilsveen project was thus designed to house much of the "overspill" from The Hague. (Netherlands News Agency)

D. SPEED RECORDS. — New World Water-Speed Record set up by Mr. Donald Campbell.

Mr. Donald Campbell set up a new world water-speed record on Nov. 10, when his jet-engined speedboat *Bluebird* made two runs of 243.41 and 253.84 m.p.h. respectively on Coniston Water, Lake District—an average speed of 248.62 m.p.h., or nearly ten miles an hour faster than his previous record set up on the same lake a year earlier. Mr. Campbell thereby achieved his fifth world water-speed record for Britain in *Bluebird*, viz. : 202 m.p.h. on Ullswater in 1955, 216 m.p.h. at Lake Mead (U.S.A.) in 1956, and 225, 239.07, and 248.62 m.p.h. on Coniston Water in 1956, 1957 and 1958 respectively.

E. MOROCCO. — Diplomatic Relations with China. - Sino-Moroccan Trade Agreement.

It was announced in Rabat and Peking on Nov. 1 that Morocco and the People's Republic of China had decided to establish diplomatic relations at ambassadorial level. A trade agreement between the two countries had previously been signed in Rabat on Oct. 27 ; valid for one year, it provided for commercial exchanges worth 5,000,000,000 fr. on either side, and envisaged Moroccan exports of phosphates and superphosphates as well as trucks manufactured at the Casablanca assembly plant of the French Berliet works.—(Le Monde, Paris) **(Prev. rep. 16383 D; 16165 C.)**

NOVEMBER 22—29, 1958

A. GERMANY. — Continued East-West Dispute over Reunification. - The Berlin Crisis. - M. Khrushchev's Statement. - Western and German Reactions. - Soviet Proposal for "Free City" of West Berlin.

An international crisis over the status of West Berlin and the occupation rights of the Western Powers in that city arose during November, following M. Khrushchev's announcement that the U.S.S.R. intended to transfer all its functions and responsibilities connected with the City of Berlin to the East German Government, and his suggestion that the Western Powers should do the same. The stages in this crisis—the third international crisis during 1958, following those in the Middle East and the Far East—are summarized below, together with earlier developments concerning the question of German reunification.

Bundestag Resolution on Reunification.

The *Bundestag* unanimously passed on July 2 an all-party resolution calling for the appointment by the U.S.A., the Soviet Union, Great Britain, and France of a four-Power working group to prepare joint proposals for the solution of the German question. The resolution was worded as follows :

"To further German reunification, the Federal Government is asked to bring its influence to bear on the U.S.A., the U.S.S.R., Great Britain, and France to appoint, either at a future "Summit" conference or independently, a four-Power group, with at least ambassadorial rank, to work out joint proposals for a solution of the German question."

The group proposed in the resolution would differ from that set up by the Western Allies in February 1957 in that it would be at a higher level, and would exclude Western Germany but include the Soviet Union. The resolution was based on a suggestion made by the Austrian Federal Chancellor (Dr. Raab), who had disclosed at a press conference on April 25 that he had proposed to the U.S. and Soviet Ambassadors the creation, at a "Summit" conference, of a four-Power commission charged with examining the conditions for all-German elections and drawing up a draft electoral law.

It was not until Sept. 9 that the Federal Government sent Notes to the U.S.A., the Soviet Union, Britain, and France suggesting the creation of a four-Power commission in accordance with the *Bundestag* resolution. It was explained in Bonn that the delay had been due to the Middle East crisis.

East German and Soviet Notes on Reunification.

The East German Government issued a declaration on Sept. 5, and at the same time sent Notes to Britain, the U.S.A., France, the Soviet Union, and the German Federal Government, proposing (1) the setting-up by the four Powers of a commission to start work on the terms of a peace treaty with Germany ; (2) the establishment by Eastern and Western Germany of a second commission which would be charged with working out a common German attitude on this question.

After denouncing the "aggressive forces in Western Germany and in the U.S.A." and their "attempt to press ahead with the policy of strength and solve the German problem by warlike means," the declaration said that the integration of the Federal Republic in NATO and the "efforts being made for the total atomic rearmament of the Federal Republic" were "in complete contradiction to the national interests of the German people" and made Germany "the centre of the atomic war danger in Europe." It accused the Federal Government of "sharpening the cold war by . . . the systematic circulation of slanders about the German Democratic Republic" ; of wishing "to prevent negotiations between the two German States on methods of bringing them nearer to each other" ; and of "pursuing without hindrance its imperialist concept of integrating the German Democratic Republic into the Federal Republic by force."

Turning to the *Bundestag* resolution of July 2, the East German declaration asserted that it had "nothing in common with the endeavour to reunite the two German peoples as one peace-loving and democratic State," and said that its implementation "would mean that an alien decision would be imposed on the German people concerning its State and social order" The declaration continued : "A decision on this question is one for the German people alone. The unification of the two German States cannot be a matter for foreign Powers, not even for the four Great Powers ; it is the innate right of the German people themselves . . ."

After describing the *Bundestag* resolution as "directed not only against the interests of the German people but also against the peace interests of other nations," and as designed "to divert attention from the problem of maintaining peace in Europe," the declaration reaffirmed the earlier East German proposal for the creation of a German Confederation. It went on to say that the "principal need" was to make immediate preparations for the conclusion of a peace treaty with Germany, quoting in this connexion a statement by Herr Ulbricht (at the last Socialist Unity Party congress) in which he had said that "a united, peace-loving, democratic, and independent Germany must not be bound to any military bloc or economic association like the European Coal and Steel Community. This would mean that Western Germany would have to leave NATO and that Eastern Germany would have to leave the Warsaw Pact."

After outlining the proposals made in the Notes to Britain, the U.S.A., France, and the Soviet Union, the declaration concluded : "This German commission [i.e. the one to be established by Western and Eastern Germany] would be empowered to push forward with the establishment of a united, peace-loving, and democratic German State—a matter which is solely the concern of the two German States. It should deal with questions concerning the relations of the two German States with each other, leading to discussions on economic relations, Customs and currency matters, transport and telecommunications, etc. The question of making travel between the two German States easier could also be solved, provided the Federal Republic is prepared to renounce support for any attempts to undermine constitutional conditions in the German Democratic Republic through spies and secret agents. . . ."

The Notes to the three Western Powers [which do not recognize the East German regime] were transmitted through the Czechoslovak Government. The U.S. State Department announced on Sept. 8, however, that it would send no reply to the East German Note ; a State Department spokesman said that the U.S. Government fully shared the West German view that the Note was an "affrontery," and that the holding of free elections throughout Germany and the formation of an all-German Government was an indispensable first step towards a peace treaty. It was similarly stated in London and Paris that no reply to the East German communication would be sent by the British and French Governments.

The Soviet Government sent identical Notes on Sept. 18 to the U.S., British, and French Governments, as well as Notes to the East German and West German Governments. In all of these it supported the East German proposal for the immediate conclusion of a peace treaty with Germany, which, it said, the U.S.S.R. had itself previously advocated. It also approved the East German proposal for the setting-up of a second commission consisting of representatives of the two German States, and expressed the Soviet Government's willingness "to give such a commission any assistance it requires."

Western Replies to U.S.S.R. and Western Germany.

In identical replies to the Soviet Government, delivered on Sept. 30, Britain, France, and the U.S.A. expressed their willingness to discuss the question of German reunification with the Soviet Union within a four-Power working group, as suggested by the German Federal Government.

The Notes reiterated the Western view that German reunification through free elections and the setting-up of an all-German Government should precede the negotiation of a peace treaty. They accordingly rejected the Soviet proposal to entrust the question of German reunification to a commission of East and West German representatives. In this connexion the Western Notes said that only a Government set up in accordance with the wishes of the German people could "undertake obligations which inspire confidence in other countries and are regarded by the German people themselves as just and binding." Moreover, the German representatives who would participate in discussions on a peace treaty preceding reunification could never bind a future all-German Government to carry out their decisions.

The Soviet proposal was also rejected on the ground that "the regime set up in the Soviet Zone does not represent the will of the East German people" and was "rightly regarded by the population in all parts of Germany as a regime created by a foreign Power and maintained in office by foreign troops." Referring to the directives issued by the four Heads of State at Geneva in 1955, the Western Notes expressed willingness to negotiate with the Soviet Union—at a "Summit" conference or in any other way—on any proposals "based on the honest intention to bring about the reunification of Germany in freedom."

On the same day the British, French, and U.S. Governments formally replied to the West German Note of Sept. 9 ; they welcomed the German initiative as expressed in the *Bundestag* resolution, and stated that they were informing the Soviet Government of their support for the *Bundestag's* proposal.

New Bundestag Resolution.

The *Bundestag* and most members of the Federal Government held a three-day session in Berlin on Oct. 1-3, at which the following resolution was unanimously approved :

"(1) The *Bundestag* formally protests against the continued persecution of the people of Eastern Germany, a persecution which has led to more than 3,000,000 of them seeking refuge in the Federal Republic. It would be an act of political reason as well as of common humanity to give the people of Eastern Germany the right to decide their own future and to return to the German community.

(2) The *Bundestag* protests in particular against the cold-blooded refusal of the East German regime to allow free movement across the inter-zonal frontier. Because of this, the traffic has declined by 85 per cent since last year.

(3) The *Bundestag*, in company with the Governments of the *Länder* and of Berlin, will continue to ensure a humane reception of the East German refugees and their swift integration into the life of the Federal Republic. It appeals to every West German to give East Germans the welcome they deserve, so that the world may realize that they support the ideal of unity by deeds as well as words

(4) The Federal Republic will continue to regard itself as the guarantor of German democracy and the German right to reunification. This does not absolve the great Powers from their responsibility for promoting reunification, which can only result from the freely expressed wishes of the whole German people.

(5) The *Bundestag* reaffirms its proposal for a standing four-Power committee on the German question, which can work out what steps have to be taken to reunify Germany."

Before the adoption of the resolution, Herr Lemmer (Federal Minister for All-German Questions) made a statement on conditions in Eastern Germany.

After emphasizing that more than 3,000,000 people had fled from Eastern Germany since 1949, Herr Lemmer drew special attention to the recent mass flight of doctors and teachers, which was causing great hardship in Eastern Germany, he appealed to members of both professions to stay at their posts as long as possible. Between Jan. 1 and Aug. 31, 1958, a total of 813 doctors, veterinary surgeons, and dentists, as well as 115 pharmaceutical chemists, had taken refuge in Western Germany, compared with 260 in the same period of 1957; as a result, many localities in Eastern Germany were now without a doctor. Since the beginning of 1958, some 250 professors, lecturers and tutors had fled from Eastern Germany, in addition to 2,300 teachers; in August alone 619 teachers had fled to the West, two-thirds of them young men.

Herr Lemmer also stressed that in the first half of 1958 legitimate travel from Eastern to Western Germany had dropped by approximately 75 per cent. The Federal Government was always ready to arrange discussions between the appropriate authorities on increased traffic, but behind all the suggestions from Eastern Germany lay the aim of forcing the Federal Republic to recognize the East German regime—which it was not prepared to do. In conclusion, Herr Lemmer emphasized that the serious situation of the population in Eastern Germany constituted a heavy strain on German-Soviet relations, and that any improvement in those relations was entirely dependent on the conditions of life of the East German people.

Adenauer-Smirnov Discussion. - Note Exchanges between Soviet and West German Governments.

Dr. Adenauer stated in a broadcast on Oct. 2 that the Federal Government would try to find a solution to the German question by means of diplomatic negotiations with the Soviet Union. The Federal Chancellor accordingly had a meeting on Oct. 14 with M. Smirnov, the Soviet Ambassador in Bonn, but their talk produced no result.

A Soviet *aide-mémoire* was handed to Dr. Adenauer by M. Smirnov complaining that the opportunities for improving relations between the two countries were "far from being fully utilized"; that anti-Soviet propaganda was being "ceaselessly" conducted in the Federal Republic; that hostile attacks on the Soviet Union appeared most frequently in those newspapers which were "close to Federal Government circles"; and that the Federal Government was planning to set up a special body for a "propaganda war against the U.S.S.R. and other Socialist countries." It went on: "The Soviet Government cannot overlook frequent statements by official spokesmen making the further development of relations between the two countries conditional on the extent to which the Soviet Government would help the Federal Government in its attempts at interference in the internal affairs of the Democratic Republic." Expectation of such Soviet interference, it said, was "utterly unrealistic," and "the Soviet Union will never agree to building its relations with any State on such foundations."

The text of a Note sent by the Federal Government to the Soviet Government on the previous day was released on Nov. 18. This Note, which was in reply to the Soviet Note of Sept. 18 [see above], contained an important modification in the attitude previously adopted by the Federal Government, inasmuch as it agreed that a four-Power commission on the German question [which had been proposed in rival forms by the East and West] should be authorized to discuss all aspects of the problem, not excluding the preparation of a German peace treaty; the possible participation of East and West German representatives was also implicitly accepted.

The Note acknowledged that the Soviet Government had "taken up the idea of forming a four-Power working group according to the *Bundestag* resolution of July 2." As the French, British, and U.S. Governments had also agreed to the *Bundestag* proposal, the four great Powers were thus "basically in agreement that the formation of such a working group would be useful." It continued:

"An immediate meeting of such a four-Power commission apparently faces the fact that the conceptions of the task of this group differ. The Federal Government believes that the more formal attitudes are replaced by realistic conceptions, the more easily this difficulty could be overcome. The deliberations of the four-Power commission should naturally . . . serve the aim of furthering the re-establishment of German unity. This certainly does not exclude discussion of all other aspects related to this aim. This also applies to questions connected with the preparation of a German peace treaty . . . There is, however, the fact, not disputed by the Soviet Government, that a peace treaty re-establishing the sovereignty of Germany could be concluded only with a Government responsible to the whole people. The question of German participation in the deliberations of a four-Power working group, such as by calling in German experts, should be examined by the group."

The Note concluded by referring to the resolution of Oct 1 in which the *Bundestag* had "unanimously declared its readiness to support any negotiations which would smooth the way to an immediate free decision by the whole German people as soon as an agreement by the four Powers made this possible." It expressed the hope that the Soviet Government would co-operate in implementing this suggestion.

M. Khrushchev's Proposal for Change in Status of Berlin. - Soviet Responsibilities in East Berlin to be transferred to East German Government.

In a speech on Nov. 10 at a reception for a Polish Government delegation led by M. Gomulka, which was visiting Moscow for Soviet-Polish discussions, M. Khrushchev made the following statement on the Soviet Union's intention to transfer control of East Berlin to the East German Government:

". . . At present the Western press writes a lot about the fact that the German Federal Republic is about to propose to the Soviet Union, the U.S.A., Britain, and France a new four-Power conference to solve for the Germans—and despite the Germans—the question of unifying their country. But this is the continuation of the old, unrealistic policy which contradicts common sense and has no legitimate basis. No Powers have the right to interfere in the internal affairs of the German Democratic Republic, or to dictate their will to it.

"We quite understand the natural desire of the German people for reunification of their motherland. But the German military and their American patrons only use these national sentiments for a purpose which has nothing in common with German unity or with ensuring a stable peace in Europe. In fact, the military circles of Western Germany are following the road of deepening the division of the country, and of preparing military adventures. If the West German Government tried to solve the question of German unity, not by words but by deeds, then it would take the only road which leads to that goal—the road of establishing contacts with the German Democratic Republic. . . .

"The German question—if this means unification of the two German States now in existence—can be solved only by the German people themselves through the *rapprochement* of those States. The conclusion of a peace treaty with Germany is another matter. This is a task which must be solved in the first instance by the four Powers which were members of the anti-Hitler coalition, in co-operation with Germany's representatives. The signing of a German peace treaty would help the normalization of the whole situation in Germany and in Europe as a whole. The Soviet Union has been proposing, and still proposes, to tackle this matter without delay.

"When one speaks of the four Powers' obligations with regard to Germany, one must speak of the commitments emanating from the Potsdam Agreement. . . . The Powers taking part in the anti-Hitlerite coalition undertook clear-cut and definite commitments to eradicate German militarism, to prevent its revival forever, to take all measures to ensure that Germany should never again threaten her neighbours or the maintenance of world peace. The parties to the Potsdam Agreement also recognized the need to put an end to German fascism, to bar forever the road to its revival in Germany, and to put an end to all Fascist activity or propaganda. An important part of the Potsdam Agreement was the commitment to liquidate the dominance of cartels, syndicates and other monopolies in the German economy—i.e., those forces which had brought Hitler to power and which encouraged and financed his military adventures. . . .

"What have we got now, more than 13 years after the Potsdam Conference? Nobody can deny that the Soviet Union has been observing all these agreements irreproachably. They have been carried out fully in the Eastern part of Germany, the G.D.R. Let us now look at the way in which the Potsdam Agreement is being implemented in Germany's Western portion, the G.F.R., responsibility for whose development rests with the three Western Powers. One must say straightaway that, far from being eradicated in Western Germany, militarism is regarding its head higher and higher.

"The Powers which should have fought against the rebirth of German militarism drew Western Germany into the aggressive military bloc created by them—NATO. They are doing everything to aid the growth of German militarism and to create in Western Germany a large army . . . which, according to the calculations of the German militarists, will become stronger than the armies of Britain and France. . . . The German Federal Republic already has U.S. rockets which can be equipped with nuclear warheads. In the economic aspect, too, Western Germany is literally flying at the throat of its West European allies. All its economic resources are being placed at the service of rising German imperialism.

"To whichever of the basic propositions of the Potsdam Agreement we turn—those concerning the demilitarization of Germany, and the prevention of a resurgence of fascism—we unavoidably come to the conclusion that these propositions, to which were attached the signatures of the U.S.A., Britain, and France, have been violated by those countries.

"What then has remained of the Potsdam Agreement? Virtually one thing only has remained: the so-called four-Power status of Berlin—that is, that Article according to which the three Western Powers have the possibility of holding sway in West Berlin; of turning that part of the city into a kind of State within a State; and of making use of this to carry on from West Berlin subversive activity against the German Democratic Republic, the Soviet Union, and other Warsaw Pact countries. On top of everything, they enjoy the right of unhampered communication between West Berlin and Western Germany by air, rail, road, and the waters of the German Democratic Republic, which they do not even wish to recognize.

"The question arises: Who profits from such a situation and why do not the United States, France, and Britain violate also this part of the four-Power treaty? The matter is quite clear. . . . They are clinging to it in every possible way because the agreement on Berlin is beneficial to the Western Powers . . . The Western Powers would naturally have nothing against extending such Allied privileges *ad infinitum*, although they have long ago abolished the legal basis on which their presence in Berlin rested.

"Has not the time come for us to draw the necessary conclusions from the fact that the most important points of the Potsdam Agreement relating to the securing of peace in Europe . . . have been violated, and that certain forces continue to direct German militarism against the East, as before World War II. Is it not time to revise our attitude to this part of the Potsdam Agreement and to reject it? The time has evidently come for the Powers which signed the Potsdam Agreement to abandon the remnants of the occupation regime in Berlin and thus make it possible to create a normal atmosphere in the capital of the German Democratic Republic. The Soviet Union, for its part, will hand over to the sovereign German Democratic Republic those functions in Berlin which are still wielded by Soviet organs.

"Let the United States, France, and Britain form their own relations with the German Democratic Republic and come to an agreement with it if they are interested in certain questions relating to Berlin. As for the Soviet Union, we shall observe as sacred our obligations which stem from the Warsaw Treaty and which we have confirmed to the German Democratic Republic many a time. Should any aggressive forces attack the German Democratic Republic, which is an equal partner of the Warsaw Treaty, we will consider it as an attack on the Soviet Union and on all the parties to the Warsaw Treaty. We shall rise to the defence of the German Democratic Republic, and this will mean the defence of the basic security interests of the Soviet Union, of the entire Socialist camp, and of the cause of peace throughout the world."

M. Khrushchev's statement of Nov. 10 confirmed an earlier statement made on Oct. 27 by Herr Ulbricht (First Secretary of the East German Socialist Unity Party), in which Herr Ulbricht said: "The whole of Berlin lies within the territory of the German Democratic Republic. The whole of Berlin belongs to the area under the sovereignty of the German Democratic Republic. The authority of the Western occupying Powers no longer has any legal basis in Berlin." The East German Foreign Ministry, had asserted on Oct. 30 that the present system of guaranteed communications for the Western Powers between Berlin and Western Germany depended on "a temporary and exceptional agreement."

In a speech on Nov. 14 to graduates of Soviet military academies M. Khrushchev said that the Soviet Government was "preparing an appropriate document on the status of Berlin." He added: "We intend to make definite proposals to the countries that took part in the war against Hitlerite Germany and Fascist Italy. When we speak of Berlin we do not declare that we shall fight against the West. We have never said that. But we have said that the aggressors will be given a crushing rebuff if they attack the Soviet Union and the Socialist countries.

A *Pravda* article of Nov. 18 rejected the firm stand which the Western Powers had taken up in defence of their rights in Berlin [see below]. "In the post-war period," *Pravda* wrote, "the occupation of West Berlin has been constantly used by the Western Powers as a venomous weapon with which to poison the atmosphere in Europe. It is now high time for a radical solution of the Berlin problem in the interests of strengthening peace and international security. . . . Even if the agreements on occupation—which are no longer valid—are recalled, it must be said that Berlin was never regarded as a special fifth zone of occupation. The Western Powers created in Berlin an artificial situation . . . in order to take advantage of the unlawful presence of their troops in the city and to create there a base for subversive activity against the German Democratic Republic, the Soviet Union, and the other Socialist countries. Such a situation is . . . intolerable.

"Having created an atmosphere of war hysteria around the Berlin issue [*Pravda* continued], some persons in the West evidently expect to shake the Soviet decision. . . . Such a method is unavailing in relations with the Soviet Union. . . . The Western Powers, having frustrated the fulfilment of the Potsdam Agreement, have lost every legal right to maintain their privileges in Berlin. They have deprived themselves of the moral right to occupy the Western part of that city. . . . Western statesmen who cling to the occupation status in Berlin are seriously mistaken if they believe that the implementation of the measures planned by the Soviet Government requires consent on the part of those Powers. No such consent is required. The Soviet Union will firmly adhere to this line and will put it into effect."

Western Powers' Reactions to M. Khrushchev's Statement on Berlin.

The British, U.S., and French Governments reacted firmly to M. Khrushchev's announcement, official statements being issued in London, Washington, and Paris stressing that the Western Powers were in West Berlin by right, and that their status in this respect derived not from the Potsdam Agreement but from the Four-Power declaration of June 5, 1945, and the agreements with the Soviet Union concluded on May 4, 1949, after the ending of the Berlin blockade. Officials of the three Powers were reported to have held close consultations and to have prepared detailed plans of action for all foreseeable contingencies which might arise out of a Russian withdrawal.

The statements issued by the three Western Powers are summarized below:

Britain. A Foreign Office spokesman stated on Nov. 10 that the Western position in Berlin did not depend on the Potsdam Agreement but on the right of occupation deriving from the unconditional surrender of Germany in 1945, and that neither the Western Powers nor the Soviet Union could unilaterally abrogate their responsibilities. Western access to Berlin was inherent in the right to maintain garrisons in the city, and this had been recognized in agreements with the Soviet Union after the ending of the Berlin blockade in 1949. Acceptance of M. Khrushchev's proposals would amount to abandoning West Berlin to the mercy of the Soviet authorities, and would be contrary to the Western undertakings to protect Berlin. It was recalled in this connexion that Britain, France, and the U.S.A. had frequently stated that they would regard an attack on West Berlin as an attack on their own forces.

France. A spokesman of the *Quai d'Orsay* similarly stated on Nov. 10 that the presence of French forces in Berlin was based not on the Potsdam Agreement but on the quadripartite agreements of June 5, 1945, and on formal Soviet recognition as a result of the Foreign Ministers' conference held in May 1949 after the Berlin blockade. These multilateral arrangements could not be invalidated save by common agreement between the four parties. "Surprise" was expressed that M. Khrushchev should have made threats whose implementation could provoke a "very grave crisis."

United States. President Eisenhower's Press Secretary (Mr. Hagerty) announced on Nov. 21, on behalf of the President, that the U.S. Government would not retreat "from its firm intentions in West Berlin" and would "maintain the integrity" of the city regardless of the Soviet threat to turn over its own occupation functions in the eastern sector of Berlin to the East German regime. Mr. Hagerty made it clear that the President's statement had been issued after the fullest discussion of the situation with Britain and France.

Mr. Dulles said on Nov. 24 that any Russian attempt to force the Western Allies out of Berlin would be "met with unity and firmness." Asked whether he would attend a conference of the three Western Foreign Ministers in West Berlin, as had been suggested, Mr. Dulles answered that he would "do anything if it is necessary" but that he saw no immediate need for such a meeting.

Mr. Ormsby-Gore (U.K. Minister of State, Foreign Office) announced in the House of Commons on Nov. 26 that Mr. Macmillan had sent a personal message about Berlin to M. Khrushchev on Nov. 22. Although the text of the letter was not published, it was authoritatively stated on Nov. 28 that Mr. Macmillan had made it clear to the Soviet Government that Britain had every intention of upholding her rights in Berlin, and that she looked to the Soviet Government to fulfil its obligations.

Reactions in Western Germany.

The Federal Government issued a statement on Nov. 12 saying that any unilateral renunciation by the U.S.S.R. of international agreements on the four-Power status of Berlin would dangerously increase political tensions, affect Soviet-German relations, and involve a breach of international law which would seriously put in question the value of Soviet contractual undertakings. After recalling the repeated guarantees of the defence of Berlin given by the Western Powers, the statement said that "the Federal Government, the German people, the population of Berlin, and the entire free world have confidence in these declarations and in the effective protection which they pledged."

Dr. Adenauer said on Nov. 16 that M. Khrushchev's threats had created "a dangerous situation not only for Western Germany but for the whole world." He added, however, that he did not wish "in any way to respond to M. Khrushchev's provocation," and that the West German Note to Moscow [see above] would be left as drafted and would not be sharpened. After thanking the Western allies for their prompt reaction to the Soviet challenge, he gave a warning

against doing anything which might create the impression that the four-Power status of Berlin was to be "whittled away" from the West German side; in this connexion he deprecated the demand of Herr Brandt (Chief Burgomaster of West Berlin) that the deputies representing the city in the *Bundestag* should receive full voting rights. The Chancellor added that the question of counter-measures would arise only in the case of an actual blockade of Berlin, either by the Soviet or the "zonal" (i.e. East German) authorities; in such an eventuality inter-zonal trade would "run into difficulties."

M. Smirnov had a further meeting with Dr. Adenauer on Nov. 20, at which the Federal Foreign Minister (Dr. von Brentano) was also present.

An official statement said that the Ambassador had informed the Chancellor of the intentions of the Soviet Government with regard to the status of Berlin; the Soviet Embassy, however, issued a separate statement in which it was claimed that M. Smirnov had informed Dr. Adenauer "of the steps his Government intends to take to liquidate the occupation statutes concerning Berlin" This, however, was denied by a Federal Government spokesman, who said that M. Smirnov had merely explained M. Khrushchev's statement. Asked if the meeting had helped to relax tension, the spokesman replied in the negative but said that there was no cause for alarm while the matter was still under discussion. He described the political and diplomatic offensive against West Berlin as "very serious," but did not think that the situation would become "acutely dangerous."

Dr. Adenauer said in Munich on Nov. 21 that M. Smirnov had expressed the belief that Western Germany would welcome the freeing of Berlin from occupation forces. He (Dr. Adenauer) had answered that the Allied troops were regarded by the people of West Berlin as protectors of freedom, and that it was most important that they should remain in the city.

The Chief Burgomaster of West Berlin (Herr Brandt) made the following statement in the City Assembly on Nov. 20:

"We shall master what lies ahead of us with determination and confidence. Our daily work and our free order are secured. Let me reiterate to the world that 3,500,000 people live here—2,250,000 of them in West Berlin—who want only to live in freedom and to complete their work of peaceful reconstruction. We have no weapons, but we have a right to live and we have good nerves. Presumably there will be some further tests of our nerves, but that will neither confuse nor disconcert us.

"Free Berlin belongs to the free West. We Berliners will not allow ourselves to be parted from our friends, just as our friends will not allow themselves to be parted from Berlin. . . . We are not made of the stuff that is blown over by a gust of wind. For this the people of Berlin have had too many experiences."

Dr. von Brentano flew to West Berlin on Nov. 23 for discussions with Herr Brandt, whilst on Nov. 25 he presided over a meeting of the West German Ambassadors in London, Washington, Paris, Moscow, and Rome, who had been summoned to Bonn for consultations.

Reactions in Eastern Germany.

Herr Grotewohl, the East German Prime Minister, said in a press statement on Nov. 12 that M. Khrushchev's speech had "further paved the way for a settlement of the German problem," but refused to make any "sensational comment." He added that the major task of his Government was the securing of peace and that "the problem of the status of Berlin is not the major problem; it is a problem, but only one of many in Germany today."

On the same day (Nov. 12) the East German Government sent Notes to 60 other countries, through the East German Embassy in Moscow, asking them to recognize the German Democratic Republic and to reject the suggestion that the Federal Republic was the only legitimate government in Germany.

These Notes were accompanied by a memorandum on the alleged threat to peace involved in Federal Germany's rearmament policy, and also by a White Book denouncing the allegedly "aggressive character" of the Federal Government. The documents accused Western Germany and the Western Powers of using West Berlin as a "centre of espionage" against East Germany; alleged that the West German economy was being developed "on monopolistic lines" by the restoration to power of a small group of individuals, including former Nazis such as Herr Krupp; and accused Federal Germany of "abolishing democratic rights in its struggle for a clerical-totalitarian regime" and of "preventing the establishment of a united, peace-loving, and democratic Germany."

Herr Ulbricht, said in an interview on Nov. 25 that Eastern Germany was prepared to negotiate with the Western Powers about their right of access to West Berlin; there was no point in fearing that the Communists would blockade the city because "the possibility of negotiations exists."

Herr Ulbricht added, however, that "there is . . . no legal basis for the presence of foreign occupation Powers in Berlin," and that, in the event of the Soviet Union handing over traffic controls, "all foreign organs will be able to regulate these questions with the German Democratic Republic." On the question of diplomatic recognition, Herr Ulbricht said: "He who uses the territory of the German Democratic Republic gives *de facto* recognition to its existence. That applies to the water, the land, and the air. . . . The German Democratic Republic, together with its capital of Berlin, is a sovereign State in which there is no longer an occupation Power nor occupation rights."

Soviet Notes on Revision of Status of Berlin. - Proposed "Free City" Status for West Berlin.

The Soviet proposals for Berlin were formally handed to the British, French, U.S., and Federal German Ambassadors by M. Gromyko on Nov. 27, after the latter had visited East Berlin for discussions with Herr Grotewohl, Herr Ulbricht, and Dr. Bolz, the East German Foreign Minister.

The principal Soviet proposal was that West Berlin should become a demilitarized Free City, with Britain, France, the Soviet Union, and the U.S.A., and possibly the United Nations, guaranteeing its status. Under a separate agreement, Eastern Germany would guarantee communications between West Berlin and the outside world, in return for an undertaking by West Berlin not to tolerate "subversive activity against Eastern Germany." If by the end of six months no agreement had been reached on this proposal between the Soviet Union and the Western Powers, the Soviet Government would carry out its plans in agreement with Eastern Germany, which would then be able to exercise full sovereignty by land, sea, and air over the approaches to West Berlin.

The Soviet Notes to the three Western Powers were in identical terms; they will be summarized in a subsequent issue. (Times - Daily Telegraph - Manchester Guardian - New York Times - New York Herald Tribune - Le Monde, Paris - Frankfurter Allgemeine Zeitung - Soviet Embassy Press Department, London) **(Prev. rep. Reunification Question, Western Germany, 16141 A; Eastern Germany, 15785 A; "Summit" Correspondence on German Question, 16069 A; 15975 A; 15625 A; NATO Views, 16238 A; Soviet-West German Relations, 16178 A.)**

Note. The Declaration of June 5, 1945 [see 7227 A], on which the Western Powers' position in Berlin is based, stated in Article 12: "The Allied representatives will station forces and civil agencies in any or all parts of Germany as they may determine." This declaration, published two months before the Potsdam Agreement, was amplified by agreements previously reached by the European Advisory Commission, which defined the four occupation zones of Germany and the three (later four) sectors of Berlin. A joint statement, issued simultaneously, provided that Berlin was to be jointly occupied and administered by an inter-Allied governing authority (Kommandatura) The agreements of the European Advisory Commission have not been published, but were described in a White Paper issued at the time of the Berlin blockade on Oct. 1, 1948. The Potsdam Agreement (signed on Aug. 2, 1945) established a Council of Foreign Ministers and laid down the principles which were to govern the treatment of Germany, but made no mention of Berlin [see 7361 A.]

The Western Powers' rights of access and of communications with the city were not contained in any written agreement, but are inherent in the right to occupy Berlin. After the Berlin blockade the Soviet Union expressly recognized these rights in the New York Agreement of May 4, 1949 [9971 A] and the Paris Agreement of June 20, 1949 [10065 A]. Article I of the New York Agreement stated: "All the restrictions imposed since March 1, 1948, on communications, transportation, and trade between Berlin and the Western Zones of Germany will be raised on May 12, 1949."

The Western Powers' rights of access to Berlin by air are covered in general by their right to be in Berlin, and in particular by a four-Power agreement of Nov. 30, 1945, which defined three air corridors for their use. This agreement provided that air movements within these corridors would be controlled by an Air Safety Centre in Berlin, operated on a quadripartite basis.

The Western Powers reasserted their position in the Final Act of the London Nine-Power Conference on Oct. 3, 1954, which contained a special declaration on Berlin [see page 13812, second column.]
(Ed. K.C.A. - Times)

A. FRANCE. — Renewal of British Wool Credit.

It was announced in London and Paris on Sept. 12 that a new revolving credit of £12,500,000, which could be increased temporarily to £15,000,000 during the peak of the wool-buying season, had been arranged by Lazard Brothers and Co. of London, on behalf of a group of British banks, with the *Groupement d'Importation et de Répartition de la Laine* for financing French wool purchases in the British Commonwealth during the 1958-59 season. The amount was the same as that arranged last year. Repayment is linked with the export of French wool products as hitherto, and will be completed in December 1959. (Financial Times - Le Monde, Paris)
(Prev. rep. 15797 D.)

A. UNITED KINGDOM. — Defence Policy. - Report of Grigg Committee on Recruiting.

The Advisory Committee on Recruiting, set up by the Government in December 1957 with Sir James Grigg (a former Secretary for War) as chairman—see page 16031, first column—published its report as a Blue Book on Nov 4. The Committee's terms of reference were "to examine the factors bearing on the willingness of men and women to serve in the armed forces and to make recommendations" It made 30 recommendations, providing *inter alia* for (1) biennial reviews of Service pay and pensions; (2) improved conditions of service; (3) higher pensions; (4) larger educational allowances in respect of children of officers and "other ranks"; (5) changes in the career structure of officers.

The Government's acceptance of the Committee's major recommendations was announced in a White Paper published on the same day. The Grigg Report is summarized below.

General Considerations.

The Committee pointed out that it had related its task to the Government's plan to end National Service by December 1962, and to rely thereafter on Regular forces of about 275,000 men. Although present indications were hopeful, the Committee considered that to achieve a balanced force of this size some improvement in current rates of recruiting would be necessary, the main difficulty being to fill "those units and corps which offer the least glamour and variety." The general problem was "to bring Service life more in line with modern thought and social conditions," while "still allowing it to retain the essential characteristics of a disciplined force."

The Background to the Recruiting Problem.

The Committee specifically rejected any suggestion that the pay of officers and "other ranks" was at present a deterrent to recruiting, but stressed that civilian life had become easier for potential "other ranks" owing to changes in the structure of society; as a result, Service life had now "much more competition from civilian life than ever before." For young single men the influence of their parents or their fiancées was "paramount" in the decision whether or not to join up; other important influences were (*a*) the dissuasion of disgruntled National Servicemen; (*b*) current views on the place of the Forces in society. In this connexion the report said: "On the whole we consider that the Royal Navy and the Royal Air Force still command respect, but the Army has undoubtedly suffered from the fact that the great bulk of National Servicemen have performed their often unwilling service in its ranks."

After listing the main advantages of Service life as security of tenure; perquisites such as generous leave with pay, travel, sport, and adventure; and the chance of serving the country, the Committee enumerated the principal grievances put to it during its investigations. These included: (1) the inadequacy of "disturbance grants" (intended to provide for the cost of moving house or quarters, etc.); (2) "acute concern" at the effect of continued inflation on the real value of pay and pensions; (3) recent Service reorganizations which, by creating redundancy among officers and n.c.o.'s, had tended to diminish public faith in the security of Service life; (4) unnecessary guard duties and fatigues; (5) the quality of Service equipment, which, though "reasonably good" in the Navy and R.A.F., was by no means so in every Army unit; (6) the unpopularity of Army battle-dress, waterproof squares, and kitbags; (7) the "depressing and antiquated" atmospheres of many barrack-blocks, dining halls, and kitchens.

The Committee blamed the Service departments, and especially the War Office, for their "reluctance to question long-standing assumptions on recruitment and the engagement structure." In this connexion it said that it had been "struck by the fact that the Armed Forces, unlike other employers of labour, had not related all their points of entry to the normal stages at which young people leave the educational system." It reported little complaint from Regular servicemen about "the measure of discipline necessary for efficiency—including everything comprised by what is known as 'bull.'" On the contrary, the report emphasized that "voluntary recruiting is best for those units which have the reputation of exacting the strictest discipline and insisting on a high degree of smartness."

Other subjects discussed in the report included (1) the traditional predominance of the public schools as a source of Service cadets, (2) the importance of educational facilities in the Forces; (3) deterrents to recruiting in the Women's Services; (4) officers' complaints of too much centralization and paper work.

As regards (1) the Committee pointed out that in the future "a few public schools cannot be expected to provide even a sizable proportion of the Services' demand for 1,000 cadets a year," and that unless it was possible to make first-class officers out of the best boys from grammar schools, "shortfalls of officers in numbers and quality must be expected." In respect of (2) the report stressed that "the soldier who has taken the trouble to educate himself in his spare time is likely to be better qualified for advancement and an easier man to place when it comes to resettling him in civil life." While praising much of the Forces' educational work, the Committee considered that in this respect the Navy and the R.A.F. were "more enthusiastic than the Army"; it expressed the hope that the Army "would not become a cultural desert when National Service disappears."

The Committee stressed that there would have to be a "sharp increase" in women's recruiting (to yield about 5,000-6,000 recruits a year) in order to achieve the desired expansion of the Women's Services. It believed that the greatest single deterrent was the idea that these Services were not really needed in peacetime, but it also found dissatisfaction at the relation between women's pensions and men's. There was also a strong feeling in the W.R.A.C. that the uniforms were unattractive, although the W.R.N.S. and W.R.A.F were generally satisfied with theirs.

Recommendations.

The Committee's principal recommendations were as follows:

(1) Biennial reviews of Service pay and pensions to ensure that they did not fall below civilian levels. The first review should be carried out in time for any changes to take effect on April 1, 1960.

(2) Increases in "disturbance allowances" for "other ranks," viz., from £12 to £25 for those going into Service accommodation, and from £22 10s. to £50 for those going into private accommodation Rates for officers to be raised to £40 and £80 respectively.

The Committee estimated the extra cost of these increases at about £1,000,000 a year.

(3) Increases in education allowances for children of officers and "other ranks" at boarding schools, as follows: first child, from £75 a year to £150; second child, from £100 to £175; third child, from £125 to £200. Annual allowances for children boarded out privately while obtaining suitable education should be increased from £35 2s. to £50 for each child.

The extra cost of these changes was estimated at £750,000 to £1,000,000 a year.

(4) Children of officers and "other ranks" at school in Britain and separated from their parents serving abroad should be allowed one free passage to their parents each year, instead of only one during each tour of duty, as at present.

This proposal, made after consulting the Service Departments, was estimated to cost an extra £125,000 a year.

(5) Increases in pensions and terminal grants paid to "other ranks" in accordance with the following scheme, drawn up by the War Office and Air Ministry (present rates in parentheses);

	Annual Pension		Terminal Grant	
	22 years	37 years	22 years	37 years
	£	£	£	£
Warrant Officer ..	243	575	729	1,725
	(180)	(396)	(330)	(810)
Staff Sergeant	210	496	630	1,188
	(144)	(367)	(275)	(635)
Sergeant	186	439	558	1,317
	(124)	(318)	(225)	(525)
Corporal	143	338	429	1,014
	(105)	(288)	(175)	(400)
Private .. .	114	270	342	810
	(86)	(255)	(125)	(305)

The report stated that the Admiralty had proposed a more expensive scheme which the Committee could not accept; it suggested that the Admiralty should draw up a new scheme to cost roughly the same per head as the scheme set out above.

The Committee stressed that present pensions for "other ranks" were "inferior to those paid in outside occupations," e.g. the police and fire services, and were a "serious deterrent" to recruiting. The new scheme, when applied to all three Services, was estimated to cost about £2,000,000 in 1958-59, rising to £6,000,000 in 1979-80.

(6) Increases in "family pensions" so as to give a widow one-third of the pension her husband had been drawing (or, in the case of those still serving at the time of death, one-third of the pension he would have drawn if he had been invalided).

(7) Enlargement of training facilities to allow the Services to obtain between one-third and one-half of their "other ranks" requirements from boy and apprentice entrants. For grammar schools holding the G.E.C. at ordinary level, the possibility might be considered of creating an entry at "other ranks" level, but with suitable status.

(8) Expansion of Welbeck College [a pre-Sandhurst Army college run on boarding-school lines—see 12393 A], which should be given an Arts side and possibly be run for the benefit of all three Services.

(9) Extension of the scholarship scheme now operated by the Royal Navy and the R.A.F. to cover the Army also.

(10) More promotion from the ranks; tests for advancement in the ranks themselves should be less academic and related closely to the duties of the higher position.

(11) Reorganization of officers' career structure to give choice of retirement before 40 or employment until 60.

The Committee said in this connexion: "The pattern of an officer's career is anachronistic. It presupposes that the typical officer will be a public school man who, after 20 years in the Army, can retire to manage his estates."

(12) Quick decisions on the future of particular stations, to enable building plans to be prepared.

(13) Provision of new uniforms and replacement of kitbags by holdalls.

(14) Changes in the engagement structure in the Women's Services to enable girls to join at 17. The possibility should be considered of allowing women to leave the Services (after completing their initial engagement) on giving six months' notice.

(15) Increase of pensions in the Women's Services (at present fixed at 66 per cent of comparable men's pensions) to 85 per cent of men's pensions.

(16) Smaller stocks of women's uniforms at any one time, to enable changes to be made when necessary for up-to-dateness. Blouses or dresses should be issued for summer wear.

The White Paper stated that the Government had accepted recommendations 1-6 and 15, dealing with biennial reviews, "disturbance" and education allowances, and pensions, and that the increases recommended would take effect from April 1, 1959. As regards training facilities, it accepted recommendations 7 and 9, but had doubts about the proposal to enlarge Welbeck College; this, however, was being considered. Recommendation 10 (more promotion from the ranks) was accepted, but recommendation 11 (reorganization of officers' career structure) would present difficulties, though consideration was being given to it. The recommendations regarding changes of uniform were accepted, both as regards men and women, and the proposal to recruit women at 17 was being considered. The Government could not agree, however, to release women from the Services on the basis of six months' notice.

The members of the Committee, apart from Sir James Grigg, were Mr. A. D. Bonham-Carter ; Mr. H. Cudlipp, editorial director, *Daily Mirror* ; Mr. A. E. Howard ; Sir Philip Morris, Vice-Chancellor of Bristol University ; Mr. R. Openshaw, former general secretary of the Amalgamated Engineering Union ; and Dame Felicity Peake, former Commandant of the W.R.A.F.—(Cmnd. 545 and Cmnd. 570 - Times - Daily Telegraph - Manchester Guardian) **(Prev. rep. Defence Estimates, 16029 A ; Army Estimates, 16087 A.)**

A. INDIA - RUMANIA. — Rumanian Economic and Technical Aid for Construction of Assam Oil Refinery.

The Indian Minister for Mines and Oil (Mr. K. D. Malaviya) made a statement in the *Lok Sabha* on Nov. 19 on an agreement between the Governments of India and Rumania whereby the new publicly-owned oil refinery at Gauhati (Assam) would be built with Rumanian assistance. The agreement in question was signed by Mr. Malaviya in Bucharest on Oct. 20.

Mr. Malaviya said that the Rumanian Government had agreed to provide a long-term credit of 52,380,900 rupees (£3,929,500), representing the total estimated value of the supplies to be delivered and the technical and other services to be rendered by Rumania for the erection and construction of the refinery. The credit would bear interest at 2½ per cent p.a., and 15 per cent of the total would be repaid in six instalments—the first one 30 days after the signing of the agreement, and the last one 30 days after the refinery had gone into full operation. The balance of 85 per cent of the total credit would be repayable in 10 instalments, of which the first two would be due on Dec. 31, 1961, and the tenth on Dec. 31, 1965. The Rumanian Government would buy Indian goods as far as possible against the credit ; any balance which had not been utilized in this manner would be converted into transferable free currency after April 1, 1961, if desired by Rumania.

The Rumanian Government would undertake to design the refinery ; to supply the equipment and materials for the process units and auxiliary installations ; to ensure that the design, machinery, and equipment conformed to the most up-to-date Rumanian technical standards in regard to quality of materials and workmanship ; to provide technical assistance in construction work ; to make available the services of Rumanian engineers and technicians in a supervisory capacity ; to train Indian technicians in Rumania for building and operating the refinery ; to put the refinery into operation ; and to indemnify the Government of India in case of an infringement of a foreign patent.

The Indian Government would be responsible, *inter alia*, for the selection of the refinery's site and for furnishing the temporary facilities required, as well as constructional and other materials available from indigenous sources.

Mr. Malaviya stated that the new Assam refinery was expected to process about 570,000 tons a year, whilst the refinery in Bihar (for which offers of collaboration in its construction were under consideration) would process about 2,000 000 tons. It was hoped that the Assam refinery would be "on stream" by April 1961. Both the Bihar and Assam refineries would be in the public sector.—(The Hindu, Madras - The Statesman, Calcutta - Indian High Commissioner's Office, London) **(Prev. rep. 16150 C ; 16028 A.)**

B. Corrigenda.—The following corrections should be made in recently published articles :

(1) It was stated in 16410 A, on the basis of press reports, that Pakistan had recognized the "Provisional Government of the Algerian Republic." This statement was incorrect and, according to a notification from the Office of the High Commission for Pakistan in London, no such recognition has in fact been accorded.

(2) In the last paragraph of 16502 A (Baghdad Pact) the name of the outgoing Director of the Combined Military Planning Staff should be General Ekrem Arkalin, not Arkalım. (Ed. K.C.A.)

C. DENMARK. — Elections in Faroe Islands.

General elections for a new *Lagting* (Diet) took place in the Faroe Islands on Nov. 9, the results being as follows :

	Seats		Votes
	*New House**	*Old House*	
Social Democrats	8	5	3,584
Republicans (*Lösrivelses*) ..	7	6	3,329
Sambands Party	7	7	3,296
Folkeflokken	5	6	2,470
Moderate *Selvstyre* (Autonomy) Party ..	2	2	812
New Progressive Party† .	1	1	404

* Total membership 30, against 27 in the former House.
† Contested 1954 elections as *Borger* (Anti-Socialist) List.

The Social Democrats thus became the strongest party, gaining three seats and over 1,000 votes compared with the 1954 elections. The Republicans gained one seat, *Folkeflokken* lost one, and the other parties maintained their position.

Since 1954 the Faroe Government had been supported by a coalition of the *Sambands* party, *Folkeflokken*, and the *Selvstyre* party, which together commanded a majority in the former House. In the new Diet the Social Democrats, the *Sambands* party, and the *Selvstyre* party (i.e. the three parties which in 1947 supported the political agreement with Denmark on the islands' autonomy in home affairs) will have a majority.

The attitude of the various parties toward the Faroe Islands' relations with Denmark is described in 13948 B.
(Berlingske Tidende, Copenhagen - Politiken, Copenhagen) **(Prev. rep. 13948 B.)**

D. NEW ZEALAND. — Wairakei Geothermal Power Station in Operation.

The geothermal power station at Wairakei (North Island) went into operation on Nov. 15, when electric power from the station was switched into the national grid for the first time.

Test boring at Wairakei began in 1950 ; today there are more than 50 bores at depths ranging from 500 to 3,000 feet, from which tremendously powerful jets of steam rush up with a great roar. To reduce the deafening noise during the building operations, conical steel silencers were attached to the bore outlets, whilst a steam separator had to be developed to produce "dry" steam to drive the generators. The power station was built on the banks of the Waikato River, in the centre of a famous tourist area.

Although at present generating only 1,500 kw., the station's output will shortly be increased to 6,500 kw. as further bores are linked to the turbo-alternator. The first stage has been planned to produce 69,000 kw., to be increased to 151,400 kw. on completion of the second stage and to 252,600 kw. on completion of the third stage. The cost of the entire project will be £NZ 21,000,000.

Wairakei is the world's second geothermal power station, the first one having been built at Larderello, in Italy.
(Directorate of Information, Wellington) **(15624 C ; 14658 B.)**

E. SOVIET UNION. — Marshal Bulganin identified with "Anti-Party Group."

In an official report published by the Tass Agency on Nov. 13, Marshal Bulganin was for the first time described as a member of the "anti-party group" of M. Malenkov, M. Molotov, M. Kaganovich and M. Shepilov. The denunciation was contained in a report by M. Khrushchev on the new Soviet seven-year plan, in which reference was made to the "exposure and routing of the anti-party group of Malenkov, Kaganovich, Molotov, Bulganin and Shepilov," and which accused them of "faction-splitting activity" and "opposing the party's general Leninist line."—(Soviet Embassy Press Department, London)
(Prev. rep. Marshal Bulganin, 16405 B ; "Anti-Party Group," 15639 A.)

Note.—The Soviet seven-year economic plan will be summarized in a later issue. (Ed. K.C.A.)

F. JAPAN. — Crown Prince Akihito engaged to Commoner. - Engagement approved by Emperor.

The engagement of Crown Prince Akihito to a commoner, Miss Michiko Shoda, was announced by the Japanese Imperial Council on Nov. 27, following prior approval of the engagement by the Emperor Hirohito. Both Crown Prince Akihito (the heir to the throne) and Miss Shoda (eldest daughter of the president of a flour-milling company) are 24 years of age. This was the first time in the 2,600 years of recorded Japanese history that a future empress had been chosen from outside the ranks of the blood royal or the nobility, thereby breaking a tradition which had lasted from the time of Jimmu Tenno, the founder of the imperial line. The Emperor Hirohito is the 125th direct descendant of the Emperor Jimmu.
(Times - Manchester Guardian)

A. CHINA. — Economic Developments. - Formation of "People's Communes." - Fulfilment of First Five-Year Plan. - Revision of Second Five-Year Plan. - Decentralization Policy for Industry. - Electrification Plans. - The Yellow River Project.

A radical reorganization of the Chinese agrarian system, whereby the great majority of the agricultural co-operatives were grouped together into large "people's communes" combining agricultural, industrial, administrative, and military functions, was carried out between April and October.

Agricultural co-operatives had been formed at an increasingly rapid rate during 1954-56. Whereas in 1953 it was envisaged that only 20 per cent of all peasant households would have joined co-operatives by 1957 (see 14403 A), over 60 per cent had done so by the end of 1955, and 96 per cent a year later. Of those, 88 per cent were in co-operatives of the more "advanced" type, in which the peasant received piecework wages for his labour but no rent for his land. Experiments in the organization of larger agricultural units were already being carried out in 1957, although this was not yet official policy; in a directive issued in September of that year, the Communist Party Central Committee pointed out that many co-operatives had become so large that they included villages many miles apart, and suggested that "one village, one co-operative" should be the normal rule.

The first commune—the *Weihsing* ("Sputnik") commune—was formed in Honan province in April 1958 from 27 agricultural co-operatives. By the end of August some 10,000 such communes had been organized, incorporating over 30 per cent of China's peasantry—including the entire peasant population of the provinces of Honan, Liaoning, Hopei, Shansi, Tsinghai, Shantung, Heilungkiang, and Kwangsi.

The Communist Party leadership formally approved the "commune" movement at an enlarged session of the Politburo, held at the seaside resort of Peitaiho from Aug. 17-30 and attended by party secretaries from the provinces, autonomous regions, and larger municipalities and by leading members of party organizations in Government departments. A resolution was adopted approving the formation of communes as "a natural trend in the country's development," whilst giving a warning against undue haste in introducing more radical changes. Following this decision, the formation of communes was carried out during September at intense speed; the official New China News Agency claimed that by the end of the month 90.4 per cent of the peasantry had been organized into 23,397 communes, comprising 112,240,000 households.

The outstanding characteristics of the communes were described by the Chinese and foreign Press as follows:

(1) The communes cover large areas, each one corresponding to a *hsiang* (the group of villages which forms the smallest unit of local government). Most contain between 10,000 and 40,000 people, although some are reported to have a population as large as 300,000.

(2) In the commune in its fully developed form all land (including the small plots which form the peasants' private property in agricultural co-operatives), livestock, and tools are publicly owned.

(3) Whereas the co-operatives are concerned only with agriculture, communes are responsible for the development of small-scale local industries, including mining and steel production (see below).

(4) The commune is an administrative and military as well as an economic unit, the elected *hsiang* council being responsible for agriculture, industry, trade, banking, education, hospitals, the postal service, and the militia. The Chinese Communist magazine *Red Flag* stated on Sept. 1 that all able-bodied members of the commune would be armed and organized "along military lines," and added: "Although the organization of agricultural labour along military lines is at present for waging battles against nature and not human enemies, it is not difficult to transform one kind of struggle into another. If and when external enemies dare to attack us, the entire armed population will be mobilized."

(5) Women are released for productive work by the establishment of communal dining-halls and day nurseries and the organization of teams to perform domestic duties for the community as a whole. In some cases communal living quarters were built, in which each family was allocated separate rooms; *Red Flag* emphasized, however, that the organization of the peasantry along military lines "does not mean that they are organized in military barracks."

(6) Payment takes the form of a basic wage, which, according to the New China News Agency, is "classified into different grades according to the intensity of work"; of bonuses for workers who exceed their "norms"; of free food; and (in some communes) of free clothing and other services.

The transition to the new form of organization inevitably gave rise to serious problems.

The Politburo's resolution of Aug. 29 stated that "after the people's communes have been established there is no need for the hasty change into a system of ownership by all the people. This is a process which may be more quickly completed in some places, say in three or four years, and more slowly in other places, say in five or six years or even longer." The Peking *People's Daily* (the official Communist Party organ) similarly emphasized that "no rash attitude" should be adopted on the question of private ownership, and in many communes the peasants were left for the time being in possession of their private market gardens. The separate co-operatives often remained in existence, a supervisory committee being set up to co-ordinate their activities. As the introduction of communal feeding had encountered considerable opposition, in some communes only rice was prepared centrally, and each family cooked its other dishes and ate at home. A major source of difficulty was a tendency to transfer too much labour from agriculture to industry, and especially to iron and steel production; in October the *People's Daily* reported that grain was being lost in the fields, and instructed local officials to help the communes in planning the use of manpower.

The establishment of the communes represented a major new development in Communist theory and practice. *Red Flag* invoked the authority of Marx and Engels, who in the *Communist Manifesto* (1848) included in their suggested programme for a Communist government: "Establishment of industrial armies, especially for agriculture; combination of agriculture with manufacturing industries; gradual abolition of the distinction between town and country." In the Soviet Union experiments were made after World War II in the grouping of collective farms in "agrotowns," and Stalin in his *Economic Problems of Socialism*—published in 1952 (see 12709 A)—discussed means of "elevating collective farm property to the level of public property." Since 1953, however, Soviet policy had tended to favour the collective farmers, and the recent decision to sell State-owned agricultural machinery to them (see 16038 A) strengthened the "collective" at the expense of the "public" form of ownership. The *Manchester Guardian* commented on Sept. 11 that "Mao's own and entirely original contribution to the theory and practice of Communism is that he proposes to turn the peasantry into an industrial proletariat without urbanizing it, as both the West and Russia had to do during their own industrial revolutions."

Fulfilment of Economic Plan for 1956-57.

A report on the fulfilment of the State economic plan for 1956, which was published on Aug. 4, 1957, showed that during that year private enterprise had been virtually eliminated in industry and commerce, as well as in agriculture.

Of the total industrial output in 1956, the report stated, State industry had accounted for 54.4 per cent, joint State and private industry for 27 per cent, and co-operative industry for 17 per cent. Of retail sales, 67 per cent had been made through State enterprises and only 3 per cent through private enterprises. About 70,000 industrial enterprises, comprising 99 per cent of the employees of former private industry, and nearly 2,000,000 private shops had been transferred to joint State and private management during the year. In addition, 92 per cent of all craftsmen had been organized into 100,000 handicraft co-operatives with over 5,000,000 members.

It was claimed that gross industrial output had increased by 31 per cent over 1955; output of means of production by 41 per cent; and output of consumer goods by 22 per cent. Production figures given included 16,500,000,000 k.w.h. of electricity, 106,000,000 tons of coal, over 1,000,000 tons of crude oil, 4,700,000 tons of pig iron, 8,300,000 tons of steel and rolled steel, and 6,400,000 tons of cement. "There was a certain degree of strain," the report stated, "on the supply of heavy industrial products such as iron and steel, timber, electric power, and coal because construction outpaced them. Some consumer goods also fell short of the demand."

Investment in industry had increased by 54 per cent and investment in capital construction by 62 per cent, reaching a figure equivalent to £2,000,000,000. Work had begun or continued on 625 major industrial projects, 89 of which had been completed, and 1,200 miles of new railways, 11,000 miles of motor roads, and 50,000 miles of rough road had been built. Domestic trade had risen by 19 per cent, and average wages by 14 per cent.

On agriculture, the report stated that the crop area totalled 400,000,000 acres, an increase of 5.4 per cent, and that nearly 5,000,000 acres had been reclaimed. Mechanized State farms had cultivated an area of nearly 1,200,000 acres, an increase of 66 per cent, and possessed 4,500 tractors. Tea production had increased by 12 per cent to 125,500 tons, but cotton production had fallen by 5 per cent, adversely affecting supplies to the market. The State had provided agricultural loans totalling £480,000,000.

Details of the fulfilment of the first Five-Year Plan, which covered the period 1953-57, were published on Sept. 30, 1957.

It was stated that coal production for 1957 had nearly reached the target of 120,000,000 tons, making China the largest coal-producing country in Asia. Steel production for 1957 had so far reached 5,000,000 tons, and total steel production for the period of the plan 16,000,000 tons; in consequence, China was able to supply 88 per cent of her current steel requirements. About 67 per cent of the country's demands in machinery and equipment were now made in China, as against 20 per cent in 1936. Most of the designing for the second Five-Year Plan would be carried out by Chinese technicians, who, it was claimed, were now capable of designing metallurgical complexes of an annual capacity of 1,500,000 tons of steel, blast furnaces, thermal and hydro-electric power stations, refineries, machine-tool plants, and ships of over 10,000 tons.

The Second Five-Year Plan.

The Five-Year Plan for 1958-62, details of which had been announced in September 1956 (see 15232 A), was revised in 1957, and again repeatedly revised during 1958, the target for steel production in particular being raised three times in six months.

Revised targets for 1962 were announced on Dec. 9, 1957, by Mr. Li Fu-chun (a Vice-Premier, and chairman of the State Planning Commission) as follows (the original targets announced in 1956 are given in parentheses): steel, 12,000,000 tons (10,500,000 to 12,000,000 tons); cement, 12,500,000 tons (12,500,000 to 14,500,000 tons); electrical power, 44,000,000,000 kw.-hours (40,000,000,000 to 43,000,000,000 kw.-hours); coal, 230,000,000 tons (190,000,000 to 210,000,000 tons); grain, 240,000,000 tons (250,000,000 tons); raw cotton, 2,150,000 tons (2,400,000 tons); chemical fertilizers, 7,000,000 tons (3,200,000 tons). Mr. Li Fu-chun forecast that by 1972 China would be producing 35,000,000 to 40,000,000 tons of steel annually.

The target for steel production in 1958, which had been fixed at 6,200,000 tons, was raised in February last to 6,800,000 tons, and in May to 8,500,000 tons. At its meeting in August, however, the Politburo decided that even this figure was too low, and again raised the target to 10,700,000 tons. [Total output for 1957 was 5,900,000 tons.] The Politburo's resolution stated that the year's output of food crops was expected to be between 300,000,000 and 350,000,000 tons, and the cotton crop to be 3,500,000 tons, or double that for 1957. It continued: "This great victory in agriculture demands that industry catch up with it rapidly, and makes it possible for provincial party committees to shift the centre of their attention to industry, but without relaxing leadership in agriculture."

In order to achieve the rapid results envisaged, the Chinese Government abandoned its previous policy of relying for its industrial output primarily on large industrial complexes built with Soviet aid and requiring several years to construct. Instead, hundreds of thousands of small and medium plants were constructed all over the country; these were described by a correspondent of *The Observer* as "simply-constructed furnaces producing anything from two to 20 tons of pig-iron or carbon steel a day, and local forges and casting-shops where this metal is converted into farm tools, boilers, and even cast-iron rails for local communications." It was pointed out that the establishment of communes, which enabled labour to be transferred from agriculture to industry and released millions of women for industrial work, formed an integral part of this policy of "industrialization without towns."

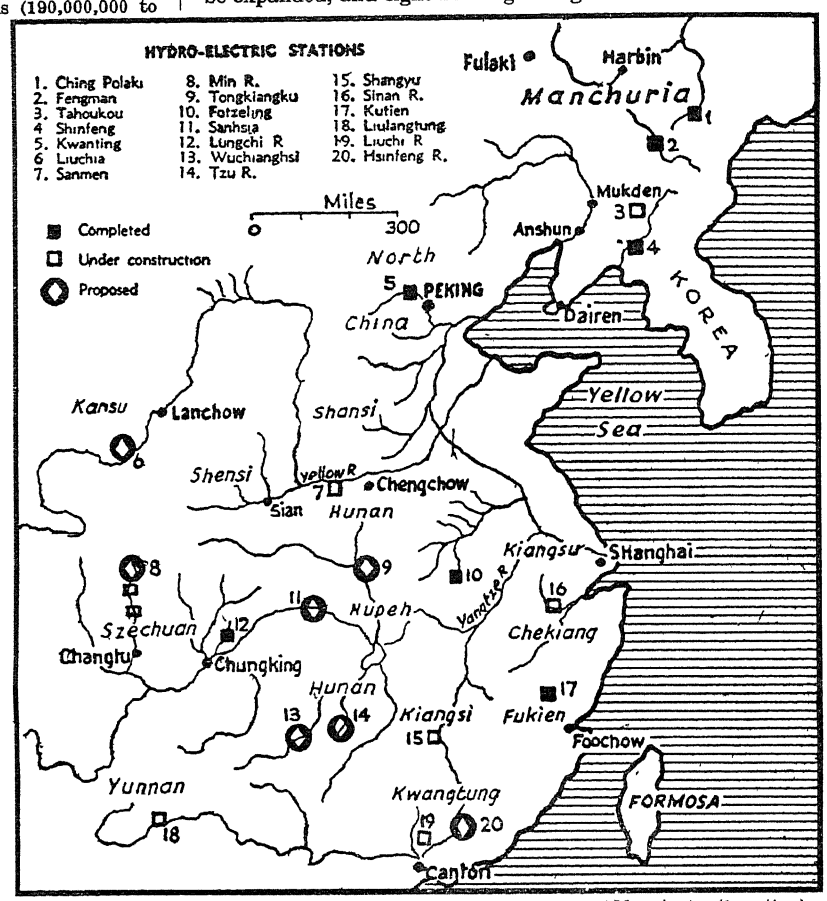
This policy had been foreshadowed by President Mao Tse-tung in his speech of Feb. 27, 1957 [see 15681 A], in which he said: "We must gradually build a number of large-scale modern enterprises as the mainstay of our industries. . . . But the majority of our enterprises should not be built in this way; we should set up a far greater number of small and medium enterprises." Reasons suggested in the foreign Press for the adoption of this policy included: (1) the speed with which small workshops could be brought into operation; (2) the fact that they released the higher-quality products of the large factories for export; (3) the desire to reduce China's economic dependence on the Soviet Union; (4) the vulnerability of large industrial complexes in the event of war.

The decentralization of industry was accompanied, from November 1957 onwards, by a decentralization of economic control comparable to that adopted in the Soviet Union six months earlier (see 15575 A). Under the new policy, the control of processing industries and certain heavy and light industries was transferred from the Central Government to local authorities. Local government bodies were also allowed to engage in trade, one-fifth of the profits being allocated to them and four-fifths to the Centre.

The New China News Agency reported on March 29, 1958, that under the new decentralization policy the four adjacent provinces of Szechwan, Shensi, Yunnan, and Kweichow had concluded an agreement whereby they would exchange services and co-operate in the construction of railways, roads, and other public works. Szechwan undertook to supply Kweichow and Yunnan with electrical machinery, lathes, equipment for producing chemical fertilizers, and certain other types of equipment; in return, Kweichow and Yunnan undertook to supply Szechwan with mining equipment and raw materials. It was stated that the four provinces would also exchange technicians, co-operate in the development of agriculture and irrigation equipment, and co-ordinate the use of manpower and materials for the building of railways, roads and waterways.

Electrification Plans. - The Yellow River Project.

The Minister for the Power Industry (Mr. Liu Lan-tao) stated on Oct. 16, 1956, that 32 major power stations, with a capacity of 70 per cent of that for the whole country in 1952, had gone into full or partial operation under the first Five-Year Plan. Owing to the demand created by industrialization, however, there was a power shortage in 21 areas, and a great network of stations using both water and thermal power was needed. Under the second Five-Year Plan the existing power network in Manchuria and the Peking-Tientsin-Tangshan region would be expanded, and eight new regional grids built.



(*Manchester Guardian*)

It was proposed that these grids should serve the following areas: (1) the Shansi-Shensi-Honan region of central China, centred on the Sanmen Dam on the Yellow River (see below); (2) the Kansu-Tsinghai region of north-west China, centred on the Liuchia Dam on the Yellow River; (3) the Kiangsu-Chekiang region of eastern China, centred on the Sinan River hydro-electric station; (4) the Yunnan region of south-west China; (5) the Hunan-Hupeh region on the middle Yangtse; (6) the Kiangsi-Kwangtung region of south-east China, which at first would draw most of its power from stations on the Shangyu and Liuchi rivers, but would probably link up with the Hunan-Hupeh grid later through stations on the Tzu River, in southern Hunan; (7) the Szechwan region, centred on eight stations to be built on the Min River, a tributary of the upper Yangtse; (8) the Sinkiang (Chinese Turkestan) region, centred on a new thermal power station at Urumchi. The eight regional grids, when completed, would be linked together into a national grid centred on the projected Sanhsia Dam on the Yangtse, which was planned to have an output of 15,000,000 kilowatts.

Work on the Sanmen Dam, in Honan, was begun on April 13, 1957. Designed by Soviet engineers, the dam is scheduled for completion in 1962 and will span a deep gorge in the middle reaches of the Yellow River, which is cut into three channels by rocky islets and in the past had been considered unnavigable at this point. When completed the dam will be over 300 feet high and 2,500 feet long, and will have a storage capacity of 910 square miles, greater than that of the Boulder and Grand Coulee dams combined. It will produce 1,000,000 kw. of electric power.

The Sanmen Dam is intended as the first stage of a long-term project which, Chinese Government spokesmen have admitted, will take "scores of years" to complete. The Yellow River, which is

3,000 miles long and whose basin is inhabited by 185,000,000 people, has changed its course 26 times and has overflowed its banks 1,500 times in the last 3,000 years, often causing appalling loss of life; in 1938 alone, for example, nearly 900,000 people were drowned in catastrophic flood disasters. The Government's project, when completed, will not only serve the purpose of flood control but is expected to produce 10 times as much electric power as the total output for the whole of China in 1954; moreover, it aims at increasing sixfold the area irrigated by the Yellow River and at opening up its entire course to navigation, so that vessels of 500 tons will be able to sail from Lanchow to the sea. In addition to the Sanmen Dam itself, the project envisages the construction of a dam in the Liuchia gorge, which will supply electric power for the Kansu-Tsinghai regional grid, and of 44 other dams.

Other Economic Developments.

Other recent developments affecting industry and agriculture are described below under cross-headings:

Oil Resources. Details were announced in April 1958 of a project for building a shale oil centre in Mowming county (in the Liuchow Peninsula, south-west Kwangtung), where it was estimated that it would be possible to produce 1,000,000 tons of petroleum annually for 100 years. The entire project, scheduled for completion by 1962, envisages an oil refinery producing high-grade petrols, diesel oil, and fuel oil, a thermal power station, machine repair worshops, and a town of 80,000 inhabitants. To make use of the by-products and provide employment for the workers' families, an ammonium sulphate factory producing 100,000 tons a month will also be established, together with other factories producing sulphates, gunny sacks, and silk yarn.

The discovery of a rich oilfield in Szechwan covering 1,500 square miles was also announced in April 1958.

Mineral Resources. A survey of the results of geological prospecting during the first Five-Year Plan, broadcast by Peking Radio on Jan. 3, 1958, claimed that China had the largest deposits of tin, tungsten, and molybdenum of any country in the world, the third largest deposits of coal (exceeded only by the Soviet Union and the U.S.A.), and the seventh largest deposits of iron ore.

Communications. Peking Radio announced on Jan. 1, 1958, the opening of a new 500-mile railway from Yingtan (Kiangsi) to the port of Amoy, and of a 3,000-ft. bridge across the Yellow River at Tungkwan (Shensi). The Yingtan-Amoy railway was the first in the mountainous province of Fukien, and linked the province with the national railway network. The Tungkwan bridge, which replaced a ferry service, linked the north-south railway through Shansi with the east-west railway from the coast to Lanchow. The reopening of the railway from Kunming (Yunnan) to Haiphong (North Vietnam), which had been closed by the Indo-China war, was announced at the same time.

Following the "rectification" campaign of 1957, thousands of "bureaucrats" (including both Government and Communist Party officials) and "rightists" were sent to work in rural areas for longer or shorter periods; thus 575 teachers engaged in higher education in Nanking, and 160 from Shanghai, were banished to the countryside for six months. Some 130,000 people in all were sent to work in agricultural co-operatives in Honan, 100,000 in Hunan, and similar numbers in other provinces. An article published in *Le Monde* (Paris) on March 7, 1958, suggested that there were two main reasons for these mass transfers of population from the town to the countryside: (1) Owing to the illiteracy of the peasants, of whom only 20,000,000 out of 500,000,000 had learned to read and write since the Communist revolution, literates were urgently needed for book-keeping and other administrative work in the agricultural co-operatives; for this reason 3,000,000 primary and secondary school pupils had been sent to work in the countryside in 1957 on completing their studies. (2) Migration to the under-populated virgin lands of Tsinghai and Sinkiang had greatly intensified during the past two years. Whereas 600,000 people were known to have migrated to the Western provinces between 1949 and 1955, about 700,000 had done so in 1956; although no official statistics were published for 1957, the figure for that year was known to be even larger.—(Times - Manchester Guardian - Observer - Le Monde, Paris - New York Times)

A. TURKEY. — Inauguration of Kemer Dam.

The Kemer dam and hydro-electric project, situated on the Akchay River in western Turkey, was formally opened on Sept. 20 by Mr. Menderes, the Prime Minister. The dam, one of the large public utility undertakings initiated by the present Government, was built by the French *Compagnie Française d'Enterprises* in co-operation with the Turkish Rar Corporation, at a cost of £T.182,000,000 ($63,700,000). It is the highest dam in Turkey (384 feet) and is designed to serve the triple purpose of preventing floods, irrigating 950,000 acres of land, and producing electricity at an annual rate of 143,000,000 kilowatt-hours. (Turkish Embassy Press Department, London)

B. UNITED KINGDOM. — Government Encouragement of Home Ownership. - Grants for Higher Building Society Advances for House-Purchasers.

A White Paper giving details of the Government's scheme to enable more people to own their homes was published on Nov. 4. It was explained that the object of the scheme was to increase the amount available for lending on mortgage by advancing Exchequer funds to building societies for re-lending to would-be house or flat purchasers; as a result of discussions with representatives of the Building Societies' Association, a scheme had been agreed which the Association believed would be acceptable to building societies generally. Details were as follows:

(1) Exchequer loans would be made available to approved building societies willing to participate in the scheme, so as to enable them to make advances of up to 95 per cent of the purchase price of certain classes of dwellings for owner-occupation.

The loans would be for a maximum of 20 years. The building societies would pay to the Exchequer interest at one-half per cent below the current rate recommended by the Building Societies' Association for mortgages on owner-occupied houses. The total amount lent by the Exchequer to any one building society would not exceed 20 per cent of its deposit and share capital.

(2) The Exchequer loans would be earmarked by building societies for advances for the purchase of private houses and flats built in the U.K. before Jan. 1, 1919, and of a value not above £2,500. Advances would be between 75 per cent and 95 per cent of the value of the property.

(3) Mortgages would be repayable over 20 years, or less if agreed, and the rate of interest charged by the building society would never exceed the rate recommended by the Building Societies' Association. The difference of one-half per cent between the rate charged to the borrower and that charged to the building society by the Treasury was intended to meet the building society's costs.

(4) As building societies already lent from their normal funds about £40,000,000-£50,000,000 a year for the purchase of pre-1919 houses, and about £330,000,000 a year for the purchase of newer houses, the new Exchequer loans for older houses would have the effect of allowing the societies to lend substantially more in respect of newer houses. It was part of the agreement that, within the limit of their enlarged resources, they should do their best to make advances of up to 95 per cent to as many purchasers of newer houses as might require them.

(5) Where the purchase price of the house or flat was higher than the valuation, the Government would provide for a "once-for-all" insurance premium to be included in the building society loan, to serve as collateral security.

(6) The scheme would be subject to review on three months' notice either by the Building Societies' Association or the Government. Any building society would be able to withdraw at any time on three months' notice, whilst the Government could terminate the whole scheme at six months' notice, to be given not earlier than 12 months after the scheme came into operation.

(7) The scheme also provided for the simplification and increased effectiveness of the existing system of improvement grants. In particular, certain standard improvements (indoor sanitation, domestic hot water, a bathroom, and a ventilated food store) would be entitled in appropriate cases to such grants within certain financial limits. Building societies would undertake to make additional loans, over and above the ordinary mortgage advance for house purchase, to enable owners to meet their share of these standard improvements.

(8) It was also proposed to enable local authorities to make advances of up to 100 per cent for house purchases for owner-occupation, if they thought fit, in place of the present statutory 90 per cent limit.

The Government's intention of encouraging home ownership had been announced in the Queen's Speech at the opening of the new session of Parliament (see 16426 A). It was stated in the White Paper that a Bill would be introduced at an early date to enable the scheme to be brought into operation.
(Cmnd. 571 - Times - Daily Telegraph - Manchester Guardian)

(Prev. rep. Queen's Speech, 16426 A.)

C. INDIA - NEPAL - UNITED KINGDOM. — Closing of Gurkha Recruiting Depots in India.

Mr. Nehru stated in the *Lok Sabha* on Aug. 25 that one of the two remaining Gurkha recruiting depots in India—that at Jalapahar, near Darjeeling—would be closed by the end of the year. A spokesman of the British Embassy in Khatmandu confirmed this on Sept. 3; he stated at the same time that the second depot, at Lehra, near Gorakhpur (Uttar Pradesh), would be closed during 1959 and moved inside Nepalese territory, and that by 1960 the entire Gurkha recruitment establishment of the British Army would be established at Dharan Bagar, in south-eastern Nepal—(Times - The Statesman, Calcutta)

(Prev. rep. 16263 C; 12488 B.)

A. UNITED NATIONS. — Second U.N. Conference on Peaceful Uses of Atomic Energy.

The second U.N. Conference on the Peaceful Uses of Atomic Energy was held at the *Palais des Nations* in Geneva from Sept. 1-14 under the presidency of Professor Francis Perrin, chairman of the French Atomic Energy Commission. The biggest scientific conference ever held, it was attended by some 2,000 experts from 69 countries and nine U.N. specialized agencies, plus an estimated 3,000 observers from various organizations, commercial firms, and academic institutions.

The participating countries were: Argentina, Australia, Austria, Belgium, Brazil, Bulgaria, Burma, Byelorussia, Canada, Ceylon, Chile, China (Nationalist), Colombia, Cuba, Czechoslovakia, Denmark, Dominican Republic, Ecuador, El Salvador, Ethiopia, Finland, France, German Federal Republic, Ghana, Greece, Guatemala, the Holy See, Hungary, Iceland, India, Indonesia, Iraq, Irish Republic, Israel, Italy, Japan, Korea (South), Lebanon, Luxemburg, Mexico, Monaco, Morocco, Netherlands, New Zealand, Norway, Pakistan, Persia, Peru, Philippines, Poland, Portugal, Rumania, Siam, South Africa, Soviet Union, Spain, Sweden, Switzerland, Tunisia, Turkey, Ukraine, United Arab Republic, United Kingdom, United States, Uruguay, Venezuela, Vietnam (South), Yemen, and Yugoslavia.

The following specialized agencies were represented: the International Labour Organization (I.L.O.), the Food and Agriculture Organization (F.A.O.), the U.N. Educational, Scientific, and Cultural Organization (Unesco), the World Health Organization, the International Bank, the International Finance Corporation, the International Civil Aviation Organization (I.C.A.O.), the World Meteorological Organization, and the International Atomic Energy Agency.

Simultaneously with the conference itself, an official 20-nation exhibition illustrating the peaceful uses of atomic energy was held in the grounds of the *Palais des Nations*, while the Swiss authorities arranged a commercial exhibition which was held in the centre of Geneva.

Participating countries in the 20-nation exhibition included the U.S.A., Soviet Union, United Kingdom, France, Italy, Japan, and India. The exhibition was dominated by the American and Soviet exhibits, which included models of the latest types of apparatus used in both countries for purposes of controlled thermo-nuclear research. The British section included scale models of the ZETA and SCEPTRE apparatus, and—for the first time—a model of a device (MINNI) used at Aldermaston for producing neutrons from "pinched" discharges in heavy hydrogen. [The Aldermaston apparatus used for this purpose is known as MAGGI, of which MINNI was a replica on a scale of one-third.]

Some 350 British firms exhibited in the commercial exhibition, which was dominated by the U.K. section; they included exhibits from chemical concerns, scientific instrument makers, and firms engaged in metallurgical and other aspects of nuclear engineering. The U.K. Atomic Energy Authority traced the history of nuclear power development in Britain from the first reactor at Harwell, through GLEEP, BEPO, Windscale, and Calder Hall, to the present stage at Berkeley, Bradwell, Hunterston, and Hinkley Point—the four large nuclear power stations at present under construction—see page 16502, first column.

Over 2,000 scientific papers were submitted at the conference by specialists from the Governments and specialized agencies represented, of which some 650 were presented orally. Nearly 100 papers dealt with the subject of fusion—the production of electric power by utilizing the energy of the hydrogen bomb. In another major field, many papers were presented reviewing experiences with nuclear fission reactors. Other major topics on which papers were read and discussions held included the use of nuclear energy to heat homes and propel ships and aircraft, and the applications of nuclear research in the study and treatment of diseases, the improvement of crops, and the speeding-up of industrial processes.

One of the most important developments at the conference was a joint Anglo-American announcement, followed closely by a similar Russian announcement, that the United States, the United Kingdom, and the Soviet Union had decided to declassify—i.e. to remove security restrictions from—their research programmes on controlled thermo-nuclear (fusion) reactions. Another feature of the conference was the amount of information—much of it made available for the first time—on the progress of atomic research and development in the U.S.S.R., in which connexion it was disclosed that the world's largest reactor had gone into operation in Siberia. These and other important matters discussed at the conference are summarized below under cross-headings:

Anglo-American Co-operation in Thermo-nuclear Research.

The decision of the U.K. and U.S. Governments to declassify their work on controlled thermo-nuclear reactions was announced jointly at Geneva on Aug. 30 by Sir John Cockcroft and Mr. Lewis L. Strauss, the respective leaders of the British and American delegations.

A corresponding statement was issued in London by the U.K. Atomic Energy Authority, which explained (1) that there had been a complete exchange of information in this field between the two countries since 1956; (2) that the declassification would "make possible a free flow of information between scientists in the U.S.A. and the U.K. and those of other countries", (3) that, when the necessary administrative arrangements were completed, "this declassification action will also make it possible for scientists from other countries to pursue studies at some of the research centres at which work on controlled thermo-nuclear energy is being performed"

The A.E.A. added: "The practical goal of the research programme is the generation of useful amounts of electrical energy through the fusion of nuclei of the lighter elements. Declassification of the programme is expected to facilitate the attainment of the goal. . . ." Several different research approaches have been followed [in Britain and the U.S.A.] and a variety of experimental devices have been constructed. Considerable progress has been made, but the attainment of useful power from controlled fusion reactions may still require many years of sustained effort."

[The Anglo-American statement meant, for example, that work such as that on ZETA at Harwell would no longer be considered confidential.]

Soviet Progress in Nuclear Science. - Construction of World's Biggest Reactor in Siberia.

The leader of the Soviet delegation (Professor V. S. Emelyanov) similarly announced on Sept. 1 that the U.S.S.R. was declassifying all work on controlled thermo-nuclear reactions; he accordingly presented to the conference four volumes comprising over 100 papers on this and related fields of research, containing an account of all such work carried out in the Soviet Union from 1951 onwards.

In the course of his speech Professor Emelyanov disclosed that Russia's first nuclear power station, started four years ago in the Moscow area, was being supplemented by a second station at Voronezh (already in operation) and two more to be built in the Leningrad area and the Urals. He also stated that the U.S.S.R. had many experimental reactors (including a fast reactor of 250,000 kw.), as well as many small and mobile power stations of 2,000 kw.; that two of the Soviet reactors were running on plutonium; that it was intended to develop a reactor small enough for use in ships; and that the U.S.S.R. had plans to produce 2,500,000 kw. of atomic electricity by 1960. Without going into details, Professor Emelyanov said that Soviet work on controlled thermo-nuclear reactions was "well under way," and showed a picture of a device similar to the British ZETA apparatus.

On Sept. 8 the Soviet delegation announced that the world's largest atomic power station—a 100,000-kilowatt plant—had gone into operation on the previous day "somewhere in Siberia," using 200 tons of natural uranium as fuel. A similar announcement was issued in Moscow by the Tass Agency, which did not give the location of the plant. The *New York Times* correspondent covering the conference (Mr. John Finney) sent the following despatch from Geneva:

"In size—if not in technology—the [Siberian] power plant outranks the largest atomic reactors now in operation in the United States and Britain. The largest atomic power station in the U.S.A. is the Shippingport plant, that started generating 60,000 kilowatts of electricity in December [see 16017 B.] On the second fuel loading, the capacity of the plant will be raised to 100,000 kilowatts. Britain has three reactors in operation, each with a capacity of 40,000 kilowatts.

"The Soviet delegation presented a colour movie showing scenes of the plant. . . . As seen in the movie, the Soviet reactor is a huge installation with a multiplicity of control panels and a massiveness in engineering detail seldom seen in comparable Western plants. According to the Soviet delegation, the reactor is but one of six that will be built to enable the power station to produce 600,000 kilowatts of electricity—enough to supply a city of 600,000 persons. The Soviet reactor uses natural uranium as fuel, graphite as a moderator, and ordinary water as a coolant to produce the steam to turn the electrical turbines."

British Lead in Atomic Power Generation. - Sir John Cockcroft's Review of World Progress in Atomic Research.

In a speech at the conclusion of the conference, Sir John Cockcroft said that Britain was leading the world in atomic generators and had "a much more ambitious practical power programme in hand than any other single country"; in other fields of atomic energy, e.g. in radio-isotopes, Britain had also "established a leading position." Among the points made by Sir John Cockcroft were (1) that nuclear power costs in Britain were expected to fall well below conventional costs by the late 1960s; (2) that there was general agreement that by 1975 most new power stations would be nuclear; and (3) that fusion power was likely to be achieved long before uranium supplies were exhausted.

Sir John said that the capital costs of U.K. power stations would fall a further 20 per cent by 1962 as the output from a station went up from 300 megawatts to 500 megawatts; a further fall of at least 10 per cent was expected from straightforward engineering developments and increase of output. Nuclear fuel costs, the second

important component of general costs, should in all cases be lower than conventional costs. The 500-megawatt station to be completed in 1962 was expected to achieve parity with coal-fired stations in areas of Britain away from the coalfields. By the late 1960s new types of stations might be coming into service.

Reviewing world progress in the three years since the first "atoms-for-peace" conference, Sir John Cockcroft said that this period had been notable for the coming into operation of the world's first large-scale nuclear power stations at Calder Hall (U.K.), Shippingport (U.S.A.), and in Siberia (U.S.S.R.). Moreover, the technical feasibility of nuclear propulsion of shipping had been abundantly demonstrated by the trans-polar voyage of the U.S. submarine *Nautilus* [see 16329 A]; the U.S. passenger-cargo ship *Savannah* [see 16202 C] would come into service in 1960; and the Russian icebreaker *Lenin* [see 15908 C] would be commissioned in 1959. In contrast with the hopeful outlook for marine propulsion, nuclear propulsion of commercial aircraft seemed "much farther away."

Sir John stated that the papers presented to the conference on fusion (controlled thermo-nuclear) research had shown that "remarkable progress is being made in this field on a very broad front." Most workers had in view the long-term objective of attaining temperatures of 50 to 100 million degrees in a mixture of deuterium and tritium gas; this should enable the "break-even" point to be reached at which the energy release from fusion reactions in a mixture of deuterium and tritium gas would equal the energy input. The long-term goal was to go well beyond the 100 million degrees, to use the deuteron reaction, and eliminate dependence on lithium as a source material for tritium.

East-West Collaboration in Nuclear Research.

Offers of East-West collaboration in future nuclear research were made during the conference by Dr. L. A. Artsimovich, of the Soviet Union, and Dr. Edward Teller, of the United States.

Dr. Artsimovich stressed the importance of discussing the results of research on an international scale, adding that its importance was "greater than that of the separate investigations, which have not yet brought us very much nearer to our ultimate goal." Dr. Teller expressed full agreement with this point of view.

Dr. Glenn T. Seaborg (U.S.A.) spoke of the work being done in Moscow on the creation and identification of artificial elements by a team of scientists led by Dr. G. N. Flerov. He pointed out that it was complementary to similar studies at the University of California's radiation laboratory, and suggested that there should be close collaboration between the Moscow and California laboratories in this field of research.

Non-Military Uses of Underground Explosions.

In a report on the possible non-military uses of nuclear or thermo-nuclear explosions, Mr. G. W. Johnson (United States) estimated that, for example, a one-megaton explosion could free the equivalent of some 60,000,000 barrels of oil from underground tar sands; moreover, such explosions could break up mining ores, free great reserves of oil shale, and create sites for harbours and dams that had so far been "an expensive dream." After describing an experimental kiloton fission explosion in the U.S.A. in 1957, fired 300 metres below the surface, Mr. Johnson said that there was an "exciting possibility" that energy from underground thermo-nuclear explosions might be used to produce steam and thus generate electricity.

Professor Emelyanov (U.S.S.R.) said that his Government were opposed to all nuclear or thermo-nuclear explosions, whatever their purpose, and had no programme for the peaceful use of such explosions.

Nuclear Propulsion.

The Soviet delegation gave full details of the atomic-powered icebreaker *Lenin* (see 15908 C), while the French and Japanese delegations gave details of nuclear-propelled vessels which were either under construction or projected in their countries. The U.S. delegation gave no information about the *Savannah* other than that previously released.

The French delegation stated that studies had been put in hand by such shipbuilding firms as the *Chantiers de l'Atlantique* and the *Société du Creusot* with a view to building a nuclear-powered oil tanker of 40,000 tons to trade between France and the Persian Gulf via the Cape. The vessel would be powered either by a pressurized-water reactor, a boiling-water reactor, or a gas reactor—the question being at present under study.

The Japanese delegation gave details of a projected 20,000-ton nuclear-powered passenger vessel, designed primarily for service between Japan and South America, and also for round-the-world voyages. Designed by the Mitsubishi Company for the *Osaka Chosen Kaisha* line, it would have a pressurized reactor generating 180 megawatts. It was disclosed that the Japanese Atomic Energy Commission was also studying a long-term programme for construction of nuclear-powered ships.

Proposed Safety Code against Radiation Hazards.

The conference devoted much attention to the need to prevent radio-active contamination as a result of the growth of nuclear industries. In this connexion the leader of the Netherlands delegation (Professor Johan de Boer) presented a number of recommendations for an international safety code to protect the public from radio-active hazards.

The recommendations, drawn up by the Royal Netherlands Academy of Science, laid special emphasis on the need for atomic safety regulations in Western Europe, where many highly-industrialized and densely-populated countries had large-scale programmes for the development of atomic power—e.g. Great Britain, France, Western Germany, Belgium, the Netherlands, and Denmark. Because of the proximity of these countries, radioactive hazards in any one of them might "easily cross one or more territorial frontiers, thereby causing international problems"; such hazards might arise from the normal release of radio-activity from power plants, or from accidents involving reactors, nuclear-powered ships, or trains, trucks or aircraft transporting nuclear materials. It was therefore urged that the Western European countries should take the lead in drawing up a "safety code"

Discovery into Behaviour of Pi- and Mu-Mesons.

It was announced during the conference that an international team of scientists, working with the recently-commissioned cyclotron at the European Centre for Nuclear Research (CERN), had succeeded in solving a problem of nuclear physics which had baffled scientists for many years—namely, the behaviour of the particles known as pi-mesons and mu-mesons.

The pi-meson is an unstable particle which in the normal way breaks down into a lighter and still more unstable particle known as a mu-meson, which in turn breaks down into an electron. To satisfy the conclusions of theoretical physics, it had been held that one in about every 100,000 mesons should break down directly into an electron. Not only had this manner of breaking down never been observed, but experiments had been carried out to show that it did not in fact happen. As a result of the CERN experiments, however, 42 cases of this type of breakdown were observed—the proportion being about one in 20,000. The discovery was made by a five-man team of Italian, British, Austrian and U.S. scientists working under Professor Gilberto Bernardini (Italy).

Publication of Conference Proceedings.

The proceedings of the conference will be published by the United Nations in 33 volumes, each averaging 500 pages and giving the complete text of the 2,135 papers presented, together with all charts, diagrams, and other illustrative material. Because of the magnitude of the task—one of the biggest publishing ventures ever undertaken—15 volumes will be published in Britain, eight in France, four in Switzerland, four in Canada, and two in the United States. The complete text (running to 17 million words) will be in English, whilst abridged volumes will be published in French, Spanish, and Russian.

Second Atoms for Peace Award.

It was announced in New York on Nov. 26 that the second Atoms for Peace Award had been won by the Hungarian-born scientist Professor George Charles de Hevesy, who had been unanimously selected from 111 nominations representing 19 countries. The Award—of $75,000 (£27,000) and a gold medallion—was made to Professor de Hevesy for his "basic contribution to the peaceful uses of atomic energy in the discovery and development of tracer techniques in chemistry, biology, and medicine, using natural and artificial radio-active isotopes for his continuing work in these fields."

Professor de Hevesy collaborated with the late Professor Paneth in working out the techniques of using radio-active isotopes for research at a time when only a few of these isotopes were known. A Nobel prizewinner for Chemistry, he worked at one time in England with the late Lord Rutherford and has been honoured by the Royal Society. He has lived in Sweden for many years.

The Atoms for Peace Award was instituted by the Ford Motor Company, which set aside a sum of $1,000,000 for the purpose. The first recipient of the award was Professor Nils Bohr, the Danish scientist (see 15480 D), in October 1958.
(U.N. Information Centre, London - United Nations Review, New York - Times - Daily Telegraph - Manchester Guardian - Le Monde, Paris - Soviet Embassy Press Department, London - New York Times - Neue Zürcher Zeitung) **(Prev. rep. First Atoms-for-Peace Conference, 14416 A.)**

A. UNITED KINGDOM. — O.M. for Lord Samuel.

At a ceremony at Buckingham Palace on Nov. 21 H.M. the Queen conferred the Order of Merit on Viscount Samuel (88), the veteran Liberal statesman, on the 50th anniversary of the date on which he was sworn as a member of the Privy Council. The only other Privy Councillor with a record of 50 years' service is Sir Winston Churchill.

The Order of Merit is in the personal gift of the Sovereign and is limited to 24 members. There had been two vacancies in the Order caused by the recent deaths of Dr. Vaughan Williams, the composer, and Professor G. E. Moore, the philosopher.—(Times) **(Prev. rep. O.M. Awards, 16289 A.)**

A. UNITED STATES. — Democratic Victory in Congressional and Gubernatorial Elections.

Elections were held in the United States on Nov. 4 for 33 Senate seats (approximately one-third of the Senate's membership), a new House of Representatives, and 32 State Governorships. They were completed on Nov. 25 by elections in Alaska (the 49th State of the Union) for two senators, one member of the House of Representatives, and a State Governor.

The congressional and gubernatorial elections resulted in a sweeping victory for the Democratic Party, which won its biggest majorities in both Houses of Congress since the "New Deal" days of the 1930s, and also increased its control of State Governments. The Democrats gained ground in all parts of the country, particularly in the Middle West, California, and New England.

The Senate Elections.

As a result of Alaska's admission to the Union, the new Senate has 98 members instead of 96 as hitherto. Thirty-three of the 98 seats were contested on Nov. 4, one senator had been elected in Maine in September (see 16436 A), and the two Alaskan senators were elected on Nov. 25; of the 62 incumbent senators (i.e. those who were not up for re-election), 32 will serve until Jan. 3, 1963, and 30 until Jan. 3, 1961.

Of the 33 seats contested on Nov. 4, the Democrats won 25 and the Republicans eight. Including the earlier Maine result, the Democrats won 13 seats from the Republicans—one each in California, Connecticut, Indiana, Maine, Michigan, Minnesota, Nevada, New Jersey, Ohio, Utah, and Wyoming, and two in West Virginia—whilst the Republicans failed to win a seat from the Democrats. As a result of the elections of Nov. 4, and the Alaskan elections of Nov. 25 (in which two Democratic senators were returned), the Senate membership in the new (86th) Congress will be as follows, showing comparison with party strengths in the former (85th) Congress:

	New Senate	*Old Senate*
Democrats	64	49
Republicans	34	47

The Democratic Party will thus have a majority of 30 in the new Senate, compared with only two in the former Senate.

Of the two Alaskan senators, Mr. E. L. Bartlett had been Alaska's non-voting member in the House of Representatives since 1944, while Mr. Ernest Gruening was Governor of the territory from 1939 to 1952. Mr. Gruening defeated Mr. Michael Stepovich, who resigned the Governorship of Alaska to contest one of the Senate seats.

Outstanding Democratic successes were achieved in California, where Mr. Clair Engle defeated Governor Goodwin J. Knight (Republican) by 500,000 votes; in Ohio, where Mr. Stephen M. Young had a majority of 165,000 over Senator John W. Bricker, who had held the seat for the Republicans since 1936; in Indiana, where Mr. R. Vance Hartke became the first Democratic senator for the State in 20 years (replacing Senator William E. Jenner, Republican, who retired); in New Jersey, where Mr. Harrison A. Williams jr. won the seat vacated by Senator H. Alexander Smith (Rep.) and became the first Democratic senator for the State since 1936; and in West Virginia, where Mr. Robert C. Byrd and Mr. Jennings Randolph unseated the two former Republican senators, Chapman Revercomb and John D. Hoblitzell. Other former Republican senators to lose their seats included George W. Malone in Nevada, Edward Martin in Pennsylvania, Charles E. Potter in Michigan, and Arthur V. Watkins in Utah.

In California, Mr. William F. Knowland (Republican leader in the former Senate) stood for the State Governorship [see below], whilst the former Governor, Mr. Goodwin J. Knight, was Republican candidate for the Senate seat previously held by Mr. Knowland. As stated above, the seat vacated by ex-Senator Knowland was won by the Democratic candidate, Mr. Clair Engle.

Among prominent Democratic senators retaining their seats were Mr. John F. Kennedy, re-elected in Massachusetts with a majority of nearly 500,000; Mr. Stuart Symington, re-elected in Missouri with a majority of 300,000; and Mr. William Proxmire, who was first elected in Wisconsin in 1957 to fill the unexpired term of the late Senator Joseph R. McCarthy (see 15743 A), and who was re-elected with a majority of 168,000—the first time a Democratic senator had won re-election in Wisconsin.

The biggest Republican success was in Arizona, where Senator Barry Goldwater increased his majority fivefold as compared with 1952. In the traditionally Republican prairie States, Senator William Langer was re-elected in North Dakota and Senator Roman L. Hruska in Nebraska. In New York State, Mr. Kenneth B. Keating (formerly a member of the House of Representatives) was elected for the Republicans with a majority of 100,000, in the contest for the seat vacated by his Republican predecessor, Senator Irving M. Ives.

House of Representatives.

Including the member elected for Alaska on Nov. 25 (a Democrat), and the three members elected for Maine in September, the composition of the new House of Representatives was as follows, showing comparison with party strengths in the former House:

	*New House**	*Old House†*
Democrats	283	235
Republicans	153	200

The Democrats thus increased their House majority from 35 to 130—their biggest margin since the Roosevelt "landslide" of 1936.

* The Democratic total of 283 includes an Independent Segregationist elected in Arkansas, who will vote with the Democrats.

† There were eight vacancies at the dissolution of the former House, five of the seats having been held by the Republicans and three by the Democrats; they are attributed to the two parties.

Among outstanding Democratic successes were the election of a Democratic congressman in Vermont for the first time in 108 years (Vermont has one member in the House); a "clean sweep" in Connecticut, where all six seats were won from the Republicans; the winning of eight of the 11 seats in Indiana, where the Democrats held only two seats previously; and comparable gains in California, Illinois, Maryland, and Pennsylvania. Democratic gains were particularly marked in areas affected by the economic recession earlier in the year—e.g. in Indianapolis and South Bend (Ind.), two cities particularly hit during the recession. Whereas the Democrats made 46 net gains from the Republicans, the latter gained only one seat from the Democrats—in Minnesota.

The principal House leaders on both sides were re-elected, including Representative Sam Rayburn (Dem.), Speaker of the House, who was returned unopposed in Texas; Representative John W. McCormack (Democratic floor leader), returned unopposed in Massachusetts; and Representative Joseph W. Martin jr. (Republican floor leader), re-elected in Massachusetts.

State Governorships.

Of the 32 State Governorships contested on Nov. 4, the Democrats won 24 (nine gains from the Republicans) and the Republicans won eight (four gains from the Democrats)—a net Democratic gain of five. The Governorships won by the Democrats from the Republicans were those of California, Maryland, Nebraska, Nevada, New Mexico, Ohio, South Dakota, Wisconsin and Wyoming, while the Republican gains were in Arizona, New York, Oregon and Rhode Island. The Democrats had previously won the Governorship of Maine from the Republicans in September, while Alaska elected a Democratic Governor on Nov. 25. Taken as a whole, therefore, the gubernatorial contests (including those in Maine and Alaska) resulted in the election of 26 Democratic and eight Republican State Governors. Together with the 15 incumbent Governors (nine Democrats and six Republicans) who were not up for re-election, 35 of the 49 States have Democratic Governors and 14 States have Republican Governors.

A feature of the gubernatorial elections was the Republican success in New York State, where Mr. Nelson A. Rockefeller won the Governorship from Mr. Averell Harriman (Democrat) in what the U.S. press described as the "battle of the millionaires." Mr. Rockefeller polled 3,117,864 votes against Mr. Harriman's 2,560,802—a Republican majority of 557,062.

Mr. Harriman obtained a majority in New York City, where he polled 1,322,553 votes against Mr. Rockefeller's 1,011,032; in "upstate" New York, however, Mr. Rockefeller polled 2,106,832 votes against Mr. Harriman's 1,238,249, thus emerging as the winner in the State as a whole. In the five boroughs of New York City, Mr. Harriman had majorities in Manhattan, Bronx, and Brooklyn, and Mr. Rockefeller in Queens and Richmond.

In California, Mr. Edmund (Pat) Brown—the State Attorney-General—became the second Democratic State Governor of the century by defeating ex-Senator William F. Knowland by nearly 1,000,000 votes. (As stated above, Mr. Knowland resigned his Senate seat to contest the gubernatorial election). In Ohio, Mr. Michael V. DiSalle (the former Federal Price Stabilization Administrator) won the State Governorship for the Democrats for the first time in 20 years, defeating Mr. C. William O'Neill (the incumbent Republican Governor) by 400,000 votes—about the same margin by which Mr. O'Neill beat Mr. DiSalle two years earlier.

Nearly all Democratic Governors standing for re-election were returned with large majorities, including Governor Orval E. Faubus in Arkansas.—(New York Times - N.Y. Herald Tribune)

NOVEMBER 29—DECEMBER 6, 1958

A. SOVIET UNION - WESTERN POWERS. — Soviet Notes to Britain, U.S.A. and France on proposed Free City Status for West Berlin. - Six-months' Time Limit set for Four-Power Agreement on Berlin.

As stated on page 16508 (second column) the Soviet Government presented identical Notes to the British, U.S. and French Governments on Nov. 27 concerning the proposed "Free City" status of West Berlin, and stating that the U.S.S.R. intended to transfer all its occupation powers in Eastern Germany to the East German Government if a Four-Power agreement had not been reached within six months. The summarized text of the Note to the U.S. Government ran as follows :

"The question of Berlin, which lies in the centre of the German Democratic Republic but the western part of which is severed from the German Democratic Republic as a consequence of foreign occupation, profoundly affects not only the national interests of the German people but also the interests of all peoples wishing to establish a lasting peace in Europe. There, in the historic capital of Germany, two worlds are in direct contact and barricades of the 'cold war' exist at every step. A situation of constant friction and tension has prevailed for many years in the city, which is divided into two parts. Berlin, which witnessed the greatest triumph of the joint struggle of our countries against fascist aggression, has now become a dangerous centre of contradictions between the great Powers which were allies in the last war. Its role in the relations between the Powers can be compared with a slow-burning fuse leading to a barrel of gunpowder. . . . This is the dismal finale, reached after 13 post-war years, to the once joint concerted policy of the four Powers—the U.S.S.R., the U.S.A., the United Kingdom, and France -towards Germany. . . .

"The Governments of the four Powers solemnly pledged themselves to extirpate German militarism and Nazism, to prevent for ever their resurgence, and to take all measures to ensure that Germany would never again threaten its neighbours or the maintenance of world peace. . . . The Potsdam Agreement contained important provisions whereby Germany was to be regarded as a single economic whole during the occupation period. The Agreement also envisaged the setting-up of central German administrative departments. The Council of Foreign Ministers, set up by decision of the Potsdam conference, was instructed to prepare a peace settlement for Germany. . . .

"However, further developments did not take the direction laid down at Potsdam. The relations between the U.S.S.R. and the three Western Powers increasingly deteriorated and mutual distrust and suspicion increased, which now have developed into unfriendly relations.

"The Soviet Government sincerely hoped that after the victorious war it would be quite possible, notwithstanding the inevitability of ideological differences, to continue the fruitful co-operation between the Great Powers that headed the anti-Hitlerite coalition on the basis of sober recognition of the situation created by the war. The policy of the Western Powers, however, was increasingly influenced by forces hating Socialist and Communist ideas, but concealing during the war their schemes hostile to the Soviet Union. . . . The signal for this was given to the United States and other Western countries by Winston Churchill in his notorious Fulton speech in March 1946. . . .

"The ideological struggle has never died down and it will continue, inasmuch as different views are held on the system of society. But the pronouncements of Winston Churchill and his associates unfortunately influenced the minds of other Western statesmen, with most regrettable consequences. Government agencies and armed forces joined in the heated ideological struggle. The results are universally known : instead of the expansion of co-operation between the great Powers, the world has split into antagonistic military alignments. Competition began in the manufacture and stockpiling of atomic and hydrogen weapons In other words, war preparations were launched.

". . . The first violation of the Potsdam Agreement was the refusal of the United States, Great Britain, and France to honour their commitments . . . concerning the transfer to the Soviet Union of the agreed amount of industrial equipment from Western Germany as partial compensation for the destruction and damage caused to the national economy of the U.S.S.R. by Hitlerite Germany.

"But that was not all. The Governments of the United States and Great Britain, with every passing year, further abandoned the principles underlying the Potsdam Agreement. The same road was followed by France, which, though she acceded to the Potsdam Agreement later, cannot disclaim her share of responsibility for the fulfilment of that agreement. . . .

"It is evident that the bitter lessons of the war have been lost on some Western statesmen who are again dragging out the notorious Munich policy of instigating German militarism against the Soviet Union, their recent comrades-in-arms. The legitimate question arises : Can the inspirers of the present policy of the Western Powers toward Germany guarantee that German militarism, which they have nurtured, will not attack its present partners again and that the American, British, and French peoples will not have to pay with their blood for the violation by their Governments of the Allied agreements on the development of Germany along a peace-loving and democratic road ? Hardly anyone can give such a guarantee. . . .

"At the moment the United States, Britain, and France are opposed, as follows from their Notes of Sept. 30 [see page 16505, second column], to the latest proposals for a peaceful settlement with Germany put forward by the Soviet Union and the German Democratic Republic, although making no proposals of their own on this subject, just as they have made none throughout the post-war period. . . . The result is a vicious circle : the United States is objecting to the drafting of a German peace treaty by referring to the absence of a united German State, while at the same time hampering the reunification of Germany by rejecting the only feasible opportunity of solving this problem through agreement between the two German States . .

"However, the absence of a peace treaty cannot be an excuse for attempting to maintain the occupation régime in Germany. Occupation of Germany has long become a thing of the past, and any attempts to prevent the disappearance of the special rights of foreign Powers in Germany are becoming a dangerous anachronism. . . . At one time the agreement on the quadripartite status of Berlin was an equal agreement concluded by the four Powers in the name of peaceful and democratic goals which were later to become known as the Potsdam Principles. . . . Now that the Western Powers have begun to arm Western Germany, and to turn her into an instrument of their policy spearheaded against the Soviet Union, the very essence of the Allied agreement on Berlin has vanished. . . .

"Thus a patently absurd situation has arisen where the Soviet Union is supporting and maintaining, as it were, favourable conditions for activities of the Western Powers directed against the U.S.S.R. and its Warsaw Treaty allies. It is only natural that the Soviet Union, just as the other parties to the Warsaw Treaty, cannot tolerate this state of affairs any longer. . . . The Soviet Government can no longer consider itself bound by that part of the Allied agreements on Germany which has assumed an unequal character and is being used for the maintenance of the occupation régime in West Berlin and for interference in the internal affairs of the German Democratic Republic.

"In view of this, the Government of the U.S.S.R. notifies the Government of the United States that the Soviet Union regards as null and void (1) the 'Protocol of the agreement between the U.S.S.R., the United States, and the United Kingdom on the occupation zones of Germany and the administration of Greater Berlin,' dated Sept 12, 1944 ; and (2) the associated supplementary agreements, including the agreement on the control mechanism in Germany concluded between the U.S.S.R., the United States, Great Britain, and France on May 1, 1945—that is the agreements which were to be effective during the first years after the surrender of Germany. . .

"Of all the Allied agreements on Germany there is, in fact, only one which is complied with to-day. It is the agreement on what is known as the quadripartite status of Berlin. Basing themselves on this status, the three Western Powers are ruling the roost in West Berlin, making it a sort of a State within a State, and using West Berlin as a centre from which to pursue subversive activity against the German Democratic Republic, the Soviet Union, and the other parties to the Warsaw Treaty.

"The United States, Britain, and France are freely communicating with West Berlin through lines of communication passing through the territory and airspace of the German Democratic Republic, which they do not even recognize. . . . In other words, the three Powers are demanding the preservation for their own sake of the occupation privileges based on the quadripartite agreements, which they have themselves flouted. . . .

"Those who have grossly violated these agreements have lost the right to preserve their occupation régimes in Berlin or any other part of Germany. Besides, is it indeed possible to insist on occupation régimes being maintained in Germany, or any part of Germany, more than 13 years after the end of the war ? Every occupation is an event of limited duration, as explicitly stipulated in the quadripartite agreements on Germany.

"The fact that Germany still has no peace treaty is above all the fault of the United States, Britain, and France, which have never seemed to like the idea of drafting such a treaty. The Governments of the three Powers reacted negatively to every approach the Soviet Government made to them regarding the preparation of a peace treaty with Germany.

"The Soviet Government will enter into negotiations with the Government of the German Democratic Republic at an appropriate moment with a view to transferring to the G.D.R. the functions which the Soviet authorities exercised temporarily in virtue of the above-mentioned Allied agreements, as well as in accordance with the agreement of Sept. 20, 1955, between the U.S.S.R. and the German Democratic Republic.

"The best way to solve the Berlin question would be to take a decision based on the enforcement of the Potsdam Agreement on Germany. In the present circumstances, this would mean the withdrawal of the German Federal Republic from NATO and the simultaneous withdrawal of the German Democratic Republic from the Warsaw Treaty Organization. Should the U.S. Government be unwilling to contribute in this way to the implementation of the basic political principles of the Allied agreements on Germany, it will have no reason, either legal or moral, for insisting on the preservation of the quadripartite status of Berlin.

"There may, of course, be some ill-wishers of the Soviet Union who will try to read an annexationist aim into the Soviet Government's position with regard to Berlin. The U.S.S.R. does not seek any conquests. All it wants is to put an end to the abnormal and

dangerous situation which has developed in Berlin. The ending of the legally unjustified occupation of West Berlin would do no harm either to the United States, Great Britain, or France. It would, on the contrary, go far towards improving the international atmosphere in Europe. . . .

"The Soviet Government considers that upon the ending of foreign occupation, the population of West Berlin should be given the right to establish a way of life of their own choice. Should the inhabitants of West Berlin desire to preserve the present way of life, based on private capitalist ownership, it is up to them to do so. The U.S.S.R. will respect any choice the West Berliners may make.

"On the strength of all these considerations, the Soviet Government considers it possible for the question of West Berlin to be settled for the time being by making West Berlin an independent political entity—a free city—without any State, including either of the existing German States, interfering in its life. It might be possible, in particular, to agree to the territory of the Free City being demilitarized and having no armed forces in it. The Free City of West Berlin could have its own Government and could run its own economy, administrative and other affairs. The four Powers which shared in the administration of Berlin after the war could, like both German States, undertake to respect the status of West Berlin as a Free City. . . . The Soviet Government would have no objection to the United Nations also sharing, in one way or another, in observing the Free City status of West Berlin.

"It is obvious that the question would arise of some kind of an arrangement with the German Democratic Republic concerning guarantees of unhindered communications between the Free City and the outside world. In its turn, West Berlin would commit itself not to tolerate on its territory hostile subversive activity directed against the German Democratic Republic or any other State.

"This solution of the problem of the status of West Berlin would be an important step towards normalizing the situation in Berlin, which, instead of being a hotbed of unrest and tension, could become a centre for contacts and co-operation between both parts of Germany. . . .

"The Soviet Union declares that it will do its utmost to promote the attainment of these aims, especially by placing orders for such an amount of manufactured goods as would fully ensure the stability and prosperity of the economy of the Free City, and also by regular supplies to West Berlin of the necessary raw materials and foodstuffs on a commercial basis. . . . Thus the population of West Berlin, far from suffering from the abolition of the occupation régime, would have all possibilities for raising their living standards.

"If the U.S. Government, as well as the Governments of Great Britain and France, consents to examine the question of abolishing the present occupation régime in West Berlin by setting up a Free City, the Soviet Government would be willing, on behalf of the four Powers, to enter into official contacts on this question with the Government of the German Democratic Republic, with which it has already held preliminary unofficial consultations before the dispatch of this Note. . . . At the same time the Soviet Government is ready to open negotiations with the Governments of the United States and other countries concerned on granting West Berlin the status of a demilitarized Free City.

"If this proposal is not acceptable to the U.S. Government, there is no topic left for talks on the Berlin question by the former occupying Powers. . . .

"It should also be taken into consideration that the necessity may arise of talks between the city authorities of both parts of Berlin, and also between the German Democratic Republic and the German Federal Republic, for a settlement of issues that may arise.

"In view of this, the Soviet Government proposes to make no changes for six months in the present procedure for military traffic of the United States, Great Britain, and France between West Berlin and the German Federal Republic. It regards this period as quite adequate to find a sound foundation for a solution of the problems connected with the change in the position of Berlin, and to prevent the possibility of any complications. . . .

"If this [six-months'] period is not used for reaching a relevant agreement, the Soviet Union will effect the planned measures by agreement with the German Democratic Republic. . . . At the same time there will be an end to all contacts still maintained between representatives of the armed forces and other officials of the Soviet Union in Germany and corresponding representatives and officials of the United States, Great Britain, and France on questions pertaining to Berlin. . . .

"Voices are raised in the capitals of some Western Powers claiming that those Powers do not recognize the Soviet Union's decision to discard the functions of maintaining the occupation status in Berlin. If behind the word 'non-recognition' there really lies the intention to resort to force and draw the world into a war over Berlin, the advocates of such a policy should take into consideration the fact that they assume a very grave responsibility for all its consequences before the peoples and before history.

"Methods of blackmail and reckless threats of force are least of all opportune in solving such a problem as the Berlin issue. Such methods will not help to settle a single question; they can only aggravate the situation to danger-point. But only madmen can go to the length of unleashing another world war over the preservation of occupation privileges in West Berlin. If such madmen should really come to the fore, there is no doubt that strait-jackets could be found for them.

"Any violation of the frontiers of the German Democratic Republic, Poland, or Czechoslovakia, or any aggressive actions against any member-State of the Warsaw Treaty, will be regarded by all its participants as an act of aggression against them all and will immediately cause appropriate retaliation. . . ."

At a press conference in Moscow on Nov. 27, M. Khrushchev denied that the six-months' period mentioned in the Soviet Notes constituted an "ultimatum." He added, however, that a Western refusal to agree to the Soviet proposal "will not stop us from executing our plans" since there would be "no other way out."—(Soviet Embassy Press Department, London)

A. ISRAEL.—Wife of British Air Attaché murdered on Syrian Border. - Syrian Infiltrators accused. - Israeli Protest to U.N. at Syrian Border Attacks.

Mrs. Joyce Doran, the wife of the British Air Attaché in Tel-Aviv, was found shot dead on Nov. 19 in a *wadi* a few hundred yards from the Syrian frontier, near the point where the River Jordan enters the Sea of Galilee.

Mrs. Doran had been spending a holiday in the area and was staying at an Italian hospice on the Mount of the Beatitudes; she had been missing since the morning of Nov. 17, when she left the hospice to go for a walk. Following investigations by the Israeli police and U.N. observers, assisted by tracker dogs, the Israel Foreign Ministry announced the same night (Nov. 19) that the body of Mrs. Doran had been found 500 yards west of Syrian positions on the east bank of the Jordan; that she had been hit by three rounds from a sub-machine gun fired at close range; that three empty cartridge-cases had been found nearby bearing markings in Arabic; and that the tracks of three men had been found leading to and from the scene of the murder from the west bank of the Jordan River.

The Israel Foreign Ministry issued a further statement on Nov. 21 claiming that the report of the U.N. observers (which was not published) had fully confirmed the Ministry's own investigations into the murder of Mrs. Doran. It was stated that the Syrian authorities had refused to allow the U.N. observers to cross the Jordan into Syrian territory to continue their investigations; that the Syrian representative on the mixed armistice commission had likewise refused to participate in the investigation; and that Mrs. Doran had apparently been murdered by armed infiltrators who crossed the Jordan and then returned to the Syrian military post on the east bank.

The murder of Mrs. Doran occurred in the demilitarized zone on the Israel-Syria border, which had been the scene of several incidents in recent weeks.

Early in November U.A.R. forces on the Syrian side of the border had opened fire on Israeli farmers working in the fields, while on Nov. 19 (the same day on which Mrs. Doran's body was found) machine-gun and rifle fire was directed against the Hulata agricultural settlement, near the scene of the murder.

Heavy Syrian artillery fire was directed on Dec. 3 against nine Israeli agricultural settlements in the Hulata area; three persons were wounded and houses, stores and farm machinery wrecked. The firing lasted for about an hour until U.N. observers arrived on the scene. On the same day a Syrian military post opened fire on a group of Israeli shepherds, one of whom was killed.

For some weeks beforehand the Israeli Government had claimed that a Syrian military post had been established in the demilitarized area which was the scene of the murder of Mrs Doran; strong protests were made to the Israel-Syrian mixed armistice commission (which has not functioned for several years), and the matter was brought to the attention of the Chief of Staff of the U.N. Truce Supervision Organization, Major-General von Horn. On Nov. 28 the Israel Foreign Ministry claimed that the report of the U.N. observers had confirmed the presence of a Syrian military post in the area where Mrs. Doran's body had been found.

The Israeli Government called on Dec. 4 for an urgent meeting of the Security Council to consider the "grave acts of aggression" committed by armed forces of the U.A.R. on the previous day. In a letter to the president of the Security Council, the Israeli representative at the U.N. (Mr. Eban) said that the incidents of Dec. 3 were "the latest and most serious in a number of attacks recently perpetrated by Syrian forces against Israeli territory, which included the murder in cold blood of Mrs. Doran. These attacks . . . constitute a serious breach of the U.N. Charter and the Israel-Syrian armistice agreement."—(Times - Daily Telegraph - Israel Government Press Office) **(Prev. rep. Border Incidents, 16021 A.)**

B. NETHERLANDS. — 10,000 Indonesian Repatriates to emigrate to United States.

The Netherlands Government Commissioner for Emigration announced on Nov. 16 that the United States had agreed to admit 10,000 Dutch repatriates from Indonesia as immigrants, under special American legislation. To qualify for admission to the U.S.A. the persons concerned would have to be holders of Dutch passports, must formerly have been resident in Indonesia, and must have come to Holland between Jan. 1, 1949 and Sept. 2, 1958.—(Netherlands News Agency)

(Prev. rep. 16040 D; 15931 A.)

A. EASTERN GERMANY. — General Election. - Purge in Socialist Unity Party Leadership.

General elections for a new 400-member *Volkskammer* were held in Eastern Germany on Nov. 16, together with elections for the *Bezirkstage* (the 14 district councils which have replaced the former *Land* Parliaments in the Eastern zone) and the East Berlin City Council. The provisional results of the general election were announced as follows by the East German News Agency (A.D.N.): total electorate, 11,839,217; total votes cast, 11,707,715 (98.87 per cent); vote for National Front candidates, 99.87 per cent; invalid votes, 0.13 per cent.

As in 1954, the electors were asked to approve a single list of candidates drawn up by the National Front—the five parties of the Government coalition under the leadership of the Socialist Unity (Communist) Party—and "mass" organizations such as the trade unions, women's and youth organizations, etc. Of the 400 candidates on the single list, 202 belonged to the Socialist Unity Party, 47 to the East German Christian Democratic Union, 46 to the Liberal Democratic Party, 45 to the National Democratic Party, and 45 to the Democratic Peasant Party, the remainder being nominees of the "mass" organizations. The proportions allotted to the political parties were identical with those at the last (1954) elections.

Large numbers of voters—e.g. factory, office and shop workers—were marched to the polls *en bloc*, accompanied by brass bands and by loudspeaker vans calling on them to vote for the Government. Separate booths were provided for voters casting their votes against the single list, but for weeks beforehand the East German press and radio had stressed that persons using them would be considered "enemies of the Socialist State" and that negative votes would be regarded as a "hostile act" against the regime. As a result, virtually no use was made of these booths, each of which was in charge of a Communist official.

Prior to the elections, a number of leading Communists were purged from the central committee of the Socialist Unity Party at a congress which ended in East Berlin on July 16; at the same time the central committee was enlarged from 91 to 111 members (44 elected for the first time), in addition to 44 "candidate" members. Those dropped from the central committee included Professor Fred Oelssner, one of the eight Deputy Premiers; Herr Fritz Selbmann, another Deputy Premier; Herr Fritz Lange, Minister of Education; Herr Paul Wandel, the East German Ambassador in Peking; and Frau Paula Wittkowski, deputy chairman of the State Planning Commission. Herr Selbmann was subsequently relieved of his post as Deputy Premier on Sept. 24.

No reasons were given for the "demotion" of the above-mentioned persons, but Professor Oelssner (the party's theoretician) was understood to have criticized the policy of forcing private farmers to join the State co-operatives, while Herr Selbmann was believed to have urged a reduction of "work norms" (i.e. the minima laid down for the output of individual workers, non-compliance with which entails penalties and reduction of pay). Herr Wandel had prepared a statement for "self-criticism" at the party congress, which he was not allowed to deliver. The *Manchester Guardian* Correspondent in Germany said that Herr Lange had been made the "scapegoat" for the continuing flight of large numbers of university professors and teachers to Western Germany, while Frau Wittkowski was "presumably the scapegoat for the failures in the fulfilment of the second Five-Year economic plan." Several of those "demoted" from the central committee—e.g. Professor Oelssner—were associated with the "Schirdewan-Wollweber group" against which action was taken in February last (see 16076 A).

Herr Max Fechner, East German Minister of Justice from 1949 to 1953, was readmitted in June to the Socialist Unity Party, from which he had been expelled in 1953 after the abortive rising of June 17 (see 15267 A). It was learned in West Berlin that he had been imprisoned until 1956 and had subsequently been under house arrest.—(Neues Deutschland, East Berlin - Frankfurter Allgemeine Zeitung - Times - Manchester Guardian) **(Prev. rep. Elections, 13875 B; Socialist Unity Party, 16076 A.)**

B. GHANA. — Par Value for Ghana Pound.

The International Monetary Fund announced on Nov. 5 that the initial par value for the Ghana pound had been established at $2.80 per Ghana pound—the rate proposed by the Government of Ghana. Other parities for the Ghana pound were given by the I.M.F. as follows: 2.48828 grams of fine gold = one Ghana £; 0.347143 Ghana pound = one U.S. dollar.
(International Monetary Fund, Washington) **(Prev. rep. Par Values, 16394 C; Ghana Membership, 15855 B.)**

C. PORTUGAL. — Cabinet Appointment.

It was announced in Lisbon on Nov. 27 that the Portuguese Minister of the Interior, Professor José Pires Cardoso, had resigned because of ill-health and would be succeeded by Lieut.-Colonel Arnaldo Schulz, hitherto a departmental head in the Defence Ministry.—(Times - Le Monde, Paris) **(Prev. rep. 16386 A.)**

D. UNITED KINGDOM. — Further Reduction in Bank Rate. - Gold and Dollar Reserves.

The Bank Rate was reduced from 4½ per cent to 4 per cent on Nov. 20—the fifth successive reduction during 1958, bringing Bank Rate to its lowest level since 1953.

It was stated in the *Financial Times* that the main objectives of the decision were (1) to help arrest the de-stocking trend in industry and to stimulate investment in the private sector, (2) to help local authorities to find the money for acceleration of housing and other capital development programmes now sanctioned by the Government; (3) to help to underpin the gilt-edged market and facilitate the Government's coming re-financing operation.

The Treasury announced on Nov. 4 that the sterling area's gold and dollar reserves had risen during October by $54,000,000 after taking into account (*a*) the payment of $28,000,000 to the E.P.U. in respect of the September deficit, and (*b*) the payment of $3,000,000 to creditor countries in the Union under bilateral settlements. As a result, the gold and dollar reserves stood at $3,174,000,000 on October 31.

The figures were regarded in official quarters as "satisfactory." It was pointed out that October was normally the start of a favourable period for the pound, and the increase in the reserves was taken as an indication that this seasonal trend was already under way.

Provisional figures for the E.P.U. October settlement showed that Britain had a deficit of £12,000,000, three-quarters of which would be settled in November in gold or dollars and one-quarter by an increase in the U.K.'s debt to the Union.

It was announced on Dec. 2 that the gold and dollar reserves had risen during November by another $41,000,000, after taking into account (*a*) the payment of $24,500,000 to the E.P.U. in respect of the October deficit, and (*b*) the payment of $2,500,000 to creditor countries in the Union under bilateral settlements. As a result, the reserves reached the record level of $3,215,000,000 on November 30.

Provisional figures for the E.P.U. November settlement showed that the U.K. had a deficit of £6,000,000, to be settled in December in the usual proportions.

The sterling-dollar rate fluctuated around $2.80¾ throughout October; there were corresponding narrow fluctuations of the transferable sterling rate in Zürich (between $2.79125 and $2.79395), which dropped only twice below that level—to $2.78945 on Oct. 9 and $2.79095 on Oct. 15. During November the sterling-dollar rate dropped gradually from 2.80¾ to 2.80$\frac{7}{16}$, closing at 2.80½ on Nov. 29. The transferable sterling rate reached a "high" of 2.79575 during the middle of the month, and closed at 2.79475 on Nov. 29.—(Treasury Press Office - Financial Times) **(Prev. rep. Bank Rate, 16355 A; Gold and Dollar Reserves, 16461 A.)**

E. LONDON. — St. Paul's Cathedral. - Dedication of American Memorial Chapel.

An American Memorial Chapel commemorating the 28,000 U.S. Servicemen who died in the Second World War while operating from bases in Britain was dedicated in St. Paul's Cathedral on Nov. 25 in the presence of H.M. the Queen and Mr. Richard M. Nixon, Vice-President of the United States. A tribute from the people of Britain to the American soldiers, sailors and airmen commemorated, it is entirely British in conception, design and construction and was built from contributions donated by large numbers of British citizens.

The first public appeal for funds to enable the Memorial Chapel to be built was launched on Nov. 15, 1945, by Lord Bailhieu; another leading sponsor of the project was the late Marshal of the R.A.F. Lord Trenchard. The chapel forms an integral part of the restored East end of the Cathedral and has three large windows representing the sacrifice and resurrection of the Christian soldier in terms of Biblical scenes from the Life of Christ; the borders of the windows incorporate the coats-of-arms of the 48 States of the Union and the badges of the U.S. Army and Navy. Inlaid in the marble floor is the inscription: "To the American Dead of the Second World War from the People of Britain." The names of the 28,000 Servicemen commemorated are inscribed in a Roll of Honour which was presented by General Eisenhower to the Dean of St. Paul's in 1951 for safe-keeping, pending the completion of the Memorial Chapel.

The dedication service was conducted by the Archbishop of Canterbury (Dr. Geoffrey Fisher) and the Bishop of London (Dr. Montgomery Campbell). In addition to H.M. the Queen and Vice-President Nixon, the congregation included Prince Philip and other members of the Royal family, the Prime Minister and members of the Government, leaders of the Opposition, the Lord Mayor of London (Sir Harold Gillett), the American Ambassador (Mr. John Hay Whitney), and 12 next-of-kin of the Servicemen commemorated, who were flown from the United States.

The architects of the American Memorial Chapel are Mr. S. E. Dykes Bower and Mr. Godfrey Allen; the windows were designed by Mr. Basil Thomas.—(Church Times) **(Prev. rep. 16198 A.)**

A. IRAQ. — Arrest of Colonel Aref. - Trials of Former Political and Military Leaders. - Revision of Five-Year Development Plan. - Agrarian Reforms. - Relations with Western, Communist and Arab States.

A struggle for power developed during the late summer and autumn between the two principal leaders of the Iraqi revolution, Brigadier Kassem (the Prime Minister and Defence Minister) and Colonel Aref (the Deputy Premier and Minister of the Interior), culminating in the arrest of the latter on Nov. 4 for conspiracy against the State. Colonel Aref had played a decisive role in the *coup d'état* of July 14 as commander of the battalion which occupied the Ministry of Defence and the Baghdad Radio station at a time when Brigadier Kassem's headquarters were some miles outside the city.

Politically Colonel Aref was closely associated with the *Baath* (Renaissance) Party, which draws its support mainly from the younger officers, intellectuals, and middle classes of the Arab countries, and advocates Arab unity and a radical policy of agrarian and social reforms. [The Syrian Baathists were mainly responsible for bringing about the unification of Syria and Egypt, and the party also exercised considerable influence in Jordan before the attempted *coup d'etat* against King Hussein in April 1957.] A forceful orator, Colonel Aref had greatly embarrassed the Government—which wished to pursue a neutral foreign policy—by his violent attacks on both the Western Powers and Communism and by his extreme views on the agrarian problem. Colonel Aref's known support for immediate union between Iraq and the United Arab Republic was also a source of embarrassment to the Government, since this policy was opposed by a strong section of Iraqi opinion and also by the large Kurdish minority in the Mosul and Kirkuk regions of northern Iraq.

Colonel Aref was relieved of his post as deputy C.-in-C. of the armed forces on Sept. 12; a subsequent Army statement declared that this had been done at his own request, to enable him "to carry out his great responsibilities as Deputy Premier and Minister of the Interior." On Sept. 30, however, Brigadier Kassem and the Council of Sovereignty signed a decree relieving Colonel Aref of his Cabinet posts, "in consideration of the needs of the public interest and on the ground of a recommendation by the Prime Minister," and appointing him Ambassador to Western Germany. A Cabinet reshuffle was carried out at the same time whereby Dr. Jabir Omar (Minister of Education) and Brigadier Fuad al-Ratabi (Minister of Reconstruction), both of whom were reported to be supporters of Colonel Aref, were also relieved of their posts, although Brigadier Ratabi was appointed a Minister of State; Brigadier Ahmed Mohammed Yahia became Minister of the Interior, whilst Sayed Rashid Mahmoud (Minister of Agriculture) and Mr. Mohammed Hadid (Finance Minister) were appointed acting Ministers of Education and Reconstruction respectively.

Colonel Aref did not leave Baghdad to take up his diplomatic appointment until Oct. 12. During the interim period unofficial reports alleged that a plot by his supporters in the Army to seize power had been suppressed by the Government, and that he himself had been placed under house arrest; these reports, however, were categorically denied on Oct. 8 by a Government spokesman, who described them as "without any foundation." Colonel Aref saw Brigadier Kassem on the latter date for what was officially described as "a cordial courtesy visit," and was seen off by the Prime Minister at Baghdad airport on Oct 12.

While in Europe, however, Colonel Aref made no attempt to take up his duties in Bonn or even to present his credentials; instead he visited Brussels, Rome, Munich, and Vienna. On Nov. 4 he flew back to Baghdad, and on his arrival went to the Defence Ministry to see Brigadier Kassem. During their interview the Prime Minister was reported to have offered Colonel Aref the posts of Ambassador in London or Cairo, both of which he declined, whereupon he was arrested. Several hours later Baghdad Radio issued an official communiqué stating that "the Iraqi Ambassador in Bonn and retired colonel" had returned to Iraq "without authority or permission," and that he would be tried on a charge of "plotting against the country's interests" because of his "repeated attempts to disturb general security."

Brigadier Kassem said in a broadcast on Nov. 6 that he would maintain the independence and sovereignty of Iraq, while doing all in his power to serve the cause of the Arab countries. Comment in the British press suggested that Colonel Aref's agitation in favour of immediate union with the U.A.R. was not approved by President Nasser, who was believed to have supported Brigadier Kassem during the struggle between the two Iraqi leaders.

Political Trials.

A new law against conspiracy and corruption was published on Aug. 10 making it an offence *inter alia* to conduct policy in a manner contrary to the national interest; to bring the country nearer to war or make it a war area; to attempt to use the armed forces against other Arab States; to instigate foreign Powers to endanger Iraq's security; to interfere in the internal affairs of other States; to restrict public freedom; to falsify election results; to tamper with the course of justice; to waste public funds; to issue ordinances for the benefit of a private person or group; to accept funds from other countries; and to seek to evade taxation. The law was made retroactive for 19 years so as to cover offences committed since Sept. 1, 1939. The highest penalty laid down was hard labour for life, but it was provided that where an existing law laid down a heavier penalty [i e. the death penalty] this might be applied. A Special Military High Court was set up to administer the law, persons appearing before it being given the right to be defended by counsel of their own choice at all stages of the proceedings. No appeal against the court's decision was allowed except when the death sentence had been imposed, in which case appeals would be considered by the Defence Minister.

A list was published on Aug. 9 of 108 prominent supporters of the former régime who would be tried under the new law, including former Ministers, Army officers, deputies, officials, police officers, and radio and press propagandists. Eighteen of these were tried between Aug. 16 and Nov. 19 on various charges, the most important of which concerned a plan said to have been made by the then Iraqi Government in 1956 to bring about a *coup d'état* in Syria, allegedly with British and U.S. support; the evidence on this plan largely agreed with that given at the Damascus conspiracy trial in January-February 1957 [see 15582 A.] Among the accused were three former Prime Ministers, Dr Fadil Jamali, Mr. Ahmed Mukhtar Baban and Dr. Tewfik Suweidi; Mr. Burhanuddin Bashayan, a former Foreign Minister; General Rafiq Aref, the former Chief of Staff; General Ghazi Daghistani, former deputy Chief of Staff; Brigadier Ahmed Mari, former Chief of Army Intelligence; Mr. Abdul Jalil al-Rawi, former Iraqi Minister in Damascus; and a number of Army officers and employees of Baghdad Radio.

The first and longest of the trials, that of **General Daghistani**, opened on Aug 16 in the Chamber of Deputies in Baghdad and continued until Aug 28. Mr. Rawi stated in evidence that the late Crown Prince Abdul Ilah had "made continual efforts to establish the unity of Iraq and Syria so as to become King of Syria," but that General Nuri es-Said had opposed this policy until 1956. He also alleged that Beirut had been the centre of the "conspiracy" against Syria, and that certain Syrian politicians had been in the pay of the Iraqi Government, including M. Lyan, leader of the extreme right-wing Syrian People's Party. Mr. Baban also testified that Prince Abdul Ilah had planned to make himself King of Syria, adding: "I opposed the plan to send the Army to Syria in 1956 when I was Defence Minister, and told Ghazi (Daghistani) so. He agreed the plan was impossible and impracticable. Even the King opposed the plan."

Brigadier Mari alleged that money and arms had been supplied to groups of Syrian political exiles in the Lebanon through the Iraqi military attaché in Beirut, Colonel Samarrai, whilst General Aref said that General Daghistani had been made responsible for Colonel Samarrai's activities. He also alleged that the U.S.A. had wished to use the Iraqi Army against the Syrian Communists, but that the Army leaders had refused to agree. Dr. Jamali described high-level talks in Baghdad on the "Communist danger" in Syria, at which he had been present; he said that "the U.S.A. told us they were ready to help us if we stood up to this threat, but I considered that developments in Syria did not constitute an immediate danger to Iraq." Three Air Force officers described in detail how arms for the Syrian exiles had been flown to Beirut since 1956, the last delivery being made in June last.

In a statement to the court, General Daghistani admitted the existence of a plot against Syria and his own participation therein. The plan, he said, envisaged the granting of military and financial aid to the value of nearly 1,000,000 dinars (about £1,000,000) to Brigadier-General Shishakly, the former Syrian dictator, and the setting-up of a military training centre on Iraqi territory for the Syrian exiles. He himself had been sent to Switzerland by General Nuri es-Said in 1956 to meet General Shishakly, to whom he had passed on the sum of 10,000 dinars. General Daghistani denied, however, that he had taken any part in drawing up the plan, and said that he had agreed to supervise the military side of it solely in order to "steer things towards a settlement" without the Army becoming involved.

The trials which followed were shorter, as much of the relevant evidence had already been given during the trial of General Daghistani. **General Aref** appeared before the court on Aug. 30, followed by **Brigadier Mari,** a number of other senior officers, and five employees of Baghdad Radio who were charged with conspiratorial activities arising from their association with the U.S. Information Service. After the trial of **Mr. Mohammad Ali Karim** (chief announcer of Baghdad Radio) the public prosecutor accused his counsel of making propaganda for the old régime in his speech for the defence, whereupon the president of the court (Colonel Mahdawi) ruled that counsel for Mr. Karim should not appear in court again.

Dr. Jamali, whose trial lasted from Sept. 20-25, was charged with conspiring against Syria, intervening in the internal affairs of Lebanon, promoting a policy contrary to Iraqi interests, misusing public money, and falsifying election results. In a long statement in his defence, Dr. Jamali said that he was a sincere Arab nationalist devoted to the aim of Arab unity, although he differed from President Nasser on the means of attaining it. He had regarded the Union of Syria and Iraq as the first step towards a wider Arab union, but had wanted to effect it by agreement and had never interfered in Syria's internal affairs. He had chosen to co-operate with the West against Communism because "imperialism is a dying force and a decreasing danger, whereas Communism is growing in strength," but he had also co-operated with the Arab countries and the Afro-Asian bloc against "imperialism and Zionism." His counsel (Mr Issa Taha) based his defence on the contention that Dr. Jamali had acted in good faith and could not be accused of having acted with criminal intent.

Mr. Bashayan, Mr. Baban, and **Dr. Suweidi** were tried between Oct. 4 and Nov. 2 on charges similar to those brought against Dr Jamali. During Mr. Bashayan's trial a sensation was caused when it was alleged in court that Dr. Jabir Omar (who had been removed from the Cabinet four days before—see above) had been appointed by General Nuri es-Said and Mr Bashayan to a committee sent to Amman to take part in financial operations for the promotion of a union between Iraq and Syria. Counsel for the three accused contended that they had never urged any course which could have involved Iraq in war with Syria, and that their aim had been exclusively to bring about an agreed union by peaceful means.

Sentences of death by hanging were passed on Dr. Jamali, General Aref, and General Daghistani on Nov. 10, on Mr. Bashayan on Nov. 13, and on Mr. Baban on Nov. 19. Dr. Suweidi was found not guilty of active participation in the plot against Syria, but guilt of endangering Iraqi security and squandering public money; he was sentenced on Nov. 19 to life imprisonment. The other accused were sentenced to shorter terms of imprisonment with the exception of Mr. Karim and the other employees of Baghdad Radio, who were acquitted.

The International Commission of Jurists announced on Oct. 9 that it had asked Brigadier Kassem for permission to send a legally qualified observer to the trials, as it had received "disturbing reports" as to "the alleged retroactive character of the charges and the restrictions on the rights of defence," which if substantiated would constitute "a serious breach of a number of basic principles of law." [The phrase "restrictions on the right of defence" apparently referred to the exclusion of Mr. Karim's counsel from court.] The Commission's request was ignored by the Iraqi Government.

Seven persons accused of sheltering General Nuri es-Said after the revolution were tried by a military tribunal in Baghdad on August 3-4.

It was revealed at the trial that General Nuri fled at dawn on July 14 to the house of a friend, Mr. Mahmoud al-Astarabadi (an 80-year-old merchant), and that on the following day, disguised as a woman and accompanied by Astarabadi's wife and a Persian woman servant, he drove to a house belonging to the brother of Dr. Dhia Jaffar, the Minister of Development. Refused admittance to Dr. Jaffar's house, he was recognized by the mob and lynched, together with Mrs. Astarabadi. Mr. Astarabadi, two of his sons, and his cook were each sentenced to three years' imprisonment; a third son and the Persian servant to five years; and the family chauffeur to one year.

Revision of Five-Year Development Plan. - Relations with Iraq Petroleum Company.

Under a law published on Aug. 12 the Republican Government dismissed the Development Board, which consisted of experts and was responsible for the administration of the five-year plan adopted in 1956 (see 14884 A), and replaced it by a new board comprising the Prime Minister, the Deputy Premier, and the Ministers of Development, Finance, Economics, Agriculture, Social Affairs, and Communications. It was provided that the new board would appoint a "Development Guidance Committee" of experts, who might be either Iraqis or foreign nationals.

The members of the former Development Board—who included an American reclamation expert, Mr. Clifford A. Willson—enjoyed a status equivalent to that of a Cabinet Minister, and were responsible for the allocation of 70 per cent of the national oil revenues for development purposes.

It was announced at the same time that the Government would revise the five-year plan to eliminate "superfluous and wasteful" items, and would concentrate on raising the standard of living by developing local industries and building houses and hospitals.

In an analysis of the economic and social results of the five-year plan, published in *Le Monde* (Paris) on Aug. 12, it was pointed out that the plan had concentrated on the development of irrigation and transport and the construction of public buildings for administrative purposes. It continued: "The great irrigation projects brought about hardly any improvement in the fellah's living standards; the indispensable complementary measures for increasing agricultural productivity (the struggle against disease, installation of 'pilot-farms,' provision of seeds, tools, machines, etc.) were inadequate. . . The only people to benefit from the irrigation plans were the large landowners who possessed capital with which to develop the irrigated land, they formed the régime's strongest support. The peasants profited comparatively little from these advantages, for the increase in productivity was small and the division of crops unfavourable to them, two-thirds going to the landowner . . . The centres of investment, the sites of great public works, . . . tended to form islands of inflation . . . All these circumstances have provoked a massive rural exodus which is dislocating the economic life of the villages and depressing living standards still lower. Those who leave the countryside accumulate in the towns, especially Baghdad, where they hope to find a better future. . . . This population, estimated at present at 50,000 men in Baghdad, lives in huts on the outskirts of the city. Its situation is precarious. There is no drinking water or sanitation, and the tide of immigrants continues to rise. Wages are higher in the towns, but for lack of qualifications the newcomers aggravate the problem of under-employment and depress still lower the price of unskilled labour. . . . Development was not harmonized, and allowed the inequalities of income characteristic of the old social system to continue to exist, while aggravating them in many cases. New inequalities were added to the old. . . . The greater part of the increase in the national income was concentrated in the hands of big businessmen, landowners, and technicians of all kinds. In Baghdad a carpenter earns more than a man with many diplomas. A mass of unemployed or underpaid intellectuals increased the number of desperate men ready to follow a revolutionary leadership. . . Such were the circumstances which the revolutionaries were able to exploit."

Mr. G. H. Herridge, managing director of the Iraq Petroleum Company and associated companies, had discussions on Aug. 20 with Brigadier Kassem and the Minister of Economics, Dr. Kubba, who assured him that the Government intended to honour Iraq's agreements with the companies. Talks were subsequently opened between the Government and the I.P.C. on the latter's expansion programme, and on the Iraqi Government's proposal that the company should surrender parts of its concession, which were not being exploited or developed, for development as a State operation. The Finance Minister (Mr. Hadid) denied, however, that the Government was seeking a revision of its 50-50 royalty agreement with the I.P.C.

With a view to expanding Iraqi oil production, the Government announced on Nov. 19 that it had decided to claim a 12-mile limit for its territorial waters; where the waters of neighbouring countries were affected, Iraq would be prepared to solve any problems which might arise in accordance with international law or by mutual agreement.

The Times commented on this announcement as follows: "Iraq's territorial waters are confined to the head of the Persian Gulf, and the Government's decision may affect areas claimed by Persia and Kuwait. It also suggests that Iraq wishes to proceed with the development of a new port south of Basra, on which there have been some discussions with Kuwait before; and it means that, if the decision is internationally accepted, work can begin on the construction of a new deepwater oil terminal south of Fao, which the Iraq Petroleum Company wants to build as a new outlet for the Basra oilfield.

"Plans for the terminal have been ready for some time, but no contracts could be awarded until the Government had defined Iraq's territorial waters so that the proposed site would fall within them. The terminal, which is expected to cost D16,000,000 and to be completed by the end of 1960, will be 24 miles south of Fao but within 12 miles of the nearest point of the Iraq coast. It will enable the output of the Basra field, which is now 10 to 11 million tons annually, to be doubled. This is part of the general programme of expansion proposed by I.P.C. to bring their total annual production from the present level of about 35,000,000 tons to 57,000,000 tons by the end of 1961. Increased throughput to the Mediterranean will be provided in the next three years by building additional loops on the existing Syrian pipelines.

"The expansion programme will almost double the Iraq Government's oil revenues, which on a 50-50 profit-sharing basis are now running at about £70,000,000 a year; and even by the end of next year it is expected the Government's share will have risen to £80,000,000-£90,000,000."

Agrarian Reforms. - Purge of Officials. - Amnesty for Political Offenders under Former Regimes.

An agrarian law was promulgated on Sept. 30 limiting individual land holdings to 1,000 dunums (about 250 acres) of irrigated or 2,000 dunums of unirrigated land. The Government will take over the surplus land within the next five years for distribution among the peasantry in lots of 7½ to 15 acres, and will pay compensation to the former owners in the form of 3 per cent Treasury bonds redeemable over 20 years.

As Minister of the Interior, Colonel Aref had carried out a widespread purge of senior officers or officials accused of inefficiency or corruption; about 150 were reported on Aug. 6 to have been suspended or retired, including some 40 Army officers, 11 of the 14 provincial governors, and 45 police and security officers.

A law was published on Aug. 4 empowering the Government to suspend for five years any official whose employment appeared "detrimental to the public interest," or to retire him if over the age of 55. A second law published on Aug. 17, with retroactive effect to 1939, imposed a maximum penalty of five years' imprisonment and a fine for persons found guilty of corruption, and required all officials, officers, bankers, and presidents of corporations to supply full details of their property.

Colonel Aref's successor, Brigadier Yahia, stated on Oct. 14 that "the urgent phase of the purge, covering the first three months of the revolution, is over. We are now starting a second and long-term phase, which we expect to involve only a small minority of officials."

The Government announced on July 25 the abolition of the system of "tribal law," which was regarded as a means of corruption as it had enabled previous Governments to quash judgments of the civil courts directed against persons whom they wished to favour. Other measures, announced at the same time, reduced the working day to eight hours and repealed legislation permitting certain industries to make their employees work a 54-hour week without payment for overtime.

A general amnesty was proclaimed on Sept. 7 for persons imprisoned for political offences "concerned with attempts to liberate the country and reform the régime between September 1939 and July 14, the day of the national revolution." It was stated that about 600 people would benefit from the amnesty, most of whom had been imprisoned for supporting the 1941 uprising. A large number of political refugees returned to Iraq after the revolution; they included Mr. Rashid Ali (see 16372 D), the Mullah Barazani (leader of the Kurdish uprising of 1943-45) and Dr. Boustani, a former member of the Legation staff in Paris, who was deprived of Iraqi nationality in 1937 for left-wing activities.

Relations with Foreign Countries.

In their statements on foreign policy, the members of the Republican Government repeatedly affirmed their desire for neutrality and for friendly relations with all countries. Nominally, Iraq remained a member of the Baghdad Pact, although no final decision has yet been taken on Iraq's continued membership, and apparently inconsistent views have been expressed on this question by various members of the Republican Government.

Brigadier Kassem said on Aug. 5 that he would not take any decision on the subject without obtaining the consent of the other members of the alliance; on the other hand, he told a Polish correspondent on the following day that the Government's policy was "not to belong to any group of States directed against another group," and that it would therefore consider "whether or not it was in the country's interests" to remain in the Baghdad Pact. Colonel Aref, in an interview published in *U.S. News and World Report* on Aug. 18, said that "Iraq will continue to belong to the Baghdad Pact if it is to her advantage. But the Baghdad Pact must not have its headquarters in London or elsewhere. Its headquarters must be in Baghdad." [Baghdad was the headquarters of the Pact organization until the revolution, but since then the headquarters have been transferred to Ankara—see 16502 A.]

Reversing the policy of the previous régime, the Republican Government established diplomatic relations with the Soviet Union, China, and the other Communist countries as stated in 16305 A. Trade delegations from several of these countries subsequently visited Baghdad, and in October trade agreements were signed with the U.S.S.R., Yugoslavia, and Eastern Germany. Brigadier Kassem, however, reaffirmed the Government's determination to resist all foreign ideologies, stating in an address to religious leaders on Sept. 14 that "our people have their own religion and faith in God, and we will not be frightened either by Communist, American, British, or Fascist ideas."

Recent developments in Iraq's relations with individual foreign countries are described below under cross-headings:

France. The Iraqi Government refused on Aug. 4 a French offer to recognize the Iraqi Republic and to re-establish diplomatic relations, which had been broken off by Iraq at the time of the Suez crisis of 1956.

Eastern Germany. A trade agreement between Iraq and Eastern Germany was signed in Baghdad on Oct. 26, whereby Eastern Germany undertook to supply textiles, chemicals, machine-tools, and precision instruments to the value of £200,000 in return for grain, hides, and dates. Transactions under the agreement will be paid for in convertible sterling. Herr Weiss (the East German Deputy Minister for Foreign Trade), who had signed the agreement, stated that his Government would offer 20 places at East German universities for Iraqi students and 50 places in East German factories for training skilled Iraqi workers.

Netherlands. The Netherlands formally recognized the Iraqi Republic on Aug. 8.

Soviet Union. The newly appointed Soviet Ambassador to Iraq, M. Gregori Zaitzev (formerly head of the Middle East Department at the Soviet Foreign Ministry), arrived in Baghdad on Aug. 4. Diplomatic relations between the two countries had been broken off by General Nuri es-Said's Government in January 1955.

A trade and shipping agreement between Iraq and the Soviet Union, which undertook to accord each other most-favoured-nation treatment, was signed in Baghdad on Oct. 12. Under the agreement the Soviet Union will export agricultural and other equipment, tractors, cars, rolled-steel sections, timber, paper, and medical supplies to Iraq in return for hides, wool, cotton, dates, and oilseeds.

United Arab Republic. Prince Mahmoud Namouk, a member of the Egyptian royal family, was arrested on July 22 in Baghdad, where he had gone before the revolution to make arrangements for the marriage of his cousin, Princess Fazilet, to King Faisal. At the request of the U.A.R. Government he was flown to Cairo on Aug. 31 to serve a sentence of 15 years' imprisonment for conspiracy which had been passed on him *in absentia* in March [see 16085 A; 16148 A.]

United Kingdom. A Foreign Office spokesman stated on Aug. 21 that the delivery of light arms ordered by the previous Iraqi Government, which had been suspended since the revolution, would shortly be resumed.

The Republican Government terminated on Sept. 24 the services of 50 British servicemen (26 from the R.A.F. and 24 from the Army) who had been loaned to the Iraqi forces to assist in instruction and training. They were given a month to leave the country, and granted six months' maintenance allowance to cover losses on rent and furniture. It was estimated at the end of September that over 150 Britons employed in Iraq had been ordered to leave the country since the revolution, including about 75 out of 400 experts working for the Iraqi Government; at least another 1,000 dependants of the pre-revolutionary British colony in Iraq (numbering some 5,000) had also left the country.

The appointments of the three founding members of Baghdad University—Professor J. H. Biggart (Professor of Pathology at Queen's University, Belfast), Professor Kessweg (a German), and Professor Dawson (an American)—were cancelled on Sept. 1, an Egyptian being appointed president of the university. The three founding members had been appointed before the revolution to integrate the 13 colleges in Iraq into a single university.

United States. Brigadier Kassem announced on Aug. 20 that deliveries of U.S. arms would be resumed, and stated that his Government wished to receive Western military aid; "we want to keep the friendship of our old allies and to win new friendships as well," he added. A cargo of U.S. military supplies arrived at Basra on the same day. In Washington, a State Department spokesman said that the U.S. programme for training the Iraqi police was being continued at the Iraqi Government's request, but negotiations would be necessary before the military aid programme was resumed.

Yemen. The Crown Prince and Prime Minister of the Yemen, the Emir Mohammed el-Badr, visited Baghdad on Aug 22-26 for discussions with Brigadier Kassem. A joint communiqué affirmed their determination to "stand together in their attitude to all international events" and to uphold the U.N. Charter, the Arab League Charter, and the Arab collective security pact.

Yugoslavia. A trade agreement for the purchase by Iraq of Yugoslav tankers and machinery was signed in Baghdad on Oct. 7, together with an agreement for co-operation in economic, scientific and technical matters.

In a letter to the general secretary of the Arab League (M. Abdel Khalek Hassouna) published on Aug. 12, Brigadier Kassem said that the Iraqi Republic would "atone for the errors of the past and ensure that the League remains purely an instrument of Arab nationalism," adding that the revolution had eliminated "the traitors who wished to sabotage the League's efforts."—(Times - Daily Telegraph - Manchester Guardian - Le Monde, Paris - New York Times)

(Prev. rep. 16305 A; 16324 D.)

A. JAPAN. — Atomic Contract for British Company.

The Fuji Electric Company of Japan announced on Nov. 20 that it had concluded a contract with the General Electric Company of England for technical co-operation on nuclear power generation, subject to approval by the Japanese Government.

It was stated that the contract had been concluded in anticipation of an order from the Japanese Atomic Power Generating Company to the G.E.C. group, as well as for the more general purpose of acquiring technical knowledge on atomic power generation. The Fuji Company would pay a licence fee of between £140,000 and £180,000 and royalties of 4 per cent to the G.E.C., and about 3 per cent to the British Atomic Energy Authority.

A G.E.C. spokesman in London explained that the contract was for technical co-operation on nuclear power generation not only in Japan but throughout the whole of the Far East.

Three British atomic energy industrial groups, led respectively by Associated Electrical Industries, the English Electric Company, and G.E.C., are seeking a contract from the Japanese Atomic Power Generating Company for a Calder Hall-type nuclear power station.—(Times - Manchester Guardian)

A. NOBEL PRIZES. — Annual Awards. - Boris Pasternak refuses Literature Prize.

The annual awards of the Nobel Prizes were announced during October and November, the recipients being as follows :

Literature Prize. Awarded by the Royal Swedish Academy of Literature on Oct. 23 to Boris Pasternak, the Soviet writer and poet, for "his important contributions both to contemporary poetry and to the great Russian narrative tradition." It was the first time the Literature Prize had been awarded to a Russian author living in the Soviet Union, the last Russian-born writer to receive it was Ivan Bunin (in 1933), who had been living in France as an exile for many years.

The conferment of the Literature Prize on Boris Pasternak was described in the Soviet Union as a "hostile political act" and led to bitter attacks on Pasternak personally, culminating in his expulsion from the Union of Soviet Writers. These attacks were combined with violent denunciations of Pasternak's novel *Doctor Zhivago*, which is banned in the U.S.S.R. but has been published in translation in many Western countries. As a result of these developments, Pasternak declined the Literature Prize on Oct. 29. [See also 16525 A, where an account is given of the controversy in the U.S.S.R. over the novel *Doctor Zhivago*; a biography of Boris Pasternak is given in the same article.]

Medicine Prize. Awarded by the Royal Carolinian Medico-Surgical Institute of Stockholm on Oct 30 to three American scientists—Professor Joshua Lederberg (33), of the University of Wisconsin; Dr. Gerald W. Beadle (55), Professor of Biology at the California Institute of Technology; and Dr. Edward L. Tatum (48), of the Rockefeller Institute for Medical Research in New York. Half the cash value of the prize was awarded to Professor Lederberg, who was cited specifically for "his discoveries concerning genetic recombination and the organization of the genetic material of bacteria." The other half was divided equally between Drs. Beadle and Tatum for their pioneering work in biochemical genetics.

The genetical research for which the Prize was awarded concerns the properties of genetic inheritance in micro-organisms; the researches of the three scientists have added greatly to knowledge in this field, and the new ideas and methods evolved by them have been widely adopted by research workers in many countries. Professor Lederberg has carried out his researches independently of the other two scientists, while Drs. Beadle and Tatum have worked in collaboration. Dr. Beadle is at present a visiting professor at Oxford.

Physics Prize. Awarded by the Royal Swedish Academy of Science on Oct. 28 jointly to three Soviet scientists—Dr. Pavel Cherenkov (54), Professor Ilya Frank (50) and Academician Igor Tamm (63)—for "the discovery and interpretation of the Cherenkov effect."

The "Cherenkov effect"—discovered by Dr. Pavel Cherenkov in 1934—is a bluish light which is emitted when charged atomic particles move through water or other media at a speed faster than that of light itself; a phenomenon observed, for example, in water in which an atomic reactor is submerged. Professor Frank and Dr. Tamm subsequently worked out an equation-supported theory which helped to guide Dr. Cherenkov in his later investigations into cosmic radiation. The "Cherenkov effect" is of great importance in atomic physics, and Russian scientists have made use of the phenomenon for a new type of cosmic-ray counter carried by *Sputnik III*.

[It was claimed in Paris that the "Cherenkov effect" had first been discovered by a French scientist, Dr. Lucien Mallet, in 1926—i.e. eight years before its discovery by Dr. Cherenkov. Dr. Mallet's claim was officially recognized on Nov 3 by the French Academy of Science and was also verified by Professor Perrin, chairman of the French Atomic Energy Commission. At the same time Professor Perrin stressed that the research work carried out by Dr. Cherenkov and his colleagues was of an entirely original character, since they had discovered an explanation of the phenomenon first noted by Dr. Mallet.]

Chemistry Prize. Awarded by the Royal Swedish Academy of Science on Oct. 28 to a British scientist, Dr. Frederick Sanger, F.R.S., for the importance of his work in demonstrating the molecular structure of insulin. Dr. Sanger (40) is head of a Medical Research Council unit working in the Department of Biochemistry at Cambridge.

In 1953 Dr. Sanger became the first chemist to determine the complete chemical structure of any protein—the protein on which he worked being insulin, the lack of which causes diabetes in man. This involved the working-out of the exact order in which the 49 molecular sub-units (amino-acids) are joined together to form the protein molecule, a pioneer achievement for all future work on protein structure.

Peace Prize. Awarded by the Nobel Committee of the Norwegian Parliament on Nov. 10 to Father Georges Pire (48), a Belgian priest, for his work for refugees and displaced persons.

Father Pire was born at Dinant, ordained in the Roman Catholic Church in 1934, and entered the Dominican Order after studying social and political science at Louvain University. From 1937 to 1947 he taught moral philosophy and sociology at the Dominican monastery of La Sarte at Huy. During the German occupation he was active in the Resistance movement, partly as a priest and partly as an intelligence officer; he was subsequently awarded the Belgian *Croix de Guerre* and other decorations. In the immediate post-war period he established a camp for the care of several hundred destitute French children.

In 1949 Father Pire started his Aid for Displaced Persons organization, aimed primarily at assisting "hard core" refugees—i.e. those who by reason of age or ill-health were ineligible for emigration and unable to establish themselves in civilian life. During the past nine years this organization has built three "European villages," each housing about 150 refugees, with two more under construction and a sixth projected. In addition, four homes for aged refugees have been established in Belgium through Father Pire's efforts.

The "European villages" are designed to give their inhabitants the opportunity to live a normal community life and to earn their own livelihood wherever possible; care is taken to provide suitable local employment where this can be done, and refugees are admitted without distinction of national origin or religious faith. Of the three villages so far built, two are in Western Germany (at Aachen and Augsburg) and one in Austria (at Bregenz); two others are building—one near Brussels and the other in the Saar—and a sixth is planned in Norway. Father Pire's organization receives no subsidy, either from the Belgian State or the Roman Catholic Church, and depends entirely on voluntary contributions from supporters in a number of Western countries. All the "European villages" were built by volunteer workers.

Father Pire stated that he would devote his Nobel Prize (amounting to 215,000 kroner, or about £15,000) to building the sixth "European village" in Norway; it will be named after Anne Frank, the German-Jewish girl who perished in the Belsen concentration camp, and whose diary, published posthumously, has achieved world fame.

The value of the Nobel Prizes for the current year is between £14,000 and £15,000 each.—(Svenska Dagbladet, Stockholm - Arbeiderbladet, Oslo - Times - Manchester Guardian - New York Times - Soviet Embassy Press Department, London - Le Monde, Paris - La Nation Belge) **(Prev. rep. Nobel Prizes, 15858 A.)**

B. LITERATURE. — Book Selections for November.

Selected books published in Great Britain and the United States are given below :

Great Britain. Ekert-Rotholz, Alice—"The Time of the Dragons." A Novel of the Far East, translated from the German. (Jonathan Cape, 16s.)

Harrison, Michael—"In the Footsteps of Sherlock Holmes." (Cassell, 25s.)

Haslip, Joan—"The Sultan." A Biography of Abdul Hamid II, Sultan of Turkey. (Cassell, 25s.)

Hough, Richard—"The Fleet That Had to Die." The Story of the Russian Baltic Fleet in the Russo-Japanese War. (Hamish Hamilton, 18s.)

Hoover, Herbert—"The Ordeal of Woodrow Wilson." (Museum Press, 35s.)

Humphreys, Emyr—"A Toy Epic." A Novel of Welsh Life. (Eyre & Spottiswoode, 12s. 6d.)

Jones, L. Marion—"The Jottings of Jemima." An Autobiographical Novel. (Allan Wingate, 13s. 6d.)

Lewis, Roy, and Stewart, Rosemary—"The Boss: The Life and Times of the British Businessman." (Phoenix House, 21s.)

Montgomery, Viscount—"The Memoirs of Field-Marshal Viscount Montgomery of Alamein." (Collins, 35s.)

Murdoch, Iris—"The Bell." A Novel. (Chatto & Windus, 15s.)

Neale, Sir John—"Essays in Elizabethan History." (Jonathan Cape, 18s.)

Oman, Carola—"David Garrick." A Biography. (Hodder & Stoughton, 42s.)

van der Post, Laurens—"The Lost World of the Kalahari." (Hogarth Press, 18s.)

Thiel, Rudolf—"And There was Light: Man's Discovery of the Universe." A History of Astronomy, translated from the German. (André Deutsch, 25s.)

Wedgwood, C. V.—"The King's War, 1641-1647." History of the Great Rebellion, Volume II. (Collins, 35s.)

Wilson, Angus—"The Middle Age of Mrs. Eliot." A Novel. (Secker & Warburg, 18s.)

United States. Lavender, David—"Land of Giants: The Drive to the Pacific Northwest, 1750-1950." (Doubleday, New York, $5.95)

Saarinen, Aline B.—"The Proud Possessors: The Lives, Times and Tastes of Some Adventurous American Art Collectors. (Random House, New York, $5.95)

Miss L. Marion Jones's *The Jottings of Jemima* is a first novel written at the age of 100; the authoress, who lives in Edinburgh, began work on it at the age of 98.
(Ed. K.C.A.) **(Prev. rep. Book Selections, 16492 B.)**

C. UNITED KINGDOM. — Parliament. - Government Whip restored to Sir Frank Medlicott.

The Prime Minister announced on Nov. 21 that the Government Whip had been restored to Sir Frank Medlicott (National Liberal and Conservative M.P. for Norfolk Central) at his own request. Sir Frank strongly opposed the Government's military intervention in Egypt at the time of the Suez crisis, resigned the Government Whip in consequence, and had since sat as an Independent.—(Times - Daily Telegraph)
(Prev. rep. 16271 E.)

A. UNITED KINGDOM. — By-elections.

Polling took place on Nov. 6 in the Chichester division of West Sussex and the Morecambe and Lonsdale division of Lancashire; on Nov. 10 in the Pontypool division of Monmouthshire; on Nov. 20 in East Aberdeenshire; and on Nov. 27 in Shoreditch and Finsbury (London). There was no change in political representation, Chichester, Morecambe, and East Aberdeenshire being held by the Conservatives, and Pontypool and Shoreditch by the Labour Party.

Chichester.

The by-election was caused by the elevation to the peerage of Sir Lancelot Joynson-Hicks (Conservative) consequent on the death of his elder brother, Lord Brentford. Result:

Loveys, Walter H. (Conservative)	23,158
Simpkins, William E. (Labour)	9,504
No change. Conservative majority	13,654

Figures at the general election were: Sir L. Joynson-Hicks (C.) 30,857, M. Jones (Lab.) 12,735—Conservative majority 18,122.

The Conservative candidate polled 70.90 per cent of the votes in the by-election and the Labour candidate 29.10 per cent, compared with respective percentages of 70.79 and 29.21 at the general election; the Conservatives thus fractionally improved their proportion by 0.11 per cent.

51.74 per cent of the voters polled in the by-election, against 71.8 per cent at the general election. The electorate numbered 63,119, an increase of 2,407 since the general election.

Mr. Walter Loveys (37) is a Sussex farmer and a former chairman of Chichester Conservative Association.

Morecambe and Lonsdale.

The by-election was caused by the conferment of a life peerage on Sir Ian Fraser (Conservative), now Lord Fraser of Lonsdale. Result:

de Ferranti, Basil (Conservative)	23,923
McManus, Frank (Labour)	12,692
No change. Conservative majority	11,231

Figures at the general election were: Sir Ian Fraser (C.) 29,706, W. Fielding (Lab.) 12,005—Conservative majority 17,701.

The Conservative candidate polled 65 34 per cent of the votes in the by-election and the Labour candidate 34.66 per cent, compared with respective percentages of 71.22 and 28.78 per cent at the general election; the Labour proportion thus rose by 5.88 per cent.

63.84 per cent of the voters polled in the by-election, compared with 74.36 per cent at the general election. The electorate numbered 57,349, an increase of 1,260 since the general election

Mr. Basil de Ferranti (28) is a director of a Manchester electrical engineering firm.

Pontypool.

The by-election was caused by the conferment of a life peerage on Mr. Daniel Granville West (Labour), now Lord Granville-West. Result:

Abse, Leo (Labour)	20,000
Thomas, Paul (Conservative)	6,273
*Morgan, Benjamin (Welsh Nationalist) ..	2,927
No change. Labour majority	13,727

* Forfeited deposit.

Figures at the general election were: D. G. West (Lab.) 26,372, A. O. Hewitt (C.) 9,800—Labour majority 16,572.

The Labour candidate polled 68.49 per cent of the votes in the by-election, the Conservative candidate 21.48 per cent, and the Welsh Nationalist 10.03 per cent, whereas at the general election the Labour candidate obtained 72.91 per cent and the Conservative candidate 27.09 per cent in a straight fight. The Labour proportion of the poll thus fell by 4.42 per cent and the Conservative proportion by 5.61 per cent.

61.69 per cent of the voters polled in the by-election, against 77.09 per cent at the general election. The electorate numbered 47,332, an increase of 412 since the general election.

Mr. Leo Abse (41) is a Cardiff solicitor and a member of Cardiff City Council.

East Aberdeenshire.

The by-election was caused by the conferment of a life peerage on Sir Robert Boothby (Conservative), now Lord Boothby, who had represented the constituency for 34 years. Result:

Wolrige-Gordon, Patrick (Conservative) ..	14,314
Urquhart, John B. (Labour)	7,986
Mackie, Maitland (Liberal)	7,153
No change. Conservative majority	6,328

Figures at the general election were: Sir R. Boothby (C.) 18,600, C. Ross (Lab.) 8,543—Conservative majority 10,057.

The Conservative candidate polled 48.60 per cent of the votes in the by-election, the Labour candidate 27.11 per cent, and the Liberal 24.29 per cent, whereas at the general election Sir Robert Boothby obtained 68 53 per cent of the votes and his Labour opponent 31.47 per cent in a straight fight The Conservative proportion thus fell by 19.93 per cent and the Labour proportion by 4.36 per cent. The Liberal Party had not contested the seat for more than 30 years.

65.90 per cent of the electorate voted in the by-election, compared with 59.76 per cent at the general election—i.e. the poll was over six per cent higher than at the general election. The electorate numbered 44,694, a decrease of 729 since the general election.

Mr. Wolrige-Gordon (23) will be the youngest member of the House of Commons; he is an Oxford undergraduate and a grandson of Dame Flora Macleod, chief of Clan Macleod.

Shoreditch and Finsbury.

The by-election was caused by the conferment of a life peerage on Mr. Victor Collins (Labour), now Lord Stonham. Result:

Cliffe, Michael (Labour)	10,214
Whipham, Thomas (Conservative) . ..	3,219
No change. Labour majority . ..	6,995

Figures at the general election were: V. J. Collins (Lab.) 25,500, M. B. Agnew (C) 9,216—Labour majority 16,284.

The Labour candidate received 76 per cent of the votes (73.5 per cent at the general election) and the Conservative candidate 24 per cent (26 5 per cent at the general election), the Labour proportion thus increasing by 2.5 per cent.

Only 24.9 per cent of the electorate voted in the by-election, compared with 61.6 per cent at the general election; the electorate numbered 54,033, a decrease of 2,360 since the general election.

Mr. Michael Cliffe (54) is an official of the National Union of Tailors and Garment Workers, and leader of Finsbury Borough Council.—(Times) **(Prev. rep. By-elections, 16233 A.)**

B. INDIA.—People's Co-operation Centres. - Progress of Community Development Programme.

It was announced in October that the Government of India had sanctioned a scheme submitted by the *Bharat Sevak Samaj* whereby that organization had established 25 people's co-operation centres in selected areas of the country on the basis of a phased programme; the main task of these centres (each covering about 11 villages) would be to stimulate and direct active co-operation and participation by the people in various developmental programmes. The *Samaj* was set up in 1952 to provide people with an opportunity of rendering service to India through a non-political, voluntary social service agency.

It was stated that the *Samaj* had enlisted the active support of all leading social welfare organizations, that the *Samaj*, as well as voluntary workers in the countryside, would act as agents of the village councils (*panchayats*) and national extension agencies in securing public co-operation and participation in various development schemes; and that the *Samaj* and its volunteer workers would also be responsible for organizing and implementing "people's programmes" (*lok karya*) to ensure the maximum utilization of all available local manpower and local resources without any kind of assistance from official sources.

Other tasks undertaken by the *Samaj* in the people's co-operation centres would include the building-up of local leadership in villages covered by the scheme, the preparation of training programmes, and the creation of conditions which would facilitate the effective functioning of rural institutions such as *panchayats* and co-operatives. In the main, the role of the *Samaj* and its local workers would be educational and promotional. The scheme would be implemented in close collaboration with the State Governments, and the *Samaj* would receive a grant from the Central Government.

It was announced on Oct. 2 that over 438,000 *gram sahayaks* (functional village leaders) had been trained at 9,475 camps by June 1958, under a programme launched on Oct. 2, 1957; the principal subjects taught related to improved agricultural and horticultural practices and livestock rearing.

The Minister for Community Development (Mr. S. K. Dey) stated in a written reply on Feb. 17, 1958, that the total number of Community Development and National Extension Service blocks in operation was 2,152, covering a population of 149,400,000. The States with the largest number of such blocks were Uttar Pradesh (349), Bihar (252), and Bombay (237).

At the invitation of the Government of India, a three-man U.N. mission arrived in Delhi at the beginning of December to study and report on the working of the Community Development Programme. This mission, designated the Community Development Evaluation Mission, consisted of Mr. M. J. Coldwell, lately president of the Canadian Co-operative Commonwealth Federation (the Canadian Labour Party); Dr. Margaret Reid, Professor of Social Anthropology in the University of London; and Professor René Dumont, of the National Institute of Tropical Agriculture in Paris.

A. SOVIET UNION. — The Pasternak Controversy.

The conferment of the Nobel Literature Prize on the Soviet author and poet Boris Pasternak (see 16523 A) was violently criticized in the Soviet Union and led to bitter attacks on Pasternak by *Pravda* and leading Russian literary magazines, notably the *Literaturnaya Gazeta* (Literary Gazette, the organ of the Union of Soviet Writers) and *Novy Mir* (New Life). Pasternak, who had at first accepted the Nobel award, subsequently declined it as a result of these attacks, after he had previously been expelled from the Union of Soviet Writers.

Soviet criticism of Pasternak was centred almost entirely on his novel *Doctor Zhivago*, which has been banned in the Soviet Union but has been published in translation in many Western countries, including Great Britain (see 16432 A), the United States, France, Italy, and the Scandinavian nations. It has been highly praised by Western literary critics as one of the most important novels to appear for many years, and has become a best-seller in many countries.

Boris Pasternak (68) was born in Moscow, the son of a well-known Russian painter (Leonid Pasternak) who emigrated to Germany after the Revolution and later settled in England after the Nazis came to power; he died in 1945 at Oxford, where his two daughters are still living. Boris Pasternak himself remained in Russia after the Revolution and established a reputation as one of the leading Soviet poets and also as a translator, notably of Shakespeare. His lengthy novel *Dr. Zhivago* – begun after the death of Stalin – traces the moral disintegration of a highly cultured physician and poet in the cataclysm loosened by the Revolution, which he had originally welcomed. A saga of Russian life in the 40 years since the Revolution, it is written from a humanitarian and non-political angle and with a high degree of objectivity.

In a broadcast on Oct. 23, the secretary of the Royal Swedish Academy of Literature (Dr. Anders Oesterling) described *Dr. Zhivago* as a "work of genius" deserving comparison with Tolstoy's *War and Peace*. He paid tribute to the author's courage "in writing, as a Soviet citizen, a work of such importance," adding that it was a "great achievement to have been able under such difficult circumstances to complete a work of such dignity, high above party political frontiers and entirely humane in outlook." Dr. Oesterling also praised Pasternak as one of the greatest poets of modern Russia, citing in particular his collections *My Sister Life* (1922) and *Themes and Variations* (1923).

The typescript of *Dr. Zhivago* was originally submitted to an Italian Communist publisher, Signor Feltrinelli, for publication in an Italian edition. The circumstances of its publication in the West were described on Oct. 31 by Signor Sergio d'Angelo, who had brought the typescript out of Russia and submitted it to Signor Feltrinelli.

Signor d'Angelo – formerly a member of the Italian Communist Party, which he left at the time of the Hungarian revolution – explained that he first heard of the book during a visit to Moscow in 1956; he had been greatly impressed by its literary quality and had asked Mr. Pasternak to let him have the typescript so that Signor Feltrinelli – then a member of the Communist Party – could be the first publisher in the West to publish it. The typescript was accordingly released by Mr. Pasternak for publication in Italy, with the full knowledge and approval of "members of Soviet cultural organizations in authoritative positions"; moreover, it had been agreed that the Italian and Russian editions of *Dr. Zhivago* should appear on the same date (Sept. 1, 1957).

Later, however, for reasons which were not known, strong Soviet pressure had been exerted on the Italian Communist Party to persuade Signor Feltrinelli not to publish the book and to return the typescript to Moscow. After Signor Feltrinelli had resisted all such attempts and had been bitterly reproached by the Italian Communist Party, of which he was still a member at the time, a telegram had arrived from Mr. Pasternak asking that publication of *Dr. Zhivago* should be dropped and the typescript returned. Both Signor Feltrinelli and he himself [Signor d'Angelo] felt that this telegram was not an expression of Pasternak's free will, and Signor Feltrinelli refused to abandon publication because, in accordance with the contract, he had already sold the English and French rights to publishers in London and Paris. Thus, even if the Italian edition had been abandoned, the British and French editions would have appeared; moreover, Signor Feltrinelli felt that by publishing *Dr. Zhivago* he would be "safeguarding the right of a great work of art to see the light."

In an editorial article on Oct. 24, under the heading "Provocative Attack of International Reaction," the *Literaturnaya Gazeta* described the Nobel award to Pasternak as "a hostile political act directed against the Soviet State." Pasternak himself was described as a "decadent poet," and his novel *Dr. Zhivago* was denounced as "squalid, malicious, and full of hatred for Socialism," "replete with falsehoods and hypocrisy," and "the biography of an evil-minded philistine and enemy of the revolution, seized upon by the reactionary press as a means of fanning the flames of the cold war."

Literaturnaya Gazeta asserted that the Swedish adjudicators – "tools of international reaction" – had conferred the Nobel Prize on Pasternak "on the basis of the single fact of the publication of Pasternak's novel *Dr. Zhivago* in a number of capitalist countries, as all his other works are almost unknown in the West." After saying that *Dr Zhivago* had been rejected by Soviet magazines and publishing houses in 1956 [see below] as "a counter-revolutionary and slanderous work, full of hatred for the people and their achievements," *Literaturnaya Gazeta* added that "the ludicrous attempts to extol this year's Nobel Prizewinner are in sharp contrast to the indifference shown by the adjudicators in the past . . . to such titans of world literature as Tolstoy, Chekhov, and Maxim Gorky, who were never considered worthy of the award. . . ."

On the following day *Literaturnaya Gazeta* published a letter which had been sent to Pasternak in September 1956 by the editors of *Novy Mir* explaining why *Dr. Zhivago* could not be accepted for publication in the Soviet Union; this letter, running to 7,500 words, contained an exhaustive analysis of the novel to support the contention that it was "deeply unjust," "historically unobjective," "anti-democratic," and "alien to any kind of understanding of the interests of the people." In a covering letter to *Literaturnaya Gazeta*, the editorial board of *Novy Mir* expressed "the disgust and contempt which all Soviet writers feel for Pasternak's shameful and unpatriotic attitude."

A still more violent attack on Pasternak was made in a *Pravda* article on Oct. 26 written by the veteran journalist David Zaslavsky.

Zaslavsky described Boris Pasternak as a "self-enamoured narcissist" and a "malevolent philistine" who had "succumbed to the flattery of the siren of foreign propaganda"; the novel *Dr. Zhivago* was described as "low-grade reactionary hackwork" and its central character as "a petty bourgeois with petty feelings and rotten thoughts." Zaslavsky predicted that "an inglorious end lies in store both for the resurrected Judas, Dr. Zhivago, and his author, whose only reward will be the contempt of the people."

On Oct. 28 *Literaturnaya Gazeta* announced that the Union of Soviet writers had unanimously decided to expel Pasternak from membership because of his "political and moral degradation" and his "betrayal of the Soviet people and the cause of Socialism." Three days later Moscow Radio announced that a congress of 800 Soviet writers had unanimously asked the Soviet Government to "deprive the traitor Boris Pasternak of Soviet citizenship."

Moscow Radio also quoted a violent condemnation of Pasternak made by the Komsonol (youth) leader Vladimir Semichastny, who in a public speech compared Pasternak with "a pig that fouls its own sty," accused him of "spitting in the faces of our people," and urged that he should be allowed to leave the Soviet Union so that he could "breathe capitalist air."

Mr. Pasternak himself had sent a telegram to the Swedish Royal Academy of Literature on Oct. 24 expressing his pleasure at the receipt of the Nobel Prize, and his hope that he would be able to visit Stockholm to receive it in person. On Oct. 29, however, he sent a letter to the Academy announcing his decision "to give up the undeserved prize I have been awarded," in view of "the meaning attributed to this distinction in the community to which I belong."

On Oct. 31 Mr. Pasternak sent the following personal appeal to M. Khrushchev, the Soviet Prime Minister:

"From a speech made by Comrade Semichastny [see above] I have learned that the Government would not put obstacles in the way of my leaving the U.S.S.R. This is impossible for me. I am linked with Russia by my birth, my life and my work.

"I cannot imagine my life separated from Russia and outside Russia. Whatever my mistakes and errors, I could never have imagined that I would find myself the centre of a political campaign like that which has been stirred up around my name in the West. Realizing this, I have informed the Swedish Academy of my voluntary rejection of the Nobel Prize.

"To leave my motherland would be the equivalent of death for me, and I therefore request that this extreme measure be not taken in relation to me. With all sincerity, I have done something for Soviet literature and may still be able to serve it."

The Tass Agency issued the following statement on Nov. 1 in connexion with Mr. Pasternak's letter to Mr. Khrushchev:

"The Soviet State will not create any obstacles if Pasternak expresses a desire to go abroad to receive the prize awarded to him. Stories in the capitalist press alleging that Boris Pasternak has been refused an exit visa are crude inventions. Pasternak has so far not applied to any Soviet State organs with a request that he be granted an exit visa, and these organs have not had and will not have any objections to issuing an exit visa to him.

"In the event of Boris Pasternak wanting to leave for good the Soviet Union, whose social system and people he has slandered in his anti-Soviet work *Dr. Zhivago*, the official organs will not place obstacles in his way. He will be provided with the opportunity to leave the Soviet Union and experience all the blessings of the capitalist paradise."

Boris Pasternak subsequently issued a personal statement which was published in *Pravda* on Nov. 6 and ran as follows:

"I considered the award of the Nobel Prize as a literary distinction; I was delighted, and expressed this in a cable to Anders Oesterling, the secretary of the Swedish Academy. But I was mistaken. . . .

When I saw the scope of the political campaign around my novel and realized that this award was a political step which has led to monstrous consequences, I voluntarily relinquished the prize on my own initiative and without any compulsion.

"In my letter to Nikita Sergeyevich Khrushchev, I declared that I had been linked with Russia by birth, life, and work, and that it was inconceivable for me to leave Russia and go into exile abroad. I had in mind not only my ties with the Russian land but also with her people, her past, her glorious present and future. But between myself and these ties there arose a barrier of obstacles engendered by the novel through my own fault.

"I never had any intention of harming my country or my people. The editorial board of *Novy Mir* warned me that the novel might be understood by readers as a work directed against the October Revolution and the foundations of the Soviet system. I did not realize this, and now regret it. . . . It seems that I assert that each revolution is historically illegitimate and that the October Revolution was such an illegitimate event which brought Russia misfortunes and led to the destruction of the Russian hereditary intelligentsia. I realize that I cannot accept such assertions carried to absurdity. Yet my work, which was awarded a Nobel Prize, gave grounds for such grievous interpretation, and this is the reason why in the end I rejected the prize.

"If publication had been suspended, as I requested of my publisher in Italy (the editions in other countries were put out without my knowledge), I would probably have succeeded at least partially in correcting this. But the book has been printed and it is too late to talk of this.

"I have not been persecuted, I have not risked either my life or my freedom, I have definitely risked nothing. I should like to re-emphasize that all my actions are voluntary. My friends know full well that nothing in the world could ever compel me to lie or to act against my conscience. It goes without saying that no one has put any pressure on me and that I am making this statement of my own free will. . . . I believe I shall find the strength to restore my good name and the lost confidence of my comrades."

The Soviet campaign against Boris Pasternak, and in particular his expulsion from the Union of Soviet Writers, was strongly denounced by writers' associations in Sweden, Norway, Denmark, Britain, and many other countries, and also by the International P.E.N. A group of eminent British writers appealed to the Union of Soviet Writers not to dishonour the great Russian literary tradition "by victimizing a writer revered throughout the entire civilized world"; the signatories included T. S. Eliot, Somerset Maugham, Stephen Spender, E. M. Forster, Graham Greene, Sir Maurice Bowra, J. B. Priestley, Aldous Huxley, Sir Julian Huxley, Rebecca West, and Lord (Bertrand) Russell.

Protests at the treatment accorded to Pasternak were made by all the Swedish political parties except the Communists, while the Norwegian Labour Party organ *Arbeiderbladet* described it as "one of the most shocking proofs yet of the regimentation of minds and the iron discipline to which intellectuals in Eastern Europe are subjected." In Delhi, Mr. Nehru said that Indians respected Boris Pasternak as a great literary figure and were "pained" by the attacks on him in the Soviet press.—(Soviet Embassy Press Department, London - Times - Manchester Guardian - Svenska Dagbladet, Stockholm - Arbeiderbladet, Oslo) **(Prev. rep. Boris Pasternak, 16523 A.)**

A. TURKEY. — Opening of Atatürk University.

The new Ataturk University at Erzerum, designed to serve the needs of eastern Anatolia, was opened on Nov. 17 in the presence of President Bayar and M. Adnan Menderes, the Prime Minister. Under a contract with the U.S. International Co-operation Administration, teachers and equipment are being provided by the University of Nebraska, which drew up the blueprints for the new foundation in collaboration with Turkish educationists. Atatürk (named after the founder of modern Turkey) is the sixth Turkish university, two of the others being at Istanbul, two at Ankara, and one at Izmir.
(Turkish Embassy Press Department, London) **(15624 B.)**

B. SOVIET UNION. — Abolition of Ministries of Trade and Grain Products. - Trade Functions transferred to Union Republics.

It was announced in Moscow on Nov. 27 (*a*) that the Ministry of Trade had been abolished and its functions transferred to the Union Republics; (*b*) that the Ministry of Grain Products had also been abolished; and (*c*) that a State Committee for Grain Products had been set up under the chairmanship of M. Leonid Korniets, formerly Minister of Grain Products. The Trade Ministry was abolished "with a view to further extending the rights of the Union Republics and enhancing their role in the development of Soviet trade."—(Soviet Embassy Press Department, London) **(Prev. rep. 16428 A; 15992 A; 15575 A.)**

C. ITALY. — Ten-year Education Programme.

A 10-year education programme to be carried out during the years 1959-1968 was approved on Sept. 11 by the Italian Cabinet. It provided for a total extraordinary expenditure of 1,386,000 million lire (£796,436,655) during this period, in addition to ordinary budgetary expenditure on education. Between 50,000 million and 55,000 million lire was allocated for the implementation of the plan during the financial year July 1, 1958 to June 30, 1959, rising progressively to a maximum of 250,000 million lire annually.

The plan envisages the construction of 150,000 new classrooms at an estimated cost of 600,000 million lire, and the training of 70,000 additional teachers and lecturers. Large sums will also be provided for new kindergartens, new elementary schools, extension and modernization of school laboratories, improvement of school libraries, and increased training facilities at universities, technical colleges, vocational training establishments, and scientific institutions.

The basis of the plan is the effective implementation of a school-leaving age of 14, as laid down in the post-war Constitution, with the aim of completely eradicating illiteracy. According to the last (1951) census 12.9 per cent of the population had never been to school, and even now it is estimated that about 200,000 children do not receive a proper school education, either because of the lack of teachers or because their parents prefer to utilize their labour at home; these conditions apply particularly to Southern Italy (the *Mezzogiorno*), which has for centuries been an impoverished and under-developed area.

It was considered that the 10-year plan could be financed without new taxation, and that the necessary sums would be provided by a continued increase in the national income during the coming decade and a corresponding increase in the Government's revenue from existing taxes.

In a press statement on Oct. 2, Signor Fanfani (the Prime Minister) said that the 10-year plan was regarded as of the utmost urgency, since it was designed to remedy existing defects in the Italian educational system and to bring it into line with standards in other European countries. He described the plan as one of the most important measures introduced since the war, and as comparable with the large-scale programme for the economic development and rehabilitation of southern Italy.
(Giornale d'Italia, Rome - Corriere della Sera, Milan)

D. UNESCO. — New Director-General.

Dr. Vittorino Veronese, of Italy, was elected Director-General of the U.N. Educational, Cultural and Scientific Organization (Unesco) on Nov. 22 in succession to Dr. Luther Evans (U.S.A.), who had tendered his resignation eight months before his term of office was due to expire.

Dr. Veronese (48) was born at Vicenza, the son of an elementary school-teacher. A lawyer and economist, he taught at the Social Science Institute in Rome, became secretary of the Roman Catholic university teachers' movement, and from 1944 to 1952 was president of the Italian Catholic Action, in which capacity he collaborated closely with the late Signor De Gasperi. Dr. Veronese had been a member of the Executive Board of Unesco since 1952, and its chairman since 1956.

The new Director-General was elected at the general conference of Unesco held at the Organization's new headquarters in Paris. The Soviet delegation tried to block the election of Dr. Veronese by proposing that Dr. Evans's mandate should run its course until its expiration in July 1959; this was rejected by a large majority, and Dr. Veronese was elected by 55 votes to 20, with four abstentions and two members absent. The appointment is for six years, dating from Dec. 6.
(U.N. Information Centre, London - Giornale d'Italia, Rome) **(Prev. rep. Dr. Evans, 12992 F.)**

E. UNITED KINGDOM. — Government Changes.

Three junior ministerial changes were announced from Downing-street on Nov. 28, as follows: (1) Mr. J. D. Profumo (43) as Joint Parliamentary Under-Secretary of State, Foreign Office, in succession to Mr. Ian Harvey, who had resigned from the Government and from Parliament on Nov. 24; (2) Mr. Julian Amery (39) as Parliamentary Under-Secretary of State, Colonial Office, *vice* Mr. Profumo; (3) Mr. Hugh Fraser (40) as Parliamentary Under-Secretary of State and Financial Secretary, War Office, *vice* Mr. Amery. Mr. Fraser, who entered the Government for the first time, is Conservative M.P. for Stone (Staffordshire) and a brother of Lord Lovat.
(Times - Daily Telegraph) **(Prev. rep. 16465 B.)**

A. UNITED KINGDOM. — Steel Industry. - New Strip Mills for Monmouthshire and Lanarkshire. - Production Statistics. - Fall in Output and Demand. - Ending of Scrap Controls.

Mr. Macmillan announced in the House of Commons on Nov. 18 that the Government had decided to authorize the construction of two major steel strip mills, each of 500,000 tons initial capacity, to be built respectively by Richard Thomas and Baldwins Ltd. at Newport (Mon.) and by Colvilles Ltd. in Lanarkshire.

After explaining that the Iron and Steel Board had concluded that additional capacity for the production of strip mill products was required to meet the future needs of the national economy, Mr. Macmillan continued . " The Government have decided to issue an Industrial Development Certificate for a project to be undertaken by Richard Thomas and Baldwins Ltd. at Newport, Monmouthshire. This will represent the first stage of a major expansion of strip mill production in South Wales. Its precise nature, timing, and financing are under discussion between the interested parties, including the company and the Iron and Steel Board, but it is envisaged that the initial production capacity will be of the order of 500,000 tons for sheet and tinplate. It is not yet possible to give an estimate of the cost.

" The board of Colvilles Ltd have agreed in principle to undertake the other project in association with their new Ravenscraig works at Motherwell [see 16315 A] and their existing works at Gartcosh, both in Lanarkshire. The Government are prepared to grant an Industrial Development Certificate for this purpose. It is intended that this project, which includes modernization of existing plant, should have an initial productive capacity of approximately 500,000 tons for sheet and light plate. It will make use of facilities already being provided by the company, and the additional cost is estimated at about £50,000,000. The initial capacity for sheet will represent a surplus above present Scottish consumption and will, I hope, attract to Scotland new industries using sheet.

" Both projects will be capable of substantial extensions, particularly that in South Wales. To the extent that their construction will require funds additional to the resources of the two companies, the necessary amounts will be advanced to them by the Government. Details of the final arrangements will be available in due course."

In reply to **Mr. Gaitskell** (Leader of the Opposition), **Mr. Macmillan** said that the terms on which the Government would provide the money for Colvilles (a de-nationalized company) had been agreed in principle, but could not yet be disclosed ; they would fully protect the taxpayers' interests, however. Answering **Mr. Gower** (C.), he said that site clearance at Newport would probably start in 1959, and the Newport project would be completed in four or five years. As regards the Scottish scheme, which would be built round or near existing plant, a good deal of the initial work had already been done. Replying to **Mr. James Griffiths** (Lab.), who stressed that the building of the Newport strip mill would inevitably lead to the closing of further small steelworks in west South Wales, with a consequent rise in unemployment, the **Prime Minister** claimed that the choice of the Newport site was justified by its economic advantages. Finally, Mr. Macmillan informed **Mr. Malcolm Macpherson** (Lab.)—who had strongly criticized the decision to divide up the new production capacity, instead of concentrating it in a single integrated unit in Scotland—that even if technical arguments in favour of the single integrated plant had not proved insuperable, it would have been unlikely that such a plant would have been located in Scotland.

A proposal for the construction of a large integrated steel strip mill, as recommended by the Iron and Steel Board, had been under consideration at Cabinet level for upwards of 18 months, the cost being unofficially estimated at up to £200,000,000. The Government's chief difficulty was to decide on its location, for whereas Richard Thomas and Baldwins had proposed the siting of a new mill at Newport, to cost about £160,000,000 (see 15820 A), competing claims had been put forward for Kidwelly (Carmarthenshire) in view of the high unemployment rate in western South Wales, as well as for Immingham (Lincolnshire), Grangemouth (Stirlingshire), and Lanarkshire.

The reasons for the Government's decision were explained on the same day by Mr. Henry Brooke, the Minister for Welsh Affairs, and by Mr. Maclay, Secretary of State for Scotland.

Mr. Brooke, after describing the Newport project as " a massive and outstanding industrial development for South Wales," continued : " On sociological grounds it would have been very good if the plant could have gone to west South Wales, and the possibility of going to Kidwelly was carefully examined. It was found that the difficulties were insuperable. Transport costs would have been substantially higher than at Newport, and to have built a new steel works and strip mill there would have sterilized hundreds of millions of tons of coal underground. We should have been sacrificing a very large employment-giving capacity in the future."

Mr. Maclay stressed that Colville's expansion would bring the eventual capacity of the strip mills in Lanarkshire to 1,000,000 tons a year, or " double the present Scottish consumption of strip." Scotland would therefore be favourably placed for attracting new light industries whose basic raw material was steel strip, and this should prove " a great help in providing new employment and a greater diversification of industry."

It was stated in the Press that the Newport plant would probably be expanded to an eventual capacity of 3,000,000 ingot tons a year, giving employment to some 4,000 workers. The initial stage in Scotland would probably provide jobs for 3,500 steel workers, besides the large building force needed.

Steel Production in Third Quarter of 1958.

A further decline in the production of steel and pig-iron took place in the third quarter of 1958, output of each commodity being about 17 per cent lower than in the corresponding quarter of 1957 ; demand for steel was also lower than in the same period of 1957. The Iron and Steel Board explained that the main decline in deliveries had been to the export trade and, in the home trade, to collieries, rolling-stock builders, shipbuilders, and constructional engineers ; deliveries of steel to consumer industries, however, had been maintained. The Board added that the reduction in home consumption was partly due to the " running down " of stocks by consumers.

Detailed production figures for the quarter are given below, with figures for the third quarter of 1957 for comparison :

	1958		1957	
	Weekly Average Tons	Annual Production Tons	Weekly Average Tons	Annual Production Tons
	Steel Ingots and Castings.			
July ..	315,900	16,426,000	362,500	18,848,000
August .	299,200	15,558,000	373,400	19,417,000
September	368,600	19,167,200	438,200	23,789,000
Third Quarter .	327,900	17,050,400	291,366	20,684,366
	Pig-Iron.			
July . .	227,000	11,805,000	263,400	13,695,000
August ..	221,000	11,492,000	272,500	14,169,000
September	230,900	12,006,800	282,700	14,698,000
Third Quarter .	226,300	11,767,933	272,866	14,187,333

Other recent developments relating to the iron and steel industry are summarized below under cross-headings :

Iron and Steel Board's Report for 1957. - Expected Rise in Capacity. The report of the Iron and Steel Board for 1957 was published on Aug. 6. The Board attributed the shortfall of steel production (21,700,000 tons—see 15986 A), as compared with estimated capacity, to three factors . (1) reduced demand for steel sheet and tinplate from the older mills ; (2) the rise in Bank Rate and tighter credit restrictions ; (3) delay in completing certain finishing plant. It stated that home-produced steel (except plate and sheet) had exceeded home consumption during the year, but that exports had risen by 450,000 tons, whilst imports had fallen to half the 1956 figure Workers' average earnings had risen from £13 2s to £13 18s., or six per cent. Wage costs per ton of steel produced had risen since 1954 by 22 per cent, whilst output had risen by 15 per cent and the numbers employed by 7¼ per cent.

The report stated that it was intended later in 1958 to " make a further appraisal of demand in conjunction with Government departments, the industry itself, and the leading consumers' organizations, and to carry the enquiry forward at least until the mid-1960s." Pending the result of this appraisal, the Board regarded the recent drop in demand as " probably short-lived," and had decided that " the objectives of the development programme should in general remain unaltered and be pursued so far as practicable." British capacity for crude steel was expected to rise to about 27,000,000 tons by 1962 and to 27,500,000-28,000,000 tons by 1963.

Ending of Scrap Control. The Parliamentary Secretary to the Ministry of Power (Sir Ian Horobin) announced on July 31 that, owing to the improvement in scrap supplies, the Government had decided to remove controls over the price and distribution of iron and steel scrap and to revoke the Iron and Steel Scrap Order from Nov. 1. Simultaneously, the Board of Trade announced that from Aug. 4 it would be prepared to consider applications for the export of limited quantities of scrap and old metal, except to ports or countries of the Sino-Soviet bloc.

Mr. Maudling (the Paymaster-General) announced on Dec. 2 that the Minister of Power, in consultation with the President of the Board of Trade, had decided to allow for the next two months the free export of all kinds of iron and steel scrap, except scrap derived from armaments or of an f.o.b value exceeding £25 a ton. The decision would be given effect by an open general licence to be issued on Dec. 5 and valid until Feb. 4, 1959. Specific licences would be granted for the export of scrap of a higher value than £25 a ton, and the whole situation would be reviewed before February 1959 to enable the Government to " judge the effect of this freedom and see how many of these large orders can be released in practice."

Resale of Steel Company. It was announced on Sept. 23 that the Iron and Steel Holding and Realization Agency had sold the entire issued share capital of the Millom and Askam Iron Co. Ltd. and the Hodbarrow Mining Co. Ltd. to Close Brothers Ltd. and Cyril Kieft and Co. Ltd., acting jointly as agents for Mr. J. H. Fischel and Raine (Holdings) Ltd. The purchase price was £1,700,000, and in addition ISHRA had received a special distribution of £500,000 from Millom and Askam out of that company's reserves. The total proceeds accruing to ISHRA therefore amounted to £2,200,000, whereas the net book value of its investment in the two companies was only £1,356,210.

Closing of Glasgow Pig-Iron Plant. Colville's Ltd. announced on Nov. 5 that the Glasgow works of its subsidiary, Dixon's Ironworks Ltd. (see 13862 D), would be closed at the end of November. It was explained that the closing was directly due to trade conditions but was in line with Colville's policy of shutting down older and less economic plant. Of the 500 workers formerly employed at Dixon's, 300 had been paid off when pig-iron production ceased in June and the remainder had since been given notice. Dixon's Ironworks is one of the oldest plants in Scotland, having been established in 1839.

The Consett Iron Co. Ltd. announced on Nov. 9 that it would erect new plate mills and additional steel making plant, expected to take three years to complete and to cost about £28,000,000. The project would be financed independently of the Stock Exchange, the company itself finding up to £10,000,000 from its own resources, borrowing £4,500,000 from each of its two bankers (Barclays and Lloyds), and obtaining the remaining £9,000,000 from the Finance Corporation for Industry. In return for this loan the F.C.I. would have the option, up to Sept. 30, 1965, of acquiring up to £1,000,000 of the company's unissued Ordinary shares at par.

A. CANADA. — Federal By-elections. - Revised Party Strengths in House of Commons.

By-elections to the Canadian House of Commons were held at Grenville-Dundas (Ontario) and Montmagny-l'Islet (Quebec) on Sept. 29, results being as follows:

Grenville-Dundas.

Casselman, Mrs. Jean (Progressive Conservative)	10,738
Salmon, Mark P. (Liberal)	5,617
No change. Progressive Conservative majority	5,121

The by-election was caused by the death of Mr. A. Clair Casselman (the husband of Mrs. Casselman), who had held the constituency since 1924 in 11 consecutive general elections. Mrs. Casselman is the third woman member in the present House of Commons.

***Montmagny-l'Islet.**

Fortin, Louis (Progressive Conservative)	7,656
Blanchet, Bernardin (Liberal)	6,644
Progressive Conservative gain from Liberal. Majority	1,012

* Excluding results from one district.

The by-election was caused by the election of Mr. Jean Lesage (a former Minister of Natural Resources) to the Liberal Party leadership in Quebec Province. Mr. Fortin is a lawyer.

The original result of the general election in April last—209 seats for the Progressive Conservatives, 48 for the Liberals, and eight for the C.C.F.—was subsequently revised when the constituency of Renfrew North, first attributed to the Progressive Conservatives, was found to have been held by the Liberals, following the counting of Servicemen's postal votes; Progressive Conservative representation was thus reduced to 208 and that of the Liberals increased to 49. The result of the above-mentioned by-elections, and the death a week earlier of the Progressive Conservative member for Springfield (Manitoba), altered the strengths of the two major parties to 208 Progressive Conservatives and 48 Liberals, with one seat vacant.

B. FRANCE - SOUTH VIETNAM. — Agreement on French Economic Aid. - Vietnamese Acquisition of French-owned Ricelands.

An agreement was signed in Saigon on Sept. 10 by Vice-President Nguyen Ngoc Tho and the French Ambassador, M. Jean Payart, whereby the French Government agreed to release 1,490,000,000 francs to the South Vietnamese Government for the purchase of French-owned ricefields in South Vietnam.

The agreement provided that owners of such fields would have the choice, within two months, either of accepting purchase under its terms or of submitting to the land reform and nationalization decree of the South Vietnamese Government; if they chose the latter, they would not be allowed to retain the 100 hectares of land left to other owners of larger estates. A joint French-Vietnamese commission would work out the price of the ricelands affected in the various parts of the country, and owners opting for acceptance of the terms of the agreement would receive payment from the funds released by France.

The total area of ricelands affected is over 200,000 hectares, prices varying between 1,400 and 45,000 francs per hectare according to location.—(Le Monde - Vietnam Press, Saigon)

C. WALES. — Minister for Welsh Affairs appointed Chairman of Council for Wales and Monmouthshire. - Resignations from Council.

Mr. Macmillan announced on Nov. 14 that he was taking the "exceptional action" of appointing Mr. Henry Brooke, the Minister for Welsh Affairs, as chairman of the Council for Wales and Monmouthshire, in succession to Alderman Huw T. Edwards, who had resigned on Oct. 25.

Alderman Edwards had been chairman of the Council for Wales and Monmouthshire since it was set up in 1949 by Mr. Herbert Morrison—then Lord President of the Council—to advise the Government on Welsh affairs. He resigned because he felt that the Council's work was being "frustrated" by the Government's "persistent refusal" to accept the advice tendered; in particular, he instanced the Prime Minister's rejection in 1957 of the Council's recommendation that he should appoint a Secretary of State for Wales with wide executive responsibility, and that Welsh departments should be given greater authority and independence. Alderman Edwards had described the rejection of this proposal as "a snub to Wales" and had said that there was "no hope of Whitehallism ever understanding Welsh aspirations."

In a letter sent on Nov. 14 to the remaining members of the Council, the Prime Minister expressed regret at Alderman Edwards' resignation and explained that he was "most anxious" to see developed "a much closer and more fruitful relationship between the Council and the Government." After referring to the "wide measure of agreement that it would be right to consider further how this might be achieved as part of a general stocktaking and review of the Council's functions and of the way in which it could best serve Welsh interests in the future," Mr. Macmillan continued:

"In these exceptional circumstances, with the Council suddenly and unexpectedly left without a chairman, I propose to take exceptional action. To fill the vacancy caused by Alderman Edwards' resignation I have decided to appoint the Minister for Welsh Affairs as a member of the Council for the period ending Sept. 30, 1959, and I have further decided to appoint him as chairman of the Council until a new Council is appointed next year. This, therefore, is a temporary measure for the remainder of the present Council's term of office, but these will be the vital months during which a review of the Council's work can be carried out before it falls to be reconstituted next autumn. During these months I hope, too, that the Council will be able to study further and advise upon a number of current questions that are important to Wales."

Mr. Macmillan added that he proposed to appoint a Welsh-speaking Welshman to fill a second vacancy on the Council caused by the death of Alderman Emyr Williams

Mr. Brooke's appointment aroused strong criticism among leading members of the Council for Wales.

Sir William Jones (chairman of the Council's government and administration panel, and one of those who had urged the appointment of a Secretary of State for Wales) described the appointment of a non-Welshman as the Council's chairman as "an insult to Wales" and "the last straw." He stressed that the Council's constitution laid down that the appointment of its chairman was "a matter for the Council itself," and that a meeting had already been called for Nov. 28 "for the specific purpose of electing a chairman." Mr. Ernest Hickery, chairman of the Council's industrial panel, also described Mr. Macmillan's action as "unconstitutional," whilst Mr. Dafydd Williams, chairman of the tourist industry panel, called it "an unwarranted interference with the Council's independence." Mr. Williams added that Mr. Brooke's appointment broke "the pledge categorically stated by the Prime Minister in the White Paper issued in December 1957 [see 15911 A], in which he had said: 'It is right that the Council should be wholly independent of the Government so that it can give unfettered advice.'"

Certain other members of the Council, however, approved of Mr. Brooke's appointment as likely to result in a closer relationship between the Council and the Government.

When the Council met on Nov. 28 under Mr. Brooke's chairmanship, Sir William Jones, Mr. Dafydd Williams, and a third member, Mr. Richard Davies, resigned on the ground that Mr. Brooke's appointment was "unconstitutional" and would prevent the Council from carrying out its function of providing the Government with independent advice on Welsh affairs. A fourth member of the Council, Mr. W. Trevor Vaughan, tendered his resignation on Dec. 1.

It had previously been announced on Nov. 26 that Mr. Macmillan had invited Sir Ifan ab Owen Edwards, founder-president of the Welsh League of Youth, to fill the vacancy on the Council caused by the death of Mr. Emyr Williams. Sir Ifan had accepted on the basis that his appointment, in common with that of all other present members of the Council, should only run until Sept. 30, 1959, and that in the meantime the opportunity would be taken to review the Council's work and future.

DECEMBER 6—13, 1958

A. FRANCE.—The Constitution of the Fifth Republic.

The text of the new Constitution of the Fifth Republic was published in Paris on Sept. 4, after final approval by the French Cabinet and detailed study by the 39-man Consultative Committee set up by General de Gaulle's Government under the provisions of the Constitutional Reform Act passed by the French Parliament on June 2-3 (see page 16284).

The Consultative Committee consisted of 16 deputies appointed by the Universal Suffrage Commission of the National Assembly, ten senators nominated by the Council of the Republic, and 13 members appointed by the Government. It was presided over by M. Paul Reynaud, who, although a member of the National Assembly, was one of the Government-nominated members.

The 13 Government-nominated members were M. Paul Reynaud (Independent), Prime Minister in 1940; M. Maxime Blocq-Mascart, a member of the Council of State; M. Hamza Boubakeur, director of the *Institut Musulman* in Paris; M. Alfred Bour, former vice-president of the *Conseil supérieur de la magistrature;* Professor Jacques Chardonnet, of the *Institut d'études politiques* in Paris; M. René Chazelle, a magistrate, and Socialist *conseiller-général* for Haute-Loire; M. Roger Frey, secretary-general of the Social Republican (Gaullist) Party; Professor Marc Lauriol, of the *Ecole supérieure de commerce* in Algiers; M. André Malterre, a senior Civil Servant and president of the *Confédération générale des cadres;* M. Léon Noël, the former diplomat, and a Gaullist deputy from 1951 to 1956; M. Roland Pré, president of the Bureau of Mines for Overseas Territories (*Bureau minier d'outre-mer*); M. Van Graefschepe, vice-president of the *Fédération nationale des syndicats d'exploitants agricoles;* and Professor Marcel Waline, of the Law Faculty in the University of Paris.

The 16 representatives of the National Assembly comprised four Independents (MM. Edmond Barrachin, Robert Bruyneel, Jacques Fourcade and André Mignot), three Socialists (MM. Paul Alduy, Philibert Tsiranana and René Dejean, the last-named being president of the Universal Suffrage Commission), two M.R.P. deputies (MM. Paul Coste-Floret and Pierre-Henri Teitgen), one Radical (M. Lucien Degoutte), one Dissident Radical (M. Albert de Bailliencourt), one R.G.R. deputy (M. Jean-Paul David), one Social Republican (M. Raymond Triboulet), one ex-Poujadist (M. André Guérard), and two representatives of the leading African parties—M. Gabriel Lisette (R.D.A.) and M. Léopold Senghor (P.R.A.).

The ten senators on the Committee were MM. Marcilhacy, Monichon and Valentin (Independents), Champeix and Nayron (Socialists), Gilbert Jules and Raybaud (*Gauche Démocratique*), de Menditte (M.R.P.), de Montalembert (Social Republican) and Lamine-Gueye (P.R.A.).

The constitutional text was essentially the work of a small ministerial committee consisting of the Minister of Justice (M. Michel Debré of the Social Republican party), who acted as chairman, and the four Ministers of State—M. Mollet (Socialist), M. Pflimlin (M.R.P.), M. Jacquinot (Independent), and M. Houphouet-Boigny (P.R.A.). A preliminary draft had been published on July 29 and submitted to the Consultative Committee, which was asked to examine it and make recommendations to the Government within 20 days.

Among many fundamental changes introduced by the new Constitution, those appertaining to the powers and position of the President of the Republic were among the most important. Under the new Constitution, the President of the Republic will appoint the Prime Minister; will have power to dissolve the Assembly (providing it has been in existence one year) after consulting the Prime Minister and the presidents of both Houses; may assume special powers in an emergency; and may submit disputed legislation to a national referendum at the request of the Government or of both Houses of Parliament. He will be elected for seven years by an electoral college consisting of the two Houses of Parliament, the departmental general councils, overseas assemblies, and elected representatives of the municipal councils, and will be eligible for re-election.

The Prime Minister will be appointed by the President (instead of being invested by the National Assembly, as in the Fourth Republic), but he and the Cabinet will be responsible only to Parliament. The Prime Minister will be assumed to have the Assembly's confidence unless the Opposition moves a motion of censure signed by at least one-tenth of the deputies. Such motion of censure must be approved by an absolute majority; if defeated, its sponsors must not introduce another no-confidence motion in the same parliamentary session. Ministers will have to relinquish their parliamentary seats on entering the Cabinet.

The French Parliament will consist of the National Assembly and the Senate (the latter body reverting to the name it enjoyed under the Third Republic, and the designation Council of the Republic being abolished). Bills can be presented in either House with the exception of money Bills, which must originate in the National Assembly. If disputes arise between the two Houses, the National Assembly will have the final word. Parliament will sit for a maximum of 5½ months each year, and may also meet in extraordinary session for 12 days at the request of the Prime Minister or of a majority of the Assembly. Voting rights will be personal and can only be delegated in special circumstances (delegation of voting was common under the Fourth Republic).

Each overseas territory was given three choices under the Constitution: (1) full integration with France as a *département* of the French Republic (i.e. the status enjoyed by the four oversea *départements* of Guadeloupe, Martinique, Réunion, and French Guiana); (2) retention of its present territorial status, with the right to representation in the French Parliament as hitherto; or (3) entry into a federal "French Community" as a fully autonomous unit in which each member would direct its own affairs, with the Community controlling such matters as foreign policy, defence, and joint economic and financial policy. The Community would possess a president (the President of the Republic) an Executive Council, a Senate, and a Court of Arbitration. (The effect of this provision was to abolish the provisions of the 1946 Constitution relating to the French Union). Rejection of the new Constitution by any colony would imply immediate secession from France.

A Constitutional Council would be set up consisting of nine members (of whom the President of the Republic would designate three, in addition to the chairman) and all living ex-Presidents. It would have responsibility for supervising all elections and referenda, and would have to be consulted on constitutional questions and before the President of the Republic assumed emergency powers. It would also determine, at the request of the Government, whether a President was temporarily or permanently prevented from exercising his functions.

The full text of the Constitution of the Fifth Republic is as follows; the italicized paragraphs in parentheses explain the changes made as compared with the Government's original draft, and in response to suggestions by the Consultative Committee.

Preamble.

"The French people solemnly proclaims its attachment to the Rights of Man and to the principles of national sovereignty as defined by the Declaration of 1789, confirmed and completed by the preamble of the Constitution of 1946.

"By virtue of these principles and that of the free determination of peoples, the Republic offers to those overseas territories which manifest their desire to adhere to them new institutions founded on the common ideal of liberty, equality and fraternity, and conceived with a view to their democratic evolution."

[*Two additions were made in the text as compared with the initial draft: (1) insertion of the words "free determination of peoples," as suggested by the Consultative Committee; (2) insertion of the words "with a view to their democratic evolution," added by the Government.*]

Art. 1. The Republic and the peoples of the overseas territories who, by an act of free determination, adopt the present Constitution institute a Community. The Community is founded on the equality and the solidarity of the peoples composing it.

[*This Article was originally part of Section XII—The Community (see below). Its final wording conformed closely to the proposals of the Consultative Committee.*]

Section I.—Sovereignty.

Art. 2. France is an indivisible, secular, democratic and social Republic. It assures the equality before the law of all citizens without distinction of origin, race or religion. It respects all beliefs.

The national emblem is the Tricolor flag of blue, white and red.

The National Anthem is the *Marseillaise.*

The motto of the Republic is *Liberté, Egalité, Fraternité.*

Its principle is government of the people, by the people, and for the people.

[*The second and third sentences in the first paragraph were added by the Government in the final version.*]

Art. 3. National sovereignty resides in the people, which exercises it through its representatives and through the referendum.

No part of the people, nor any individual, can attribute to themselves the exercise of sovereignty.

Suffrage may be direct or indirect under the conditions provided for by the Constitution. It is always universal, equal, and secret.

All French citizens of both sexes who have reached their majority and who possess their civil and political rights have the franchise under the conditions determined by law.

Art. 4. Political parties and groups may compete for the expression of the suffrage. They may freely form themselves and exercise their activities. They must respect the principles of national sovereignty and of democracy.

[*This Article was based on a recommendation of the Consultative Committee, which had proposed that an organic law should regulate details of its application. The Government supported the Committee's recommendation in principle but rejected the proposal for a special implementing law; instead, it inserted the phrase that the parties "may compete for the expression of the suffrage" and the sentence that they may "freely form themselves and exercise their activities"—thereby providing a constitutional basis for the existence and activities of the parties.*]

Section II.—The President of the Republic.

Art. 5. The President of the Republic ensures respect for the Constitution. By his arbitration he assures the regular functioning of the public authorities, as well as the continuity of the State. He is the guarantor of national independence, of the integrity of the national territory, and of respect for Community agreements and for treaties.

Art. 6. The President of the Republic is elected for seven years by an Electoral College comprising the members of Parliament, of the [departmental] General Councils and of the Assemblies of the oversea territories, as well as the elected representatives of the municipal councils.

These representatives are: the mayor (*maire*) for communes of less than 1,000 inhabitants; the mayor and his first deputy for communes from 1,000 to 2,000 inhabitants; the mayor, his first deputy, and a municipal councillor for communes from 2,001 to 2,500 inhabitants; the mayor and his first two deputies for communes from 2,501 to 3,000 inhabitants; the mayor, his first two deputies, and three municipal councillors for communes from 3,001 to 6,000 inhabitants; the mayor, his two first deputies, and six municipal councillors for communes from 6,001 to 9,000 inhabitants; all municipal councillors for communes of more than 9,000 inhabitants; and in communes of over 30,000 inhabitants, all municipal councillors as well as delegates designated by the municipal council in the ratio of one delegate for every 1,000 inhabitants above 30,000.

In the overseas territories of the Republic, representatives of the councils of administrative units, elected under conditions to be determined by an organic law, are also members of the Electoral College.

The participation of member-States of the Community in the Electoral College is regulated by agreement between the Republic and those member States. The mode of application will be defined by an organic law.

[*The Government's initial draft did not lay down the composition of the Electoral College, whilst the Consultative Committee's proposals did not envisage any additional representatives for towns above* 30,000 *inhabitants apart from the members of their municipal councils. It was pointed out, however, that the addition of such delegates would only compensate to a small extent for the considerable numerical advantage given to the small communities in their representation in the Electoral College.*]

Art. 7. The President of the Republic is elected by an absolute majority on the first ballot. If this is not obtained, the President is elected on a second ballot by a relative majority.

Voting begins after the Electoral College has been convened by the Government.

The election of the new President takes place 20 days at least and 50 days at most before the expiration of the powers of the President in office.

If the Presidency of the Republic falls vacant, for whatever cause, or if the President is prevented from exercising his functions—as determined by the Constitutional Council at the request of the Government, and by an absolute majority of the Council's members—the Presidential functions, with the exception of those provided for by Articles 11 and 12 below, are exercised by the President of the Senate. In case of a vacancy, or if the Constitutional Council has determined that the President is permanently [i.e. not only temporarily] prevented from exercising his office, voting for the election of a new President takes place within at least 20 days, and at most 50 days, unless the Constitutional Council has decided that *force majeure* makes this impossible.

[*The Government did not accept the Consultative Committee's recommendation that the President should be elected by a joint meeting of both Houses of Parliament, the presidents of the* Conseils Généraux, *and the presidents of the Territorial Assemblies of overseas territories in the event of an absolute majority not being obtained in the two first ballots. Instead, it decided in favour of requiring only a relative majority in the second ballot.*]

Art. 8. The President of the Republic nominates the Prime Minister. He relieves him of his office if the Prime Minister tenders the Government's resignation.

On the Prime Minister's proposal, the President nominates and dismisses the other members of the Government.

[*The second sentence of the first paragraph was a new version, making it clear that the Head of State does not dismiss the Prime Minister but accepts the latter's resignation.*]

Art. 9. The President of the Republic presides over the Council of Ministers (Cabinet).

Art. 10. The President of the Republic promulgates laws within 15 days following their transmission to the Government after their final adoption [by Parliament.] Within this period he may ask Parliament for a new reading of the law or certain of its Articles. This new reading cannot be refused.

Art. 11. On the proposal of the Government during [parliamentary] sessions, or on a joint proposal of the two Assemblies published in the *Journal Official*, the President of the Republic may submit to a referendum any Bill dealing with the organization of public powers, containing approval of a Community agreement, or providing for authorization to ratify a treaty which, without being contrary to the Constitution, might affect the functioning of [the country's] institutions.

When the referendum is in favour of the Bill, the President of the Republic promulgates it within the period provided for in the preceding Article.

[*The Government accepted the Consultative Committee's proposal that it only could demand a referendum during parliamentary sessions.*]

Art. 12. The President of the Republic after consulting the Prime Minister and the Presidents of the Assemblies, may order the dissolution of the National Assembly.

General elections take place within at least 20 days and at most 40 days after the dissolution.

The National Assembly meets on the second Thursday following its election. If this meeting takes place outside the periods of ordinary sessions, a session is rightfully opened for 15 days.

A new dissolution cannot be effected within the year following these elections.

Art. 13. The President of the Republic signs the ordinances and decrees adopted by the Council of Ministers.

He makes all civil and military State appointments.

Councillors of State, the Grand Chancellor of the Legion of Honour, ambassadors and envoys extraordinary, councillors of the Court of Accounts, prefects, representatives of the Government in overseas territories, general officers, rectors of academies, and directors of central administrations are nominated by the Council of Ministers.

An organic law will determine the other posts to be filled by the Council of Ministers, as well as the conditions under which the nominating power of the President of the Republic may be delegated by him or exercised in his name.

Art. 14. The President of the Republic accredits ambassadors and envoys to foreign Powers; foreign ambassadors and envoys are accredited to him.

Art. 15. The President of the Republic is Chief of the Armed Forces (*Chef d'Armées*). He presides over the Higher Councils and Committees of National Defence.

Art. 16. When the institutions of the Republic, the independence of the nation, the integrity of its territory, or the execution of its international commitments are gravely and immediately threatened and the regular functioning of the public authorities is interrupted, the President of the Republic will take the measures required by these circumstances after consultation with the Prime Minister, the Presidents of the Assemblies, and the Constitutional Council. He informs the nation of these measures by message.

The measures must be inspired by the desire to assure to the constitutional public authorities, with the least possible delay, the means of exercising their proper functions. The Constitutional Council must be consulted on these measures.

Parliament meets by right. The National Assembly cannot be dissolved during the exercise of the exceptional powers.

[*The Government did not accept the Consultative Committee's proposal that the Constitutional Council alone should determine whether circumstances justified a recourse to special powers. The last two paragraphs had been recommended by the Constitutional Committee.*]

Art. 17. The President of the Republic exercises the right of pardon.

Art. 18. The President of the Republic communicates with the two Houses of Parliament by messages which are read for him and which are not debated.

Outside its sessions, Parliament is specially convened for this purpose.

[*In the first paragraph the Constitutional Committee had deleted the phrase that the presidential messages should be "read for him," but the Government did not accept this. The second paragraph was inserted in the final version.*]

Art. 19. All acts of the President of the Republic, other than those provided for under Articles 8 [first paragraph], 11, 12, 16, 18, 54, 56 and 61, are countersigned by the Prime Minister and, according to each individual case, by the responsible Minister.

Section III.—The Government.

Art. 20. The Government determines and carries out the policies of the nation.

It has at its disposal the administration and the armed forces.

It is responsible to Parliament under the conditions and according to the procedures provided for in Articles 49 and 50.

Art. 21. The Prime Minister directs the Government's actions. He is responsible for national defence. He ensures the execution of the laws. Subject to the conditions of Article 13, he exercises regulatory power and makes nominations to civil and military posts.

He may delegate certain of his powers to Ministers.

He deputizes, should the need arise, for the President of the Republic as president of the councils and committees mentioned in Article 15.

He may, in exceptional cases, deputize for the President as chairman at Cabinet meetings by virtue of an explicit assignment, and for a specific agenda.

Art. 22. The acts of the Prime Minister are countersigned by the Ministers responsible for their implementation.

Art. 23. Membership of the Government is incompatible with the exercise of any parliamentary mandate, with any professional representation of a national character, and with any public employment or professional activity.

An organic law will determine the conditions under which the holders of such mandates, activities, or employment are replaced.

Replacement of members of Parliament takes place in conformity with the provisions of Article 25.

[*The Consultative Committee had recommended that parliamentarians joining the Government should simply be "granted leave" instead of losing their mandate, but the Government adhered to its original proposal. On the other hand, whilst by-elections were not originally envisaged in such cases, they will now take place whenever a parliamentarian loses his mandate by reason of joining the Government. In the Government's initial draft, incompatibility with ministerial office was confined to those holding parliamentary mandates, in the final draft, however, the categories of those who could not be Ministers and at the same time continue their previous activities was greatly extended—see Article* 23.]

Section IV.—Parliament.

Art. 24. Parliament consists of the National Assembly and the Senate.

The deputies in the National Assembly are elected by direct suffrage.

The Senate is elected by indirect suffrage. It ensures the representation of the local authorities and territorial assemblies (*collectivités territoriales*) of the Republic. Frenchmen living outside France are represented in the Senate.

Art. 25. An organic law will determine the duration of the powers of each Assembly, the number of its members, their salary, and the conditions of eligibility and ineligibility.

It will also lay down the conditions under which elections will be held to fill vacant seats of Deputies and Senators for the period until the complete or partial renewal of the Assembly to which they belong.

Art. 26. No member of Parliament may be prosecuted, investigated, arrested, detained or tried because of the opinions expressed, or votes cast, by him in the exercise of his functions.

No member of Parliament may be prosecuted or arrested for crimes or offences during parliamentary sessions without the authorization of the Assembly to which he belongs, save in the event of his being caught *in flagrante delicto*.

When Parliament is not in session, no member of Parliament can be arrested without the authorization of the *Bureau* of the Assembly to which he belongs, except in cases of *flagrant délit*, authorized prosecution, or final conviction.

The detention or prosecution of a member of Parliament must be suspended if the Assembly of which he is a member demands it.

[*The Government accepted the text of this Article as proposed by the Consultative Committee.*]

Art. 27. All [extra-parliamentary] instructions on how to vote are null and void.

The voting rights of the members of Parliament are personal.

The organic law may, under exceptional circumstances, authorize the delegation of the vote. In this case, no-one may accept the delegation of more than one vote.

[*In the past, members of Parliament who wished to stay away, or were otherwise prevented from attending, had frequently delegated the exercise of their vote to other deputies or senators.*]

Art. 28. Parliament meets by right in two ordinary sessions a year.

The first session begins on the first Tuesday of October and ends on the third Friday of December.

The second session opens on the last Tuesday of April; its duration may not exceed three months.

Art. 29. Parliament meets in extraordinary session at the request of the Prime Minister, or of the majority of the membership of the National Assembly, on a specific agenda.

When the extraordinary session is held at the request of the members of the National Assembly, the decree of closure is issued as soon as Parliament has dealt with the agenda for which it was called, and at the latest 12 days from the date of its convocation.

The Prime Minister may only ask for a new session before the end of the month which follows the decree of closure.

[*The Government accepted the Consultative Committee's demand that extraordinary sessions convened at the Assembly's request should last for a maximum of* 12 *days, instead of eight as originally proposed. The clause preventing the Prime Minister from demanding another extraordinary session later than one month after the end of a previous similar session also reflected the views of the Consultative Committee.*]

Art. 30. Except when Parliament meets by right, extraordinary sessions are opened and closed by decree of the President of the Republic.

Art. 31. The members of the Government may attend both Assemblies. They must be heard at their request.

They may be assisted by commissioners of the Government (*commissaires du gouvernement*).

Art. 32. The Speaker of the National Assembly is elected for the duration of the legislature. The President of the Senate is elected after each partial election.

Art. 33. The meetings of the two Assemblies are public. A complete report of the debates is published in the *Journal Officiel*.

Each Assembly may meet in secret committee at the demand of the Prime Minister or of one-tenth of its members.

Section V.—Relations between Parliament and the Government.

Art. 34. Laws are voted by Parliament.

Laws determine the principles concerning:

Civil Rights and fundamental guarantees accorded to the citizens for the exercise of public liberties; the obligations imposed by national defence upon the person and property of citizens;

Nationality, personal status and capacity to handle one's affairs [e.g. minors, mentally deranged persons, etc.] matrimonial affairs, inheritances, and gifts;

The determination of crimes and offences, as well as the punishments applicable to them; criminal procedure; amnesty, the creation of new judicial systems; and the statute of magistrates;

The imposition, rates, and collection of taxes of all types; the system of issuing money.

Laws also lay down the rules concerning:

The electoral system for the parliamentary assemblies and the local assemblies;

The setting-up of categories of public industries;

The fundamental guarantees accorded to civil and military functionaries of the State;

The nationalization of enterprises and the transfer of property from the public to the private sector.

Laws lay down the fundamental principles of:

The general organization of national defence;

The free administration of local communities, their powers, and their resources;

Education;

The status of property and of labour, civil and commercial obligations,

Laws pertaining to labour, unions, and social security.

The financial laws regulate the financial resources and obligations of the State under the conditions and with the exceptions provided for by an organic law.

Appropriate laws determine the objectives of the economic and social activities of the State.

The provisions of this Article will be detailed and completed by an organic law.

[*The new list of the legislative competences of Parliament was based on the advice of the Consultative Committee, as revised by the Council of State. It retained,* inter alia, *tax and electoral legislation, but in other respects was less clear than the Committee's proposals—which had, for instance, expressly reserved to Parliament all legislation on the administration of social security and benefits and family allowances. Nevertheless, there will be a possibility of making the list more precise and of completing it by means of an organic law, as stated in the final paragraph of this Article.*]

Art. 35. A declaration of war is authorized by Parliament.

Art. 36. A state of siege is decreed by the Council of Ministers. Its extension beyond 12 days can only be authorized by Parliament.

Art. 37. All matters other than those which are the subject of legislation may be regulated by decree (*un caractère réglementaire*).

Legislation pertaining to these matters may be modified by decrees issued after the advice of the Council of State. Those laws which come into effect after the entry into force of the present Constitution may only be modified by decree if the Constitutional Council has stated that . . . they do not fall within the categories to be dealt with by legislation.

[*The intervention of the Council of State was a new provision added to the original draft.*]

Art. 38. In order to carry out its programme, the Government may ask Parliament to authorize it to issue ordinances during a limited period on such matters as are normally subject to laws.

Such ordinances are issued by the Council of Ministers after an opinion has been given by the Council of State. They come into force upon publication, but become null and void if a Bill for their ratification is not submitted to Parliament before the date fixed by the enabling Act.

After the expiration of the period mentioned in the first paragraph of this Article, these ordinances may only be modified by legislation if they concern matters falling within the legislative sphere.

[*The initial draft would have also allowed the Government to deal by decree with financial measures necessary to implement its programme; this was omitted from the final text.*]

Art. 39. Bills may be initiated by the Prime Minister and by the members of Parliament.

Bills are discussed by the Council of Ministers after the Council of State has given an opinion, and are then submitted to the *Bureau* of one of the two Assemblies. All financial Bills must be first submitted to the National Assembly.

Art. 40. Bills and amendments proposed by members of Parliament are not admissible when their adoption would result either in a reduction of public [financial] resources or the creation or aggravation of a public debt.

Art. 41. If it appears in the course of the legislative process that a Bill or an amendment is not within the sphere of legislation, or is contrary to a delegation of legislative power granted to the Government by virtue of Article 38, the Government can oppose its admissibility.

In case of a disagreement between the Government and the president of the Assembly concerned, the Constitutional Council, at the request of one or the other party, will give its decision within eight days.

Art. 42. The discussion of Bills by the first Assembly to which they have been referred is confined to the text presented by the Government.

An Assembly which has received a Bill voted by the other Assembly deliberates on the text which has been transmitted to it.

Art. 43. At the request of the Government or of the Assembly concerned, Bills must be sent for examination to committees specially designated for this purpose.

Those Bills for which such a request has not been made are sent to one of the permanent committees, the number of which is limited to six in each Assembly.

[*The Consultative Committee wished to restrict examination by special committees to those Bills which would not fall within the sole competence of one of the permanent committees, but the Government rejected this.*]

Art. 44. Members of Parliament and of the Government have the right of amendment.

After the opening of the debate, the Government can oppose the consideration of any amendment which has not previously been submitted to the committee.

If the Government requests it, the Assembly concerned must decide by a single vote on all or part of the text under discussion, considering only the amendments proposed or accepted by the Government.

Art. 45. Every Bill is examined successively in the two Assemblies of Parliament with a view to the adoption of an identical text.

When, as a result of a disagreement between the two Assemblies, a Bill has not been adopted after two readings by each Assembly, or, if the Government has declared the Bill to be one of urgency, after a single reading by each Assembly, the Prime Minister is entitled to demand the convening of a joint committee on which both Assemblies are equally represented, and which has the task of proposing a text on the matters still under discussion.

The text worked out by the joint committee may be submitted by the Government for the approval of the two Assemblies. No amendment is admissible except by agreement with the Government.

If the joint committee does not agree on a common version, or if this version is not adopted under the conditions set forth in the preceding paragraph, the Government, after a new reading by the National Assembly and the Senate, can request the National Assembly to give a final decision. In this case the National Assembly can either reconsider the text worked out by the joint committee, or the last text voted by it, modified as the case may be by one or several of the amendments adopted by the Senate.

[*As explained by M. Debré, the normal procedure under this system will be that of an indefinite* navette *as under the* 1875 *Constitution. The Assembly will have the final say only if the Government permits this. The Consultative Committee had proposed the admissibility of amendments to the text agreed by the joint committee of both Assemblies, provided they had been passed by a majority of the members of one Assembly, but the Government rejected this recommendation.*]

Art. 46. Laws on which the Constitution confers the character of organic laws are voted and amended under the following conditions:

The first Assembly to which the Bill has been submitted can deliberate and vote on it only after 15 days following its introduction.

The procedure of Article 45 is also applicable here. However, if there is no agreement between the two Assemblies, the passing of the Bill by the National Assembly in final reading requires an absolute majority of the Assembly's membership.

Organic laws relating to the Senate must be voted in the same manner by the two Assemblies.

Organic laws can be promulgated only after a declaration by the Constitutional Council that they conform to the Constitution.

Art. 47. Parliament votes Finance Bills under the conditions laid down by an organic law.

If the National Assembly has not given a decision on its first reading within 40 days following the introduction of a Bill, the Government refers it to the Senate, which must decide within 15 days. The further procedure is regulated by the conditions set forth in Article 45.

If Parliament has not given a decision within 70 days, the provisions of the Bill may be put into effect by ordinance.

If a Finance Bill laying down revenue and expenditure for a fiscal year has not been introduced early enough for it to be promulgated before the beginning of that fiscal year, the Government must ask Parliament as a matter of urgency to be given authority for collecting taxes and for making available the credits needed for the purposes voted.

The periods set forth in the present Article are suspended when Parliament is not in session.

The Court of Accounts assists Parliament and the Government in controlling the execution of financial legislation.

Art. 48. The agenda of the Assemblies provides, as a matter of priority and in the order, which the Government has fixed, for the discussion of the Bills introduced by the Government or accepted by it.

One session a week is reserved as a matter of priority for questions by members of Parliament and answers by the Government.

[*The Consultative Committee had tried to restrict the Government's right to fix the agenda in respect of at least one session a week, when the agenda would have been at the discretion of each Assembly. The Government, however, rejected any such restriction of its powers.*]

Art. 49. The Prime Minister, after deliberation by the Cabinet, stakes the responsibility of the Government before the National Assembly on its programme or on a declaration of general policy.

The National Assembly invokes the Government's responsibility by voting a motion of censure. Such a motion is only admissible if it is signed by at least one-tenth of the members of the National Assembly. Voting on it can take place only 48 hours after the motion has been tabled.

The only votes counted are those supporting the censure motion, whose adoption requires a majority of the Assembly's membership. If the censure motion is rejected, its signatories cannot propose a new one in the course of the same session, except in the case set forth in the following paragraph.

The Prime Minister, after deliberation by the Cabinet, may make the existence of the Government dependent on the vote of a text by the National Assembly. In such a case, the text is considered as adopted unless a motion of censure, tabled during the next 24 hours, is passed in the conditions set forth in the preceding paragraph.

The Prime Minister has the right to ask the Senate for approval of a declaration of general policy.

Art. 50. When the National Assembly adopts a motion of censure, or when it disapproves the programme or a declaration of general policy of the Government, the Prime Minister must tender the Government's resignation to the President of the Republic.

Art. 51. The closing of ordinary or extraordinary sessions is by right delayed in order to permit, should the case arise, the application of the provisions of Article 49.

Section VI.—Treaties and International Agreements.

Art. 52. The President of the Republic negotiates and ratifies treaties.

He is informed of all negotiations leading to the conclusion of an international agreement not subject to ratification.

Art. 53. Peace treaties, commercial treaties, treaties or agreements relating to international organizations, and those which affect the finances of the State, modify dispositions of a legislative nature, relate to the personal status of individuals, or involve the cession, exchange or addition of territory, can be ratified or approved only by a law.

They do not come into effect until they have been so ratified or approved.

No cession, exchange, or addition of territory is valid without the consent of the populations concerned.

[*The list of treaties and agreements requiring ratification or approval by a law was extended according to the Consultative Committee's recommendations, notably by the addition of commercial treaties.*]

Art. 54. If the Constitutional Council, after the matter has been referred to it by the President of the Republic, by the Prime Minister, or by the President of one or other Assembly, declares that an international commitment contains a provision contrary to the Constitution, then authority to ratify or approve it can only be given after the revision of the Constitution.

[*Both the Government's initial draft and that of the Consultative Committee had envisaged the same procedure for "organic laws," but this was eventually dropped.*]

Art. 55. Treaties or agreements properly ratified or approved have, upon their publication, an authority superior to ordinary legislation, provided that in each individual case the treaty or agreement is also applied by the other party.

Section VII.—The Constitutional Council.

Art. 56. The Constitutional Council consists of nine members, whose term of office is for nine years and is not renewable. One-third of the membership of the Constitutional Council will be renewed every three years. Three of its members are nominated by the President of the Republic, three by the President of the National Assembly, and three by the President of the Senate.

In addition to the nine members provided for above, former Presidents of the Republic are *ex-officio* members of the Constitutional Council for life.

Its President is named by the President of the Republic. He has the deciding vote in case of a tie.

Art. 57. Membership of the Constitutional Council is incompatible with Ministerial office or membership of Parliament. Other incompatabilities will be regulated by an organic law.

Art. 58. The Constitutional Council supervises the election of the President of the Republic.

It examines complaints and announces the results of the vote.

Art. 59. The Constitutional Council decides on the regularity of the election of deputies and senators if this is contested.

Art. 60. The Constitutional Council supervises the procedure of a referendum and announces the results.

Art. 61. Organic laws before their promulgation, and procedural regulations of the parliamentary Assemblies, before they come into application, must be submitted to the Constitutional Council, which decides on their conformity with the Constitution.

For the same purpose Bills may be referred to the Constitutional Council, before their promulgation, by the President of the Republic, the Prime Minister, or the President of one or other of the Assemblies.

In all these cases the Constitutional Council must give its ruling within one month. However, at the Government's request because of urgency, this period is reduced to eight days.

Reference to the Constitutional Council suspends the time-limit for promulgation.

Art. 62. A provision which has been declared unconstitutional may not be promulgated nor put in force.

There is no appeal against the decisions of the Constitutional Council, which are binding on all State organs and on all administrative and judicial authorities.

Art. 63. An organic law determines the organization and functioning of the Constitutional Council, its procedure, and notably the period within which a dispute may be referred to it.

Section VIII.—Judicial Authority.

Art. 64. The President of the Republic is the guarantor of judicial independence and authority.

He is assisted by the Superior Council of the Judiciary (*Conseil supérieur de la magistrature*).

An organic law lays down the statute of judges.

Judges, on their appointment, hold office for life.

[*Both Government's initial draft and the Consultative Committee had merely proposed that the independence of judges should be guaranteed by the law.*]

Art. 65. The Higher Council of the Judiciary is presided over by the President of the Republic. Its Vice-President is the Minister of Justice, who may deputize for the President of the Republic.

The Higher Council includes, in addition, nine members designated by the President of the Republic in conformity with conditions to be defined by an organic law.

The Higher Council of the Judiciary presents nominations for judges of the *Court de Cassation* [the Supreme Court] and for the senior presiding judge of the Courts of Appeal. It gives its opinion, under the conditions laid down by an organic law, on nominations of other judges proposed by the Minister of Justice. It is consulted on questions of pardon under conditions to be defined by an organic law.

The Higher Council of the Judiciary decides in disciplinary matters affecting established judges. It is then presided over by the senior presiding judge of the Court of Cassation.

[*This version contained numerous changes from the original draft, the functions of the Higher Council being enlarged and its functioning classified.*]

Art. 66. No one may be arbitrarily detained.

The judicial authority, guardian of individual liberty, assures respect for this principle under the conditions provided for by law

Section IX.—The High Court of Justice.

Art. 67. There will be a High Court of Justice.

It consists of members of Parliament elected in equal numbers by the National Assembly and by the Senate after each complete or partial renewal of those Assemblies. It elects its president from among its members.

An organic law will fix the composition of the High Court, its administrative rules, and its procedure.

Art. 68. The President of the Republic is not accountable for acts undertaken in the exercise of his duties, except in the case of high treason. He can be indicted only by the two Assemblies passing identical motions in an open vote and by an absolute majority of their respective memberships; he is judged by the High Court of Justice.

Members of the Government are responsible under criminal law for acts undertaken in the exercise of their duties which are considered as crimes or offences at the time they were committed. The procedure defined above is applicable to them, as well as to their accomplices in the case of a plot against the security of the State. In all cases covered by this paragraph the High Court is bound by the definition of the crimes and offences, as well as by the determination of the penalties, laid down by the penal laws in force at the time the acts were committed.

Section X.—The Economic and Social Council.

Art. 69. The Economic and Social Council, at the request of the Government, gives its advice on the Bills, ordinances or decrees which have been referred to it.

A member of the Economic and Social Council may be designated by the Council to explain before the parliamentary Assemblies the Council's opinion on Bills or proposals submitted to it.

Art. 70. The Economic and Social Council can likewise be consulted by the Government on any problem of an economic or social character which is of concern to the Republic or to the Community. Any economic or social Plan or Bill must be referred to it for its advice.

Art. 71. The composition of the Economic and Social Council, and its operating rules, will be determined by an organic law.

Section XI.—Territorial Units.

Art. 72. The territorial units (*collectivités*) of the Republic are the communes, the departments, and the overseas territories. Any other territorial unit can only be created by law.

These units administer themselves freely through elected councils and under conditions provided for by law.

In the departments and the territories, the delegate of the Government is responsible for upholding the national interests, administrative control, and respect for the law.

Art. 73. The legislative system and the administrative organization of the overseas departments may be adapted to meet the requirements of their particular situation.

Art. 74. The overseas territories of the Republic have a special organization taking account of their particular interests within the overall interests of the Republic. This organization is defined and modified by law after consultation with the territorial assembly concerned.

Art. 75. Citizens of the Republic who do not have the ordinary civil status—the only status recognised in Article 34—retain their personal status as long as they have not renounced it.

Art. 76. The overseas territories may retain their status within the Republic.

If they express a wish to that effect by a decision of their territorial assembly within the period fixed in the first paragraph of Article 91 [i.e. within four months after the promulgation of the Constitution], they may become either overseas departments of the Republic or member-States of the Community.

Section XII.—The Community.

Art. 77. In the Community established by the present Constitution, the member-States enjoy autonomy; they administer themselves and manage their own affairs democratically and freely.

There is only one citizenship in the Community.

All citizens are equal before the law, whatever their origin, their race, or religion. They have the same duties.

Art. 78. The competence of the Community comprises foreign policy, defence, currency, and common economic and financial policy, as well as policy concerning strategic raw materials.

In addition, it comprises (unless excluded by special agreement) control of justice, higher education, the general organization of external and common transport, and telecommunications.

Special agreements may establish other common spheres of competence or regulate the transfer of competences from the Community to one of its members.

Art. 79. The member-States benefit from the provisions of Article 77 as soon as they have exercised the choice provided for in Article 76.

Until the measures required for the application of this section come into effect, matters of common competence will be regulated by the Republic.

Art. 80. The President of the Republic presides over and represents the Community.

The organs of the Community are an Executive Council, a Senate, and a Court of Arbitration

Art. 81. The member-States of the Community participate in the election of the President under the conditions set forth in Article 6.

The President of the Republic, in his capacity of President of the Community, is represented in each State of the Community.

Art. 82. The President of the Community presides over the Executive Council of the Community. The Council consists of the Prime Minister of the Republic, the Heads of Government of each of the member-States, and the Ministers responsible for the common affairs of the Community.

The Executive Council organizes the co-operation of members of the Community at governmental and administrative levels.

The organization and functioning of the Executive Council will be defined by an organic law.

Art. 83. The Senate of the Community consists of delegates whom the Parliament of the Republic and the Legislative Assemblies of the other members of the Community elect from their own membership. The number of delegates of each State depends on its population and the responsibilities it assumes in the Community.

The Senate holds two sessions a year, which are opened and closed by the President of the Community and may not exceed one month each.

At the request of the President of the Community, the Senate deliberates on common economic and financial policy before laws in these spheres are voted by the Parliament of the Republic, or, as the case may be, by the Legislative Assemblies of the other members of the Community.

The Senate studies those international acts, treaties or agreements which are specified in Articles 35 and 53 and which bind the Community.

The Senate takes binding decisions in those spheres which have been delegated to it by the Legislative Assemblies of the members of the Community. These measures are promulgated in the same form as the law of the territory of each of the States concerned.

An organic law will regulate details of the Senate's composition and the rules for its functioning.

Art. 84. A Community Court of Arbitration adjudicates on disputes between members of the Community.

Its composition and competence will be regulated by an organic law.

Art. 85. Contrary to the procedure set forth in Article 89, the provisions of this Section which concern the functioning of common institutions can be amended by laws voted in identical forms by the Parliament of the Republic and by the Senate of the Community.

Art. 86. A change in the status of a member-State may be requested either by the Republic or by a resolution of the Legislative Assembly of the State concerned which has been confirmed in a local referendum, the organization and supervision of which is carried out by the organs of the Community. The terms of such a change in status are regulated by an agreement approved by the Parliament of the Republic and the Legislative Assembly concerned.

Under the same conditions a member-State of the Community may become independent. It then ceases to belong to the Community.

[*This Article was directly inspired by General de Gaulle's speeches at Brazzaville and Dakar during a pre-referendum tour of the African colonial territories. It envisages specifically the possibility of a member-State wishing to become independent. The final version of the whole Section was largely based on the proposals of the Consultative Committee.*]

Art. 87. The special agreements made for the application of this section must be approved by the Parliament of the Republic and the Legislative Assembly concerned.

Section XIII.—Agreements of Association.

Art. 88. The Republic or the Community may conclude agreements with States desiring to associate themselves with the Republic or the Community.

Section XIV.—Revision of the Constitution.

Art. 89. The initiative for amending the Constitution belongs concurrently to the President of the Republic, on the proposal of the Prime Minister, and to the members of Parliament

The Amending Bill must be voted by the two Assemblies in identical terms. The amendment becomes definitive after approval by referendum.

No referendum takes place, however, if the President of the Republic decides to submit the Amending Bill to Parliament meeting in congress (i.e. joint session); in this case, the Amending Bill requires approval by a majority of three-fifths of the votes cast The *Bureau* of the congress is that of the National Assembly.

No amending procedure may be commenced or continued if it is prejudicial to the integrity of the national territory.

The Republican form of government is not subject to revision.

Section XV.—Transitional Provisions.

Art. 90. The ordinary session of [the present] Parliament is suspended. The mandate of the members of the present National Assembly will expire on the day on which the Assembly elected under the present Constitution meets for the first time.

Until this meeting, the Government alone has authority to convene Parliament.

The mandate of the members of the Assembly of the French Union will expire at the same time as that of the members of the present National Assembly.

Art. 91. The institutions of the Republic provided for in the present Constitution shall be set up within four months after its promulgation.

This period is extended to six months for the institutions of the Community.

The powers of the present President of the Republic will not expire until the results of the election provided for in Articles 6 and 7 of the present Constitution have been officially announced.

The member-States of the Community will participate in this first election under conditions depending on their status at the date of the promulgation of this Constitution.

The established authorities in these States will continue to exercise their functions according to the laws and regulations applicable when this Constitution comes into force, until the authorities provided for by their new regime have been established.

Until its definitive constitution, the Senate shall consist of the present members of the Council of the Republic. The organic laws regulating the definitive constitution of the Senate must be passed before July 31, 1959.

The powers conferred on the Constitutional Council by Articles 58 and 59 shall, pending the establishment of the Council, be exercised by a committee consisting of the Vice-President of the Council of State as chairman, the senior presiding judge of the Court of Cassation, and the senior presiding judge of the Court of Accounts.

The peoples of the member-States of the Community shall continue to be represented in Parliament until the necessary measures for the application of Section XII come into effect.

Art. 92. The legislative measures required for the establishment of the institutions and, until they are established, for the functioning of the public organs, will be taken by the Council of Ministers, on the advice of the Council of State, through ordinances having the force of law.

During the [four-month] period fixed in the first paragraph of Article 91. the Government is authorized to regulate, by ordinances —having the force of law and passed in the same way [i.e. on the advice of the Council of State]—the electoral system for the Assemblies provided for in the Constitution.

During the same period, and under the same conditions, the Government may also take measures in all spheres which it may deem necessary to the life of the nation, the protection of the citizens, and the safeguarding of liberties.

[*The Government did not accept the Consultative Committee's recommendation that there should be a referendum on the new electoral system.*]

The Consultative Committee completed its work on the Constitution on Aug. 14, after having rewritten some 20 of the 92 Articles in whole or in part; its report, detailing the proposed amendments, was transmitted to General de Gaulle by M. Paul Reynaud on the same date, together with a covering letter.

General de Gaulle had previously appeared before the Committee on Aug. 8, when he replied to a number of objections which had been raised on specific constitutional questions—notably the greatly increased powers to be given to the President of the Republic, and the proposals for a federal Community linking France and the *territoires d'outre-mer*. As regards the controversial Article 14 (the President's special powers), General de Gaulle insisted that the Constitution must give the President wide discretionary powers to preserve the Republic in the event of a national emergency. He maintained that "the events of the past 30 years and the difficulties facing all nations today" made it imperative to invest the Head of State with powers to ensure the continuity of the Republic in an emergency; nor could be "imagine a modern Constitution omitting this rare but essential responsibility." In this connexion General de Gaulle recalled that President Lebrun had said to him in 1940 that he (M. Lebrun) was unable constitutionally to leave the metropolitan territory at the time; had the special Presidential powers existed then (the General argued), it might have been possible to organize the Resistance more rapidly and ensure the legal continuity of the State.

With regard to the oversea territories, General de Gaulle believed that the Constitutional provisions were "adapted to the realities of the modern world" by providing for creation of a "new and immense *ensemble*" linking France and the territories concerned.

Thirty of the 39 members of the Consultative Committee approved the draft constitutional text, as amended, before it was sent to General de Gaulle by M. Reynaud. There were no opposing votes, but seven members of the Committee abstained, M. Reynaud (as chairman) took no part in the vote, and M. Senghor was absent. The seven abstaining members comprised four of the five Socialists (the exception being M. Alduy), two Radicals (M. Degoutte and Senator Gilbert Jules) and Senator Lamine-Gueye (P.R.A.).

The Consultative Committee's amendments and recommendations were given detailed consideration by the Government in the three weeks between Aug. 14 and the publication of the final text on Sept. 4; as stated above (in the italicized paragraphs) some of these amendments were accepted in whole or part, and others rejected.—(Le Monde, Paris - Le Figaro, Paris)

(Prev. rep. 16279 A.)

A. SOVIET UNION. — Dismissal of General Serov.

The Tass Agency announced on Dec. 8 that General Ivan Serov, head of the Soviet internal security forces, had been "released from his duties as chairman of the Committee of State Security" and transferred to "other work," of which no details were given.

General Serov (54) came into prominence in 1954 after the execution of Lavrenti Beria, his former chief. Little is known of his early career, but it has been alleged that he bore responsibility for the mass deportations from the Baltic States when those countries were incorporated in the U.S.S.R. in 1940, at which time he was deputy Commissar of State Security. He is also alleged to have been involved in the deportations of Crimean Tartars and other minority groups and in the organization of forced labour camps. He became head of the State Security Committee in 1954, in which capacity he visited Britain in 1956 to make security arrangements for the visit of Marshal Bulganin and Mr. Khrushchev in conjunction with Scotland Yard; he was bitterly attacked in the British Press at the time and, following protests in the House of Commons, his name was not on the list of the visiting Soviet party.

The K.G.B. (*Komitet Gosudarstvennoye Bezopasnosty*, or Committee of State Security), of which General Serov was formerly the head, is one of the two organs controlling the Soviet police; the other is the M.V.D. (*Ministerstvo Vnutrennich Del*, or Ministry of Internal Affairs), under M. Duderov. The K.G.B. is responsible for intelligence and counter-espionage activities (in effect, the secret police) and is responsible only to the Council of Ministers; the M.V.D. has responsibility for ordinary police functions, including passports, visas and identity cards.—(Times - Soviet Embassy Press Dept., London)

B. EASTERN GERMANY. — Abolition of Upper House of Parliament.

The Upper House of the East German Parliament (the *Länderkammer*) was abolished on Dec. 8 under legislation passed by the *Volkskammer* two days earlier. It was officially explained that the move was designed "to simplify the State apparatus in the interests of democratic centralization" and to give greater responsibility to local authorities. The *Länderkammer* consisted of 50 members representing the 14 *Bezirke* (units of regional administration, replacing the former *Länder*), together with 13 representatives of East Berlin.

(Neues Deutschland, East Berlin) **(Prev. rep. 16519 A)**

C. IRAQ. — Discovery of Anti-Government Plot.

A statement by Brigadier Kassem, broadcast on Dec. 8 by Baghdad Radio, announced the discovery of an anti-Government plot which was to have been carried out on Dec. 9 or 10 by "corrupt elements with the help of foreigners from outside Iraq." It was stated that money and arms had been seized and that the conspirators would be put on trial for treason. No mention was made of the persons implicated.—(Times)

D. ARGENTINA. — Diplomatic Relations resumed with Dominican Republic.

Diplomatic relations between Argentina and the Dominican Republic were resumed on Oct. 29; they had been broken off by the Argentine Provisional Government in April last because of the activities of ex-President Perón in Ciudad Trujillo.

(Bank of London and South America Fortnightly Review)

(Prev. rep. 16148 B.)

A. UNITED KINGDOM. — Coal Industry. - Large Increase in Stocks. - Closing of Uneconomic Pits. - Increase in Borrowing Powers of National Coal Board. - Production Statistics. - Wage Increases.

The Parliamentary Secretary to the Ministry of Power (Sir Ian Horobin) announced in the House of Commons on Dec. 3 that the National Coal Board proposed to close 36 uneconomic pits, mostly in Scotland, in order to reduce coal output to match reduced demand. About 12,000-13,000 miners would become redundant, of whom about two-thirds would probably be found other jobs in coalmining; the remaining 4,000 would have to leave the industry and would receive special compensation. Opencast production would also be cut by about 3,000,000 tons.

Sir Ian's announcement was made when moving approval of the Coal Industry (Borrowing Powers) Order, which increased the total amount which the National Coal Board might borrow from the Treasury from £75,000,000 to £130,000,000 [see below.]

Mr. Robens (Lab.), while expressing the Opposition's approval of the proposed increase in the Board's borrowing powers, attributed the industry's troubles to (1) unfair competition from oil, the consumption of which, he said, was far higher than originally planned; (2) the "stagnation of industrial production" which, he alleged, resulted from the Government's policies. "If the mining industry were to be panicked into reducing its capacity," declared, "the country would be in a bad way if there was interruption in Middle East oil supplies." He therefore urged the Government to review its fuel and power policy; to determine the position of the coalmining industry in Britain's economy; and meanwhile to call a halt in the conversion of power stations to oil fuel.

Several other Opposition speakers demanded the re-conversion of oil-burning power stations to coal, whilst **Mr. Nabarro** (C.) expressed the view that the cuts should come mainly from opencast production, which should be reduced from 14,000,000 tons to 6,000,000 tons. **Colonel Lancaster** (C.) called for an export drive to create a natural market for surplus coal.

Mr. Maudling (Paymaster-General), in reply, said that the prospects of resuming large exports to Europe were not great, but the Coal Board had recently fixed up "encouraging" contracts for steam coal. Discussions had already taken place to reduce the amount of oil delivered against power station contracts; the oil companies had been co-operative, but to go further in the direction of cuts would be unfair.

The chairman of the National Coal Board (Sir James Bowman) explained the Board's reasons for closing down the pits in a statement to the executive of the National Mineworkers' Union on the same day.

Sir James Bowman said that demand for coal in 1959 was unlikely to exceed 200,000,000 tons, whereas at the present rate production would exceed 209,000,000 tons. With no sign of an early revival of industrial activity stocks could not be allowed to grow much more, and steps must be taken to reduce output. By closing certain "highly uneconomic" collieries and concentrating work in others, deep-mined output could be cut by nearly 3,000,000 tons in 1959, whilst the quantity from opencast working would also be reduced by 3,000,000 tons. The remaining surplus output—probably about 4,000,000 tons—would be put into stock.

Sir James explained that the 36 pits to be closed were distributed over seven coalfields and had been carefully chosen so that in nearly every instance displaced workers could be transferred to pits in their own districts. By limiting the recruitment of young miners and persuading miners over 65 to retire, it was hoped to find work for about two-thirds of the men from the closed pits. As a proportion of these men would themselves be over 65, the number for whom fresh work would have to be found would probably be about 11,500, of whom some 4,000 would have to leave the pits altogether. There would, however, be full consultation with the men's unions at each colliery, and compensation would be paid under the industry's redundancy agreement to those left without work—i.e. up to 26 weeks, at the rate of £3 8s. 4d. per week for surface workers and £4 1s. 8d. for adult underground miners, in addition to State unemployment benefit.

Twenty-two of the 36 pits to be shut down would close in the first quarter of 1959. Of the total, 20 (employing about 5,700 men) would be in the Scottish coalfield; six in South Wales; five in Northumberland and Cumberland; two in Durham; and one each in Lancashire, the Forest of Dean, and the West Midlands. The largest colliery to be closed would be the Maypole Colliery, near Wigan, employing 1,319 men. Nearly all the 36 pits would have been exhausted within five years, whilst the remainder, although still possessing some reserves, were so uneconomic that nothing could be done to make them pay.

After pointing out that the 36 collieries to be closed had lost about £4,000,000 in the past 12 months alone, Sir James explained why opencast production had not been cut further as an alternative to pit closing. "Opencast production," he said, "is highly profitable and yields a good proportion of large coal. Any larger reduction in opencast output would be prohibitively expensive. . . . Contracts have been let and nearly all the sites are working. The Board would have to meet heavy claims under the contracts and face the loss of over £10,000,000 worth of capital assets."

Sir James stressed in conclusion that, despite the saving which would accrue from the closing of uneconomic collieries, "the cost of additional stocking, the loss of opencast proceeds, the cost of the latest wages award [see below], and the continuing growth of the Board's other financial commitments . . ., make it imperative that they institute still further measures to improve productivity and reduce costs. . . . The necessity of these output restrictions, which arise from a temporary recession in British industry, does not mean that coal will not continue to be the main source of heat and energy for the nation. The importance of the Board's modernization programme remains undiminished."

The **N.U.M. Executive**, after expressing "considerable dismay" at the Board's proposals, suggested that the desired reduction in output should be achieved entirely by reducing opencast production, which, it was contended, had been introduced as an emergency measure and should be discontinued as soon as possible. After considering other proposals, including (1) the adoption of a policy of non-co-operation with the N.C.B. over the pit closures (supported by the Scottish and South Wales representatives), and (2) the sending of a deputation to the Prime Minister to urge that more opencast working should be suspended and oil imports reduced, the executive arranged to meet again on Dec. 12 to draft a considered reply to the Board.

The names of the pits to be closed were announced on Dec. 3 as follows (numbers employed at each pit shown in parentheses);

Scottish Division. *West Fife:* Dora (270); Jenny Gray (431); Benarty (218) *Lothian:* Oxenford 3 (230); Fleets (394). *Central West.* Branchal 307; Hamilton Palace (333); Garsthore 312 (355); Bothwell Castle (247). *Central East:* Loganlea (296); Southfield (380); Blairmuckhall (300); Harwood (201); *West Ayrshire:* Enterkine (219). *Alloa:* South Bantaskine (97); Devon (667). *East Fife:* Cameron (184); Wellsgreen (178). *Ayrshire:* Douglas Castle (348); Hindsward (45).

Northern Division. *Northumberland:* Venters Hall (168); Hartley (387); Blackhill (202). *Cumberland:* Clifton (520); Gillhead (133). *Durham Division:* East Hedley Hope (241), Ouston East (322).

North Western Division. *Wigan:* Maypole (1,319).

West Midlands Division. *Staffordshire:* Cannock Chase (719).

South Western Division. *Tondu:* Aberbaiden (n.a.), Pentre (761). *Rhondda:* Tydraw (360). *Neath Anthracite Area:* Cwmllynfell (318); Mount (287); Steer (401). *Forest of Dean:* Eastern United (458).

Mr. Maudling announced on Dec. 10 that the following 18 opencast sites, situated in ten counties, would shortly be derequisitioned as a result of the Government's decision to reduce the opencast coal production programme:

Newbigging (Midlothian); Drove Road (Northumberland); Broughton Moor extension (Cumberland); Castle Dene and Brandon extension (Durham); Tan Pit Slip, Wigan (Lancashire); Greasley Castle (Nottinghamshire); Pilsley Green, Outseats, and Dobbin Clough (Derbyshire); Windywood, High Hill, and Mitre (Staffordshire); Lawley Coppice (Shropshire); Llywn Pica, Tahirion, New Bryncethin, and Raglan Penylan (Glamorgan).

Production Statistics.

The following table shows the average weekly rate of coal production and consumption, and of manpower output, and absenteeism in the third quarter of 1958:

	Saleable Mined Coal Produced Tons	Plus Opencast Tons	Total Production Tons	Inland Consumption Tons	Exports and Bunkers† Tons
July ..	3,387,300	297,025	3,684,325	3,319,500	109,500
August* ..	2,880,780	270,280	3,151,060	2,864,800	88,000
September	3,830,575	313,275	4,143,850	3,250,750	105,250
3rd Qtr..	3,366,218	293,527	3,659,745	3,145,017	100,917

	Wage-earners on colliery books	at coal-face	No. of shifts worked per wage-earner	Output per manshift at coal-face Tons	Output per manshift overall Tons	Percentage of absenteeism
July ..	695,125	273,375	3.86	3.581	1.259	14.20
August* ..	693,180	272,740	3.50	3.377	1.174	14.10
September	692,325	272,075	4.38	3.480	1.262	14.16
3rd Qtr...	693,543	272,730	3.91	3.479	1.232	14.15

* Average of five weeks.

† Including fishing vessels but excluding coastwise bunkers.

Other recent developments in connexion with the coalmining industry are summarized below:

Miners' Wages. In response to a new wage claim for colliery day-wage workers' (see 16384 A) the National Coal Board on Sept. 17 offered a rise of 7s. weekly on condition that there should be (1) a 12 months' standstill in the rates of piece-rate workers (numbering about 250,000); (2) a return to Saturday working at selected pits producing a high percentage of large coal. In reply, the executive of the National Union of Mineworkers asked the National Coal Board to raise the increase to 8s. weekly and reduce the standstill period to six months, and a compromise was reached for a 7s. 6d. weekly increase and a nine-months' standstill. A special delegate conference of the Union decided on Oct. 11 by a 2-1 majority to recommend acceptance of the offer (which would have brought the minimum for underground workers to £9 17s. 6d. weekly and that for surface workers to £8 17s. 6d.), but a coalfield ballot resulted in its rejection on Nov. 3 by 418,000 votes to 322,000, mainly on account of the conditions attached to the pay increase.

Mr. Ernest Jones (president of the N.U.M.) announced on Nov. 6 that his executive had decided to reopen negotiations with the N.C.B. with a view to the withdrawal of the conditions; if the Board would not agree to this, the union would propose that the conditions (but not the increase itself) should be referred to the Coal Industry National Arbitration Tribunal. Talks between the N.C.B. and the union executive on Nov. 13 broke down, however, after the Board had refused to withdraw or modify the conditions and had insisted that the "whole matter" (the pay increase and the conditions) must be submitted to the Tribunal, and not merely the conditions alone.

Eventually, however, the Tribunal was asked to decide whether or not the proposed increases should be made dependent on the miners' acceptance of the Board's conditions. On Dec. 3 it ruled in favour of the miners' demand that the increases should be made unconditionally—i.e. "without strings attached." In its award the Tribunal explained that it considered that restraint in seeking revision of piece-rates would "best come voluntarily," and that the co-operation between the union and the Board, which was essential to enable the industry to absorb the cost of the award, "would not be promoted if the conditions were imposed."

The increases (backdated to Sept. 22) were expected to cost about £10,000,000 a year.

Proposed Penalty for "Pit Contraband." Mr. Jones announced on Oct. 9 that his executive had endorsed a proposal by a joint safety committee for the coalmining industry that anyone taking "contraband" (e.g. cigarettes, pipes, matches, lighters) into "safety lamp" pits, or parts of pits subject to "safety lamp working," should be liable to summary dismissal and exclusion from the coalmining industry for life. [The proposal still had to be approved by the N.C.B.] Mr. Jones added that a "large majority" of pits came within the "safety lamp" classification, and all would do so by 1960.

The Parliamentary Secretary to the Ministry of Power (Sir Ian Horobin) had announced on Nov. 17 that the Government would shortly introduce an Order to increase beyond £75,000,000 the annual limit of advances which the Minister might make to the N.C.B. for working capital. Sir Ian explained that stocks of coal at the collieries and at opencast sites on Nov. 1 amounted to 17,700,000 tons, whilst distributed and undistributed stocks on the same date amounted together to 36,800,000 tons. He gave the accumulated loss between Vesting Day (Jan. 1, 1947) and June 30, 1958, as £25,500,000. (Ministry of Power - Times)

A. WHALING. — Agreement on Limitation of Whaler Fleets in Antarctic Waters. - Five-Nation Conference.

An International Whaling Conference, called on the initiative of the British Ministry of Agriculture, Fisheries, and Food and attended by delegations from the five major whaling countries —Britain, Japan, the Netherlands, Norway, and the Soviet Union—took place in London from Nov. 19-27 under the chairmanship of Mr. J. D. Godber, Parliamentary Secretary of the Ministry of Agriculture, Fisheries, and Food.

The conference was called to remedy the situation arising out of the fact that whilst the International Whaling Commission [set up under the International Whaling Convention of 1946, see 7711 B] was empowered to fix the total number of whales allowed to be caught in any season, it had no control over the number or size of the whaling expeditions which countries adhering to the Convention might send out. In consequence, expeditions had tended to grow larger and more expensive every year, since each country had sought to obtain as large a percentage as possible of the total permissible catch fixed by the International Whaling Commission. The resulting competition had proved so wasteful that Norway was reported to have threatened to withdraw from the Convention unless agreement could be reached to restrict both the number of expeditions and of whale catchers attached to each; moreover, it was understood that Britain had contemplated abandoning Antarctic whaling altogether.

At the close of the conference on Nov. 27 it was announced that agreement had been reached on the two major points at issue: (1) the overall limitation of the number of expeditions to be operated by each of the five nations in the Antarctic; and (2) the allocation between the five countries of the annual total catch permitted under the Convention. As regards (1) the Soviet Union would be permitted to add up to three new factory ships to the two vessels already in operation, whilst Britain, Japan, the Netherlands and Norway had agreed not to increase their fleets. With regard to (2) the Soviet Union had accepted an award of 20 per cent of the total permitted catch, leaving the remaining 80 per cent to be shared amongst the other four countries. Discussions on the percentage to be allotted to each country would take place later with a view to concluding an agreement by June 1, 1959, in time for the next annual conference of the International Whaling Commission.—(Lloyd's List and Shipping Gazette - Times - Manchester Guardian - Norwegian Embassy Press Department, London)

Note: In the 1958-59 whaling season there will be nine Norwegian, eight Japanese, three British, two Russian and one Dutch expeditions in the Antarctic. (Daily Telegraph)

B. UNITED KINGDOM. — Nationalized Gas Industry. - Report and Accounts for 1957-58.

The ninth annual report and accounts of the Gas Council and the 12 Area Boards, covering the year ended March 31, 1958, were published on Oct. 14. They showed that the gas industry as a whole earned a net surplus of £2,820,610 (compared with £3,803,856 in 1956-57), bringing the cumulative surplus since Vesting Day to £18,121,338.

The net surplus was arrived at after charging £24,213,066 for depreciation etc., and £20,472,329 for interest. Ten of the 12 Area Boards earned surpluses (ranging from £14,418 for the North Eastern Board to £928,118 for the Northern Board), but the Southern and South Western Boards incurred deficits of £205,155 and £209,431 respectively.

Detailed information given in the report is summarized below:

Revenue. Gross revenue totalled £338,600,000, compared with £370,600,000 in 1956-57. Revenue from gas sales averaged about 20s. 2d. a therm, compared with about 19s. 1d. in 1956-57.

Costs and Prices. During the year the price of coal—accounting for two-thirds of the industry's costs—rose by eight per cent; because of this and of increases in freight and other charges, gas prices had to be increased.

Number of Consumers. This rose to 12,929,394, including 12,180,417 domestic consumers, both figures being just over 50,000 more than at March 31, 1957.

Sales. Sales of gas totalled 2,651,000,000 therms, a 1.7 per cent increase over 1956-57. Gas sales for hotels, offices, shops, schools, hospitals, and other public buildings (15 per cent of total gas sales) rose by three per cent over 1956-57, and gas sales for industry (30 per cent of all sales) rose by over five per cent.

New Processes. "Outstanding progress" had been made during the year in the development of new processes and sources for gas supply. In view of the increasing scarcity of good gas coal, the Council's researches had been mainly directed towards making use of poorer quality coals or alternative materials. Projects in hand included (1) a full-scale plant for the hydrogenation of coal or oil at high pressure (Manchester); (2) a plant for making gas from light petroleum distillates (Bristol); (3) works for the high-pressure gasification of poor-quality coal at Westfield (Fife).

Oil Gasification. Work had begun on 11 new plants, and at March 31, 1958, there were 25 plants in operation and 14 more projected.

Natural Gas. During the year the Scottish Gas Board had been using regular supplies of natural gas from Dalkeith (see 15809 A) at Musselburgh (Midlothian).

Number and Capacity of Gasworks. The number of gasworks at March 31, 1958, was 536 (75 smaller gasworks having been closed during the year), or almost exactly half the number at Vesting Day. In the same time, however, the capacity of the remaining gasworks had been increased by almost 25 per cent, and was now 12,000,000 therms a day. With a view to reducing the number of gasworks still further, the Gas Council was studying the economics of a national gas grid.

Capital Expenditure. During 1957-58 this totalled £55,700,000, against £51,300,000 in 1956-57.

Sir Harold Smith, chairman of the Gas Council, stated on Oct. 14 that the first 2,000 tons of liquefied methane would arrive from the U.S.A. early in 1959, and would be used experimentally by the North Thames Gas Board. If the experiment was successful, the gas industry would need several 30,000-ton tankers, each able to carry the equivalent in gas of 2,000,000 tons of coal. The importation of liquefied natural gas might result in reducing the price of gas by several pence a therm. Sir Harold added that the Gas Council had already spent over £600,000 in searching for natural gas in Britain; depths of over 7,000 ft. had been drilled in Yorkshire, but results had been disappointing.

The Minister of Power on Oct. 9 reappointed Sir Harold Smith as chairman of the Gas Council when his current term of office expires on Dec. 31, 1958.—(Times - Daily Telegraph)

(Prev. rep. 15809 A.)

C. RELIGIOUS LIFE. — Church of England. - New Bishop of Southwark.

It was announced on Nov. 26 that the Queen had approved the appointment of the Rev. Arthur Mervyn Stockwood, Vicar of St. Mary the Great, Cambridge (the University church), as Bishop of Southwark in succession to Dr. Bertram Simpson (75), retiring. Mr. Stockwood (45) is a strong supporter of the Labour Party and was a Labour member of Cambridge City Council at the time of his nomination to the see of Southwark; he was previously a Labour member of Bristol City Council from 1946-55 while a vicar in that city.—(Times - Church Times)

(Prev. rep. 16355 B.)

A. NIGERIA. — Resumed London Constitutional Conference. - Nigerian Independence in 1960. - Decisions on Commissions' Reports. - Procedures for Elections and Constitutional Amendments.

More than 100 Nigerian delegates and their advisers attended the resumed Constitutional Conference held in London from Sept. 29 to Oct. 27 under the chairmanship of Mr. Lennox-Boyd, the U.K. Colonial Secretary (see 15747 A). The discussions were largely concerned with the reports of the three Commissions appointed at the earlier conference—viz., the Constituencies Delimitation Commission, the Minorities Commission, and the Fiscal Commission (see 16338 A).

In their opening speeches all the Nigerian delegations were agreed on claiming independence for Nigeria in 1960, and on Oct. 25 Mr. Lennox-Boyd announced that a sufficient measure of agreement on all the important issues had been reached to enable H.M. Government to fix Oct. 1, 1960, as the date on which Nigeria would become independent. The first stage in the reduction of British responsibilities would be achieved in April 1959, when the Northern Region would become fully self-governing—a status realized by the Eastern and Western Regions in 1957 (see 15747 A). British authority would then be restricted to the powers of the Governor-General in Lagos, who would ordain the last Federal general election under Colonial auspices in the autumn of 1959—complete fairness in electoral campaigning and voting being fully guaranteed by H.M. Government. The newly-elected House of Assembly would pass a formal resolution asking for Nigerian independence in 1960, which H.M. Government had agreed in advance to accept.

Report of Minorities Commission.

The most controversial issues discussed at the conference concerned the recommendations of the Willink (Minorities) Commission, concerning which the following decisions were eventually agreed :

Police Control. The Minorities Commission had strongly advocated "the retention of a single strong police force not subject to regional control" as the best means of allaying the fears of regional minorities (see 16381 A). This view was strongly opposed by Chief Awolowo (Premier of Western Nigeria and leader of the Action Group), who demanded regionalization of the police on the following grounds : (i) that it was wrong to invest a government with responsibility for maintaining law and order without giving it the police to enforce them ; (ii) that centralization of the police had no parallel in any part of the Commonwealth with a Federal Constitution, except in Malaya ; (iii) that it was illogical to entrust political leaders at the Centre with responsibility for the police if they could not be similarly trusted in the Regions ; (iv) that a centralized police force was a strong potential weapon in the hands of a dictator, whereas "regional forces would make the possibility of a totalitarian régime emerging in Nigeria . . . very remote."

The Conference eventually approved a compromise arrangement which would provide for a single Nigerian Police Force under an Inspector-General directly responsible to the Federal Government, while securing regional safeguards by the appointment of regional Police Commissioners who would carry out the "routine requirements" of their respective Regional Governments. The Police Commissioners would be responsible to the Inspector-General, and both he and they would be subject to the final authority of the Governor-General in the first instance, and of the Federal Prime Minister after attainment of independence. A Police Council, consisting of the Federal Prime Minister (or whichever Minister might be made responsible for law and order) and corresponding regional Ministers, would determine the administration of the Police Force as distinct from its local operation.

Minority Areas. The Commission's recommendation for the establishment of Minority Areas encountered considerable opposition, almost all the delegates representing minorities demanding the creation of new States as the safest means to preserve racial identity and promote rapid economic development. The Commission's proposal that two Minority Areas should be created from part of Benin Province and the whole of Calabar Province was opposed by the Ijaws, Efiks, and Ibibios ; the Ijaws in particular (who live in both the Eastern and Western Regions) contended that only obstruction and administrative difficulties would result from their proposed Area being developed by three governments—those of the Federation and the two Regions concerned. It was eventually agreed, however, that the two proposed Areas should be established with the following modifications : (*a*) the Benin Province Minority Area would exclude the Warri Division and the Akoko-Edo District, on the understanding that the position of the Warri Division would be the subject of further local discussion between the Government of the Western Region and all interests concerned ; (*b*) the boundary of the Calabar Province Minority Area would be subject to further inquiry by the Governor of the Eastern Region.

The Conference discussed at length the Commission's conclusion that a case for the immediate creation of new States had not been made out. Mr. Lennox-Boyd pointed out in this connexion that if the issue were put to the test at the next election, or at a series of plebiscites in 1959, the aim of independence in 1960 could not be fulfilled. He proposed that provision should be made in the Constitution for the creation of new States after the granting of independence by the following special procedure, to which the Conference agreed :

(i) A resolution for creating a new State would require a two-thirds majority in the Federal legislature.

(ii) Such a resolution would also have to be approved by a simple majority in two Regions, one of which would have to be the Region from which it was proposed to create the new State ; or, alternatively, by a simple majority of all the Regions.

(iii) The necessary legislation would require enactment by a simple majority of the Federal Legislature.

(iv) A referendum would be held in the Area to be transferred.

The Conference also agreed on a special procedure for both minor and major boundary changes between Regions, which would also apply to Lagos.

Ilorin-Kabba Boundary. The Western Region Government had continued to press its claim that the Ilorin-Kabba Province (where the population is largely Yoruba and ethnically similar to the people in the west) should accede to the Western Region, but the Northern Region refused to agree The Willink Commission had recommended that this issue should be decided by a plebiscite in the province, but as the Conference produced no general agreement on the question the Colonial Secretary stated that he was not entitled to require a plebiscite to be held before the granting of independence ; the agreed procedure for boundary revision could, of course, be applied after independence.

Human Rights. The remaining principal recommendation of the Willink Commission—the embodiment of specific fundamental human rights in the Constitution—was accepted by the Conference.

Other Regional Issues.

The following decisions were taken with regard to Lagos, the Northern Region, and the Southern Cameroons.

Lagos. It was announced during the Conference that the Federal Government proposed to transfer the following public services to the Lagos Town Council as soon as possible : certain health services, including the school medical service and the hospital for infectious diseases ; the power to establish maternity homes ; primary education ; the services of the Social Welfare Department ; and the Lagos fire brigade. The town-planning functions of the Lagos Executive Development Board would also be transferred to the Town Council in due course.

Northern Region. Constitutional provision would be made for the Northern Region to become self-governing on March 15, 1959 [see above] on the lines established for the Eastern and Western Regions in 1957. The Conference discussed a memorandum from the Northern Regional Government concerning provincial administration ; this proposed, as a first step towards full provincial organization, the establishment of provincial councils with elected members, together with committees to direct individual provincial services.

Southern Cameroons. The Conference approved the agreement between the Colonial Secretary and representatives of the Southern Cameroons that no immediate constitutional changes should be made in that territory. It would, however, be open to the Southern Cameroons Government, which would be formed after the elections in January 1959, to request the United Kingdom to bring the following changes into effect :

(i) The withdrawal of the Deputy Commissioner as a member of the Executive Council ;

(ii) The appointment of a Minister of Finance after the 1959 Budget ;

(iii) The appointment of between four and seven Ministers, on the advice of the Prime Minister of the Southern Cameroons as tendered to the Commissioner ;

(iv) The creation of a separate Public Service, to which existing officers would be able to transfer, and of an advisory Public Service Commission.

The Prime Minister of the Southern Cameroons (Dr. Endeley) expressed "deep satisfaction" with these recommendations, which would give the Southern Cameroons "the chance to catch up with the three Regions of Nigeria before . . . independence." He also warmly welcomed "the unequivocal assurance" from the Federal Government that Nigeria would welcome the Southern Cameroons as part of the new Federation, should this prove to be the wish of the territory ; this assurance was unanimously endorsed by the Conference.

Houses of Chiefs.

The following decisions were taken with regard to the composition of the Houses of Chiefs in the three Regions of Nigeria and the Southern Cameroons :

Northern Region. The Conference noted with approval the intention of the Northern Region Government to secure wider representation in the Northern House of Chiefs. It was agreed that the membership of this body should consist of all the first-class chiefs and 95 other chiefs ; an adviser on Moslem law would also be included, as at present, and also those members of the Northern Region Executive Council who were members of the Northern House of Assembly.

Western Region. The Conference agreed that the House of Chiefs should have "delaying powers" similar to those possessed in the U.K. by the House of Lords. Its membership should be increased to 124, and the power to recognize and grade chiefs for the purposes of the Constitution should be vested in the Governor-in-Council.

Eastern Region. It was noted that the Eastern Region Government had agreed with the Opposition on a formula for the classification of chiefs, which would enable a House of Chiefs to be established.

Southern Cameroons. The Conference agreed to recommend that the House of Chiefs should continue for the present to be an advisory board, with its members appointed at the discretion of the Commissioner. These arrangements would be reviewed towards the end of 1959 by the Colonial Secretary and the Southern Cameroons Government.

The Judiciary.

The Conference made the following recommendations :

(i) The Federal Supreme Court should be enlarged by including the Chief Justices of each of the Regions as *ex-officio* members.

(ii) Existing arrangements for the appointment of Regional Chief Justices and members of Judicial Service Commissions should remain unchanged in the Eastern and Western Regions, and be applied to the Northern Region on its attainment of regional self-government.

(iii) Justices of the Peace should be appointed by the Judicial Service Commissions " at the appropriate constitutional stage."

(iv) The appointment, dismissal, and discipline of judges in Nigerian native and customary courts " should be divorced as far as possible from political and executive control."

The Conference also agreed (*a*) on the cases in which there should be constitutional provision for a right of appeal from the High Court to the Federal Supreme Court, on the basis of the minimum rights of appeal which might be expanded by individual legislatures ; (*b*) on providing a constitutional right of appeal from inferior courts to the High Court.

Electoral Arrangements.

The following provisions, *inter alia*, were agreed by the Conference :

(i) The qualifications for voters in elections to the Regional Houses of Assembly should in future be the same as for the Federal House of Representatives.

(ii) Single-member constituencies should be created for the purpose of elections to the Regional Houses of Assembly.

(iii) Membership of the Western and Eastern Houses of Assembly should be increased to 124 and 146 respectively, each Federal constituency being divided into two single-member constituencies.

(iv) After independence, members of the Federal Electoral Commission should be appointed by the Governor-General at his discretion, after consultation with the Federal Prime Minister ; they would include one member chosen to represent each Region.

(v) There should be an electoral commission for each Region.

(vi) After consultation with the Federal Prime Minister, the Governor of each Region should appoint a Commission to delimit the boundaries of Regional constituencies in accordance with Regional legislation.

(vii) Further revision of Regional constituency boundaries after rulings by the Regional Delimitation Commissions should be the responsibility of the Federal Electoral Commission.

(viii) Legislation concerning Federal elections should be the responsibility of the Federal Government, and that concerning Regional elections of the Regional Governments. To facilitate the administration of electoral procedure, Regional legislation should follow Federal legislation as closely as possible. After independence, electoral legislation would no longer take the form of regulations laid down by the Governor-General and the Regional Governors, but would be enacted by the appropriate legislatures.

(ix) The Constitution should provide that *ex-officio* members of the House of Chiefs or of the Senate (when constituted) should be disqualified from standing for election to the House of Representatives.

National Security.

The Conference agreed that, after independence, the Federal Government should possess adequate powers to ensure the safety of Nigeria against internal and external threats, and that the Emergency Powers Orders in Council (1939 and 1956) should cease to have effect within six months after attainment of independence. In place of these Orders (and of section 135 of the Order in Council of 1954) the new Constitution would provide the Federal Legislature with powers to make laws for the peace, order and good government of any Region—or of the Southern Cameroons—with respect to any matter (whether included in the legislative lists or not) in the following eventualities :

(*a*) If a state of war or other public emergency was declared to exist by the Federal Government.

(*b*) If the Federal Legislature was satisfied that Nigerian democratic institutions were threatened by subversion.

(*c*) If the Federal Legislature was satisfied that the executive authority of a Region or of the Southern Cameroons was being exercised to the prejudice of the executive authority of the Federation, or so as to endanger the continuance of Federal government.

Matters not included in the Federal Legislative Lists would only be affected by legislation passed in the above circumstances as long as the appropriate resolutions, passed by both Houses of the Federal Legislature, remained in force. Such resolutions would require an ordinary simple majority in situation (*a*) and a two-thirds majority of all Members in both Houses in situations (*b*) and (*c*). They would normally be effective over a period of 12 months, unless specifically providing for a shorter period, and might be extended for further periods of 12 months by subsequent resolutions passed under the conditions.

Nigerian Citizenship.

The Constitution should lay down the qualifications and disqualifications for Nigerian citizenship, and provide that no Nigerian citizen should be liable to deportation or exclusion from Nigeria.

An *ad hoc* committee of the Conference delegates will be set up in Nigeria under the chairmanship of the Governor-General to study the further implications of Nigerian citizenship ; if possible, it will complete its work by the end of April 1959.

Overseas Representation.

Ordinary Public Service posts (including the less senior posts in the Overseas Service) should be filled on the advice of the Public Service Commissions without governmental intervention, while the more senior appointments should be made by the Government concerned. After independence, there should be no further Regional representation in countries outside the United Kingdom.

Constitutional Amendments after Independence.

Because single units of a Federal State are interdependent, the Conference agreed that no single unit (including the Federation itself) should, in principle, be empowered to amend its Constitution in a manner contrary to the general interests of Nigeria as a whole. An exception was provided, however, in the case of those parts of the Federal and Regional Constitutions which were essentially of internal concern. Any amendment of these " ordinary " provisions would require a majority of not less than two-thirds of the total membership of both Houses of the Federal Legislature or of the Regional Houses of Legislature, as the case might be, but would not need the concurrence of any other unit of the Federation. Proposed constitutional amendments which were of general concern would be regarded as " entrenched," and would require the concurrence of a two-thirds majority in both Houses of the Federal Legislature as well as a similar majority in the Houses of the Region or Regions concerned.

Proposal for Niger Delta Development Board.

It was proposed that provision should be made in the Constitution for a Niger Delta Development Board to investigate questions relating to agriculture, fisheries, land tenure, and forestry, and to carry out surveys on the basis of which development schemes could be drawn up and submitted to the Federal and Regional Governments.—(Cmnd. 569 - Times - Daily Telegraph - Manchester Guardian - Commonwealth Survey)

(Prev. rep. 16381 A ; 16338 A ; 15747 A.)

A. MONGOLIA. — Marshal Zedenbal appointed First Secretary of Communist Party.

Moscow Radio announced on Nov. 22 that the Prime Minister of Mongolia, Marshal Yumzhagmin Zedenbal (Tse Den-bal), had been concurrently appointed First Secretary of the Mongolian People's Revolutionary (Communist) Party in succession to M. Dashin Damba, who had resigned from the post of First Secretary in the interests of " improved leadership " but would remain Second Secretary. It was also announced that the other party secretaries had been relieved of their posts " in connexion with their assignment to other duties," no further details being given.

Marshal Zedenbal (42) has been Prime Minister since 1952 and was secretary-general of the Mongolian Communist Party from 1940-1954, having thus combined the party leadership and the premiership on a previous occasion. During the Second World War he was Deputy C.-in-C. of the Mongolian Army. (New York Times) **(Prev. rep. 12261 A.)**

B. PORTUGAL. — New Corporations.

The Minister of Corporations, Dr. Veiga de Macedo, announced on Sept. 22 that the corporations for trade and industry had been set up in accordance with the law of Aug. 22, 1956. [This law provided for the establishment of six corporations, of which four had been created in September 1957.]

The corporation for industry will consist of the following sections : mining, energy and fuels ; building glass and ceramics ; food ; textiles and clothing ; tanning and footwear ; cork ; chemicals ; paper and graphic arts ; metallurgy ; and various processing industries.

Dr. de Macedo stated that the delay in setting up the corporations for trade and industry had been due to difficulties in their organization ; it might be necessary at a later stage to modify the present arrangements by establishing separate corporations for certain activities such as the textile and metallurgical industries.—(Bank of London and South America)

(Prev. rep. 15846 E.)

A. NEW ZEALAND - UNITED KINGDOM. — New Trade Agreement. - Reduced Preferences for British Goods in New Zealand Market.

The heads (i.e. principles) of a new trade agreement revising the preference margins enjoyed by British goods in the New Zealand market under the 1932 Ottawa Agreement were signed in Wellington on Nov. 25 by the N.Z Prime Minister, Mr. Nash, and the U.K. High Commissioner, Sir George Mallaby.

Negotiations for a review of the provisions of the Ottawa Agreement took place in London from April 17 to Aug. 22, when it was agreed that they should be resumed at ministerial level immediately after the Commonwealth Trade and Economic Conference in Montreal. It was announced on Sept. 12 that agreement in principle had been reached in the resumed negotiations.

The Heads of Agreement—which applied as from Nov. 25 to trade between the two countries, and which modified both the 1932 Ottawa Agreement and the 1957 agreement on agricultural and marketing policies (see 15594 A)—laid down :

(1) The U.K. Government would maintain the entry free of duty (other than revenue duty) of N.Z. goods which were now free of duty, except in cases where there was no active N.Z. trade interest.

As regards preferences :

(*a*) The U.K. Government would maintain the existing guaranteed margins of preference on the N.Z. goods mentioned in Annex A ;

(*b*) The U.K. Government would consult the N.Z. Government before reducing margins of preference which exceeded existing guaranteed margins on the goods mentioned in Annex A, and existing margins on other goods provided there was an active New Zealand trade interest.

(2) As regards the tariff treatment of U.K. goods, the N Z. Government would ensure that :

(*a*) Protection would be afforded only to industries which were reasonably assured of sound opportunities for success ;

(*b*) The tariff would be based on the principle that protective duties would not exceed a level that would give U.K. producers full opportunity of reasonable competition on the basis of the relative cost of economical and efficient production ; however, in the application of this principle special consideration might be given to industries not fully established and to industries essential for defence purposes. This provision would not prevent the imposition of a most-favoured-nation rate of duty if the N.Z. Government decided it was necessary to protect N.Z. producers from the competition of most-favoured-nation countries ; in such cases the duty on U.K. goods would be fixed at the lowest level consistent with the provisions of the General Agreement on Trade and Tariffs (GATT) ;

(*c*) U.K. producers would be entitled to full rights of hearing before any body constituted by the N.Z. Government to advise regarding the tariff.

(3) The limitation of New Zealand's right to increase duties on U.K. confectionery, apparel and ready-made clothing, hosiery, and silk and artificial silk piece-goods, would no longer apply.

(4) The N.Z. Government would be free to reduce the existing preferential margins accorded to U.K. goods ; but, where there was an active U.K. trade interest, not below the following margins of preference : (*a*) for the goods listed in Annex B, 5 per cent ; (*b*) for the goods listed in Annex C, 7½ per cent ; (*c*) for goods not included in Annexes B and C, 10 per cent.

In respect of goods on which the margin of preference was now lower than specified in sub-paragraphs (*a*), (*b*) and (*c*) above and in which there was an active U.K. trade interest, New Zealand would maintain that lower margin of preference.

The N.Z. Government would consult the U.K. Government before reducing any margins of preference at present in operation except : (i) in respect of the goods listed in Annexes B and C ; (ii) where such reduction followed a specific recommendation of any body constituted by the N.Z. Government to advise regarding the tariff ; (iii) where there was no active U.K. trade interest.

(5) Notwithstanding the above-mentioned provisions, the N.Z. Government might suspend, reduce, or remit duties in the circumstances specified in the relevant provisions of N.Z. legislation. Where such action would have the effect of reducing or eliminating a margin of preference required by the Agreement, and where the availability of suitably equivalent goods from the U.K. was a material consideration, the N.Z. Government would first consult the U.K. Government and take into account any of its representations, without limiting the right of the N.Z. Government to suspend, reduce or remit such duties.

(6) The N.Z. Government undertook, on a basis of reciprocity, to maintain in respect of British dependent territories the tariff preferences accorded in the 1932 Agreement, and any other tariff preferences for the time being accorded to the U.K., pending further discussions regarding new reciprocal tariff arrangements between the N.Z. and U.K. Governments (in consultation as necessary with the Governments of the territories concerned).

The U.K. Government, for their part, undertook to invite the Governments of the dependent territories to maintain, in the meantime, the preferential tariff treatment at present accorded by those territories to imports of N.Z. produce.

(7) The two Governments recognized that each country's trade with the other might be materially injured by competition from dumped or subsidized exports from third countries. They agreed that, if after consultation it was established that such injury was being caused or threatened, each Government would consider remedial action consistent with its own laws and international obligations.

(8) The two Governments would consult on other matters affecting trade between them, at the request of either Government.

(9) The application of the Ottawa Agreement in respect of Northern Rhodesia and Nyasaland would not be affected

Agreed Statement on Trading Policies.

The following statement was agreed between the two Governments in regard to their respective trading policies :

" The Government of the United Kingdom and the Government of New Zealand reaffirm their belief in a system of multilateral trading, and their desire within such a system to continue their traditional policy of expanding trade between the two countries to their mutual benefit.

" The two Governments, in the operation of their import licensing systems, ensure that any action taken does not conflict with their obligations under GATT to operate their controls in a non-discriminatory manner. The U.K. Government affirms that it does not apply any restrictions to imports from New Zealand, and the N.Z. Government affirms that in the administration of any restriction of imports it accords to the United Kingdom terms no less favourable than those accorded to any third country.

" It is accepted by the two Governments that in certain conditions New Zealand might resort to a limited measure of bilateral trading through the conclusion of special arrangements with third countries without causing serious harm to U.K. trade. The N.Z. Government affirms that its object in concluding any such special arrangements would not be the diversion of existing trade from the U.K. but the creation of new trade by finding outlets for that part of N.Z. production which cannot be absorbed at remunerative prices on the U.K. market."

Goods affected by New Agreement.

Goods listed in **Annex A** (free entry into the U.K.) included dairy products, dried vegetables, fresh apples, pears and quinces, grass and clover seed, honey, meat extracts and preparations, tallow, and most kinds of leather.

Goods listed in **Annex B** (enjoying a preferential margin of at least 5 per cent in New Zealand) included many iron and steel products, chemical substances, and aircraft, tractors, and their engines.

Goods listed in **Annex C** included dyes ; penicillin ; sheep-dip, certain medicinal preparations ; vitamins ; surgical and dental instruments ; leathercloth ; elastics and elasticized fabrics ; wool mending yarns ; silk, raffia and jute piece-goods ; silk yarns ; sheet and safety glass ; lenses ; ball- and roller-bearings ; chains ; filters, cash registers ; typewriters, etc. ; agricultural implements and machinery, electric motors, generators, and transformers, vacuum tubes ; electric locomotives ; telegraphy appliances ; insulated cable and wire ; sparking plugs, measuring and testing machines ; mining and other machinery ; sheet metal ; boiler tubes ; iron and steel pipes ; printing type ; wire netting, gums and resins ; and veneers.

Exports of British manufactures to New Zealand were valued at nearly £140,000,000 in 1957, goods accounting for about nine-tenths of this total entering at the preferential rates of duty guaranteed under the Ottawa Agreement. [The latter provided that if the margin of preference for British goods was more than 20 per cent, New Zealand had the right to reduce it to 20 per cent, but not below.] The lists covering U.K. goods for which New Zealand will in future have the right to reduce preferential margins to 5, 7½, and 10 per cent respectively account for about 85 per cent of total British exports to New Zealand.

Sir David Eccles, President of the U.K. Board of Trade, said that the terms of the agreement with New Zealand followed " broadly the pattern of our agreement with Australia concluded two years ago " [see 15229 A] and took into account " the substantial changes since the war in the pattern of world trade and in the economic circumstances of both countries."

Mr. Nash stressed that New Zealand retained all existing rights and preferences for her goods entering the British market ; while giving " new flexibility to New Zealand's international trading and negotiating position," the new agreement ensured that the mutual beneficial economic partnership between the U.K. and New Zealand would continue. He added that " New Zealand must be able to produce at competitive prices, and to do this it is essential that we have access to imported plant and raw materials on the most favourable basis. We must also be assured of markets for our increasing production."

Mr. Nash explained that preferences granted by New Zealand to the U.K. under the Ottawa Agreement were expressed as a percentage of the value of the goods ; these preferences had retained their full effect even though values had risen. On the other hand, preferences granted by the U.K. took the form of specific duties related to quantities ; with the general rise in prices, the incidence of these duties had diminished to such an extent that they had largely lost their effectiveness, and hence their value to New Zealand.

The Heads of Agreement will form the basis of a formal agreement (to be worked out) which will operate for an indefinite period, subject to six months' notice by either side. Under the 1957 agreement, New Zealand farm products will be given unrestricted entry into the United Kingdom until 1967.—(Board of Trade Journal - Times - Daily Telegraph - Manchester Guardian - N.Z. Directorate of Information) **(16264 A ; 15594 A.)**

A. BRAZIL. — Congressional and Gubernatorial Elections. - New Senate and Chamber of Deputies.

Elections took place in Brazil on Oct. 3 for a new Federal Chamber of Deputies, one-third of the Federal Senate, 11 State Governors, and many State and municipal assemblies, the results being as follows :

Chamber of Deputies.

	*New House Seats	Old House Seats
Partido Social Democrático (Social Democratic Party)	113	113
União Democrática Nacional (National Democratic Union)	72	72
Partido Trabalhista Brasileiro (Brazilian Labour Party)	60	58
Partido Social Progressista (Progressive Socialist Party)	27	31
Partido Republicano (Republican Party)	21	14
Partido Libertador (Liberation Party)	4	10
Partido Trabalhista Nacional (National Labour Party)	7	6
Partido de Representação Popular (Popular Representation Party)	4	4
Partido Socialista Brasileiro (Brazilian Socialist Party)	8	3
Partido de Representação Trabalhista (Labour Representation Party)	2	1
Partido Social Trabalhista (Socialist Labour Party)	2	—

*The membership of the new House was increased from 312 to 320.

The representation of the two principal parties thus remained unchanged, but the Brazilian Labour and National Labour parties, the Republican Party, and the Brazilian Socialist Party all increased their strength at the expense of the Progressive Socialist Party. In the former Chamber the Government was supported by President Kubitschek's Social Democratic Party and Vice-President Goulart's Brazilian Labour Party, whilst the National Democratic Union was in opposition. In the election campaign, however, the Brazilian Labour Party and the Social Democratic Party opposed each other.

Of the total electorate of nearly 14,000,000, about 13,700,000 voters went to the polls ; voting was compulsory, but illiterates had no franchise. Although the election campaign was bitterly contested, the elections themselves passed off without serious incident.

Senate.

The composition of the new Senate was as follows :

	Seats
Social Democratic Party	20
National Democratic Union	16
Brazilian Labour Party	15
Liberation Party	3
Progressive Socialist Party	3
Republican Party	2
Popular Representation Party	1
National Labour Party	1
Brazilian Socialist Party	1
Independents	1

Both the Social Democrats and the Brazilian Labour Party maintained their previous strength of 20 and 15 seats respectively ; the National Democratic Union gained 7 new seats, bringing its strength to 16 compared with 9 previously.

Among the more important results of the Senate elections were (1) the victory in Rio de Janeiro of Senhor Afonso Arinos (National Democratic Union) over Senhor Luthero Vargas (Brazilian Labour Party), the son of the late President Vargas, who was openly supported by the secretary-general of the Communist Party, Senhor Luis Carlos Prestes ; (2) the victory in São Paulo of Father Benedito Mario Calazans de Arouzo (National Democratic Union), a politically unknown Catholic priest, over Senhor Roberto Frota Moreira, the candidate of the Brazilian Labour Party, who was regarded as a Communist sympathizer.

Gubernatorial Elections.

The most important of these were in São Paulo and Rio Grande do Sul. In São Paulo, Senhor Adhemar de Barros (mayor of São Paulo City and a former Governor of the State), standing for the Progressive Socialist Party and supported by the Brazilian Labour Party and the Communists, was defeated by Professor Carvalho Pinto (National Democratic Union), an economist of right-wing leanings. In Rio Grande do Sul, Senhor Leonel Brizzola (Prefect of the city of Porto Alegre and a brother-in-law of Vice-President Goulart) won the governorship. The newly-elected Governor of Rio de Janeiro was also a candidate of Vice-President Goulart's Brazilian Labour Party.—(Brazilian Embassy, London - Bank of London and South America Fortnightly Review - New York Times)

(Prev. rep. 14479 A.)

B. WESTERN GERMANY. — Landtag Elections in Bavaria and Hesse.

Elections to the Bavarian and Hessian *Landtage* were held on Nov. 23, provisional official results being as follows :

Bavaria.

	Seats 1958	Seats 1954	Votes 1958	Percentage 1958	Percentage 1954
Christian Social Union	101	83	4,192,384	45.6	38.0
Social Democrats	64	60	2,838,592	30.9	28.1
All-German Bloc*	17	19	793,120	8.6	10.2
Bavarian Party	14	28	741,763	8.1	13.2
Free Democrats	8	13	510,884	5.5	7.2
Others	—	—	123,351	1.1	—

* Refugee Party.

Although the C.S.U. poll increased by 7.6 per cent as compared with the last (1954) *Landtag* elections, it dropped by 11.3 per cent compared with the 1957 Federal elections. All the other major parties, on the other hand, polled better than in the Federal elections, when the Social Democrats polled only 26.9 per cent, the All-German Bloc 6.8 per cent, the Bavarian Party 3.2 per cent, and the Free Democrats 4.4 per cent.

Hesse.

	Seats 1958	Seats 1954	Votes 1958	Percentage 1958	Percentage 1954
Social Democrats	48	44	1,235,014	46.9	42.6
Christian Democrats	32	24	843,077	32.0	24.1
Free Democrats	9	21	250,313	9.5	20.5
All-German Bloc	7	7	193,974	7.4	7.7
German Party	—	—	93,226	3.5	1.2
Others	—	—	17,892	0.7	3.4

As in Bavaria, the Christian Democratic poll was considerably less than in the 1957 Federal elections (40.9 per cent), whilst the Social Democrats increased their percentage from 38 per cent to 46.9 per cent ; the Social Democratic increase thus exactly balanced the fall in the Christian Democratic vote. Compared with the last *Landtag* elections, however, the Christian Democratic gains were greater than those of the Social Democrats, though the latter remained the largest party, equalling the combined strength of the other three parties represented in the Hessian *Landtag*. The Free Democratic poll fell by 11 per cent, the party losing 12 seats to the Social Democrats and Christian Democrats ; in the last Federal elections the Free Democrats polled 8.5 per cent. The All-German Bloc maintained its position, showing a higher poll compared with the Federal elections.

Polling in Bavaria was 76.5 per cent of the electorate, against 88.1 per cent in the 1957 Federal elections. In Hesse the poll was 82.3 per cent, compared with 89.1 per cent in the Federal elections and 82.4 per cent in the last *Landtag* elections. (Frankfurter Allgemeine Zeitung) **(Prev. rep. State Elections, 16465 A ; 16320 A ; 15888 A ; Bavaria, Hesse, 14022 A.)**

C. INTERNATIONAL TIN COUNCIL. — Rejection of Soviet Request for Observer Status. - Soviet Offer of Co-operation on Tin Exports.

The International Tin Council announced on Nov. 6 that it had rejected the Soviet Union's request to join the Council as an " observer member," since there was no provision in the International Tin Agreement permitting countries to have the status of " observers." The Council added, however, that the U.S.S.R. was willing to co-operate with it and had requested its chairman to maintain contact with the Soviet trade delegation in Britain in order to keep problems concerning the tin position under consideration. M. Georges Péter, chairman of the I.T.C., stated on Nov. 7 that Soviet willingness to co-operate with the Council applied to the question of exports, but that such co-operation had so far been agreed in principle only.

Total permissible exports for the six producing member-countries of the International Tin Agreement were fixed at 20,000 tons for the first quarter of 1959—the same quantity as for the fourth quarter of 1958. (Times - Financial Times)

(Prev. rep. 16407 A.)

D. SIAM. — Ban on Opium Smoking.

The Prime Minister of Siam (Field-Marshal Sarit Thanarat) announced on Dec. 11 that opium smoking—at present permitted under licence—would be banned from June 30, 1959. An estimated 80,000 to 100,000 Siamese are addicted to opium smoking, and the Government had announced in August that the equivalent of £550,000 would be spent over a four-year period for the rehabilitation of addicts. The number of licensed opium houses has already been reduced from 1,200 to 990.

(Manchester Guardian)

DECEMBER 13—20, 1958

A. FRANCE. — The Constitutional Referendum. - Overwhelming Majority for New Constitution.

The Constitution of the Fifth Republic (see 16529 A) was submitted on Sept. 28 to a national referendum throughout metropolitan France, Algeria, and all the oversea departments and territories. It was overwhelmingly approved in the metropolitan territory, Algeria, and every part of the French Union except Guinea, which was the only territory to show a majority of "no" votes.

The decision to hold the Constitutional referendum on Sept. 28 was taken by General de Gaulle's Government on Aug. 6; all adult inhabitants of France (including Algeria) and the French Union were declared eligible to vote, while French nationals living abroad were given the opportunity to record their votes at French embassies and consulates, either in person or by post.

On Sept. 23 the *Journal Officiel* published a list of 23 parties and political groups (all had previously registered with the Minister of the Interior) which would be allowed to conduct political propaganda during the referendum campaign—e.g. to exhibit posters and to receive broadcasting and television facilities—for or against the new Constitution. The 23 parties and groups included all those represented in the Parliament of the Fourth Republic, together with the many new parties and organizations which had come into existence since the Algerian uprising of May 13.

A description is given below of (1) the referendum campaign in metropolitan France; (2) the referendum campaign in Algeria; (3) General de Gaulle's pre-referendum tour of the French colonial territories in Africa (*Afrique noire*), made with the express purpose of explaining the choices open to those and other oversea territories under the Constitution; (4) the attitude taken by the various African parties toward the new Constitution; and (5) the detailed results of the referendum in metropolitan France, Algeria, and the oversea territories and departments.

The Referendum Campaign in France.

The referendum campaign in metropolitan France was opened by General de Gaulle on Sept. 4 in an open-air speech to a crowd of over 100,000 in the Place de la République, in the heart of the working-class district of eastern Paris. Although there were scuffles with Communist and other left-wing demonstrators, the meeting was not disrupted and the General was enthusiastically acclaimed by vast numbers of people.

In a 20-minute speech General de Gaulle dwelt on the incapacity of the political system of the Fourth Republic, which had finally resulted in the "paralysis of the State" and a grave national crisis. When his Government had been legally constituted on June 1, it had just been possible to save the nation from the destruction which seemed inevitable at the time. The new Constitution, he emphasized, had been carefully worked out and drafted by a large number of people of diverse origins and views; it was designed not for a dictatorship but for a Republican Government based on liberty and justice and capable of governing effectively.

After appealing to the nation to vote "yes" in the constitutional referendum, General de Gaulle declared: "This Constitution has been drawn up for the people we are and the world and century in which we live. It means effective direction; a national arbiter above political fights; a Government which will be capable of governing; a Parliament which represents the political will of the nation without exceeding its role. This means that the Government and Parliament must work together but remain separate. . . . With all my heart, in the name of France, I call upon you to vote 'yes.' If you do not do so, we shall on that very same day revert to the mistakes that you know so well."

In the course of his speech General de Gaulle laid emphasis on the principle of "free determination," embodied in the new Constitution, whereby the oversea territories would have the opportunity to decide for themselves on their future relationship with France.

In the week preceding the referendum General de Gaulle made a "whistle-stop" tour in which he made similar speeches and appeals in Bordeaux, Lille, Rennes and Strasbourg; as in Paris, he was given an enthusiastic reception in all these cities. In a final eve-of-the-referendum broadcast on Sept. 26, the General again appealed for a "massive" vote in favour of the new Constitution, declaring that he was "entrusting the destiny of France to every man and woman."

The non-Communist campaign against the new Constitution was led by M. Mendès-France, supported by a number of political personalities who had opposed the Constitutional Reform Bill in the National Assembly—among them M. Mitterrand, of the U.D.S.R. At a press conference on Sept. 5, M. Mendès-France set forth in detail the objections of himself and his supporters to the new Constitution and criticized the methods for holding the referendum.

M. Mendès-France maintained that the referendum would be in the nature of a personal plebiscite for or against General de Gaulle, instead of a vote on what should be a constitutional issue. He asserted that the Government and its supporters were trying to "blackmail" the people into believing that the choice lay between "the Communists and a Popular Front, civil war and the paratroopers, or a return to the Fourth Republic." Although he himself was sure that General de Gaulle did not want the referendum to be held in terms of this "triple choice," he feared that the General was under the pressure of the elements which brought him to power.

Criticizing the conditions under which the referendum would be held, M. Mendès-France alleged that the official pressure brought to bear on the people—by utilization of every medium of propaganda, and the mobilization of the public authorities in the interests of the referendum—was greater than at any time since the Second Empire. In Algeria, the referendum could not possibly be held freely, since the Opposition press was silenced and the Nationalist leaders were unable to express themselves openly; he believed that a vote under these conditions would "discredit still further in Moslem eyes the Western principles of political consultation"

As regards the new Constitution itself, M. Mendès-France attacked in particular the indirect method of electing the President of the Republic, maintaining that he would have almost sovereign powers under the new Constitution and could promulgate a "legal dictatorship" in an emergency. He (M. Mendès-France) knew that General de Gaulle was not the type of man to become a dictator, but he feared that the constitutional provisions might result in some form of dictatorship being established eventually.

M. Mendès-France agreed that the Fourth Republic was "dead" and that a return to it was "unthinkable." He proposed, therefore, that all those opposed to the new Constitution should enter into a "compact" to promote the following alternative plan: (1) the holding in November of general elections for a new Constituent Assembly, the voting system to be similar to the British single-member constituency system; (2) the drafting by this Constituent Assembly of a Constitution which "must not be rigid or heavy-handed like the one adopted in 1946 or the one now proposed"; (3) the strengthening of the Executive by giving it the right to dissolve Parliament, as in Britain.

The parties supporting the new Constitution included the Independents (conservatives) and *paysans*, the M.R.P., a large majority of the Socialist Party, the Social Republicans (Gaullists), the majority of the Radical Party (i.e. the "anti-Mendesian" section), the Dissident Radicals and the R.G.R. group, most of the U.D.S.R. group, and the numerous pro-Gaullist parties and groups formed since the Algerian uprising, including M. Soustelle's *Union pour la Nouvelle République*. Those parties and groups opposing the Constitution included the "Mendesian" Radicals and their supporters from other parties, a minority of the Socialist Party, the Communists, the Poujadists, and the new group formed by M. Daniel Mayer under the designation *Union des forces démocratiques*. [The attitude of the various parties and groups is described in the issue dated December 20-27, 1958.—*K.C.A.*]

The Referendum Campaign in Algeria.

A series of decrees for the holding of the referendum in Algeria and the Sahara was published by the French Government on Aug. 14 and Sept. 19, after consultation with General Salan, the military commander and chief civil administrator in Algeria. The principal provisions were:

(1) A central control commission would be set up in Algiers to supervise the referendum throughout Algeria and the Sahara.

(2) Regional control commissions would be appointed for each of the Algerian *départements*.

(3) Local control commissions would supervise the voting in rural areas.

(4) Sealed ballot-boxes from village polling-stations would be brought by the Army to regional headquarters, where they would be opened under the supervision of the appropriate regional control commission.

(5) Voting in the principal Algerian cities would take place on Sept. 28, as in France.

(6) In the rural areas, voting would be spread over three days—Sept. 26, 27 and 28—to ensure that the terrorists did not attack polling stations or prevent the population from going to the polls.

(7) The Army would protect polling-booths against possible rebel attacks, ensure that voters cast their votes without interference or intimidation, protect them from possible rebel reprisals after the vote, and furnish transportion for voters in outlying areas.

(8) All adult citizens in Algeria would be eligible to vote, both European and Moslem, and Moslem women would possess the franchise equally with men. European and Moslem voters would use the same polling-stations, but special booths would be provided for veiled Moslem women. Ballot-papers would be printed in three languages—French, Arabic and Kabyle.

(9) Electors normally resident in Algeria, but outside the territory at the time of the referendum, would be able to vote by post.

(10) New groups or parties formed in Algeria [since May 13] would be able to participate in the referendum campaign.

(11) The above provisions would apply equally to the two Saharan departments—Oasis and Saoura.

The central control commission referred to in (1) above was set up on Sept. 2 under the chairmanship of M. Henri Hoppenot, a career diplomat who served during the Second World War as General de Gaulle's representative in Washington. Its members were nearly all high-ranking jurists in France or Algeria, and included both Europeans and Moslems—among the latter being M. Salah Mahdi, president of the Algiers *Cour d'appel*. The various regional commissions, comprising 85 members in all, were appointed on Sept. 11 ; like the central control commission, they consisted mainly of magistrates and other legal personalities, and included many Moslems.

In a broadcast on Sept. 12, M. Hoppenot emphasized that the central control commission and the subsidiary regional and local commissions were " guarantees by the Government of the Republic . . . that liberty and sincerity of the vote will be exercised by all." He added : " This means that no elector can be forcibly prevented from voting ; that every elector is free to vote ' yes ' or ' no ' ; that every vote is strictly secret ; that every individual citizen, man or woman, can vote freely according to their consciences."

During a two-day visit to Algiers (Aug. 28-29) following his tour of the African colonial territories (see below), General de Gaulle declared in a broadcast that every Algerian who voted "yes" in the referendum would "show that he wishes to behave as a Frenchman with equal rights, and that he thinks that the evolution of Algeria must be accomplished within a French framework."

" On Sept. 28," said General de Gaulle, " Algerians of all communities, in complete equality, will exert a direct influence on the fate of France by one word—' yes ' or ' no.' It will depend partly on their vote whether our national institutions will be renewed or whether we shall return to the misguided road which brought the Republic to the edge of the precipice. Their vote will also establish on a new basis the relations of metropolitan France and Algeria with the African territories. . . . Finally, by their vote the inhabitants of Algeria will help to decide the question of their own destiny."

In the course of his broadcast General de Gaulle emphasized the Government's determination to complete its task in Algeria despite all obstacles ; to develop industry, agriculture, education, and social services ; to raise the living standards of all sections of the community ; and to provide full employment for Algerians " from Dunkirk to Tamanrasset."

[Tamanrasset is a military outpost in the extreme south of the Sahara. The phrase " Dunkirk to Tamanrasset " was coined by M. Soustelle after the uprising of May 13 as a synonym for the complete integration of France, Algeria and the Sahara—the concept of France " one and indivisible " from the English Channel to the southern confines of the Sahara. The phrase has been widely adopted both in Algeria and France and has been frequently used by General Salan and other French leaders.]

In an eve-of-the-referendum message to Algeria, broadcast from Paris on Sept. 26, General de Gaulle urged the electorate to show by a massive " yes " vote their intention to participate in " the great political, economic, social and cultural work we have resolved to accomplish in order to transform Algeria, deliver its inhabitants from fear and poverty, and ensure the freedom and dignity of every man and woman."

General de Gaulle's Tour of African Colonies.

During the week Aug. 22-27 General de Gaulle made a 12,000-mile tour by air of the French colonial territories in Africa with the object of explaining the Constitutional provisions to the local populations—in particular, those provisions relating to the future status of the oversea territories. In the course of this tour he visited and made speeches in Tananarive (Antananarivo), the capital of Madagascar ; Brazzaville, capital of French Equatorial Africa ; Abidjan, in the Ivory Coast ; Conakry, in French Guinea ; and Dakar, in Senegal, capital of French West Africa. Before returning to Paris he paid a two-day visit to Algiers on Aug. 28-29 as stated above.

General de Gaulle received an enthusiastic welcome in Madagascar, Equatorial Africa, and the Ivory Coast but encountered considerable criticisim in French Guinea and Senegal—particularly from M. Sekou Touré, president of the *Conseil guinéen* (Prime Minister of Guinea).

In a speech at Tananarive on Aug. 22 to a crowd of 60,000, General de Gaulle said that the people of Madagascar, in common with the peoples of the other oversea territories, would have the choice between " separating their destiny completely from that of France " or of joining with France in a Federal Community with complete internal freedom ; the pledges given in the Constitution would exclude no solution, " not even secession." Speaking in reply, the Prime Minister of Madagascar (M. Philibert Tsiranana, a Socialist deputy in the National Assembly and a member of the Consultative Committee which helped to draw up the Constitution) warmly welcomed the prospect of a Federal Community linking France, Madagascar, and other oversea territories ; he called for the repeal of the Annexation Law of 1896, under which France took control of Madagascar, and ended his speech with the words : " Long live the Franco-Madagascan Community, long live the Madagascan Republic!"

Similar assurances were given by General de Gaulle in Brazzaville (Aug. 23) and Abidjan (Aug. 24), his reception in both cities being extremely enthusiastic. On Aug. 25, however, during the General's visit to Conakry, M. Sekou Touré made a strongly-worded speech in which he said that he and the Guinea branch of the R.D.A. (*Rassemblement Démocratique Africain*) would not support the Constitution because the right of the African peoples to full independence was not clearly written into its text, adding that " we prefer poverty in freedom to riches in slavery." At the same time M. Touré said that the people of Guinea, while intending to " exercise their sovereign right to independence," desired to remain in a Franco-African Community as citizens of a free African State.

Speaking in reply, General de Gaulle said that France had " no reason to blush for her work in Africa," nor would she prevent the African peoples from following the road of their choice , the question to be decided was whether Africans and " metropolitans " would work in a Community for their mutual economic, social and cultural advancement, and if necessary for the defence of liberty. If Guinea wanted independence, however, she could have it by voting " no " on Sept. 28.

In Dakar, General de Gaulle was met by a large crowd waving banners with the words " No to the Referendum " and " Immediate Independence " , for some time he had difficulty in making himself heard, and at one point he shouted " Why those banners ? You want independence ? Then take it ! " Large numbers of those present, however, were obviously favourable to the General, and at the end of his speech he received a tremendous ovation from thousands of Africans shouting in unison *Vive de Gaulle !*

In a press statement after General de Gaulle had left Conakry, M. Sekou Touré said : " For us to vote for the Constitution, it must assert not only in the preamble but in the text the right of the oversea peoples to independence. We remain partisans of a Franco-African Community."

Attitude of African Parties toward New Constitution.

The two major African parties—the *Rassemblement Démocratique Africain* (R.D.A.) and the *Parti du Regroupement Africain*—decided that their territorial branches should be free to choose for themselves whether or not to accept the new Constitution.

The leading personalities in the R.D.A. are M. Félix Houphouet-Boigny (Ivory Coast), one of the four Ministers of State in General de Gaulle's Government, and a member of many former Cabinets ; M. Sekou Touré, party leader in French Guinea ; and M. Gabriel Lisette (Chad), a member of the Consultative Committee which helped to draft the new Constitution. The principal P.R.A. leaders are M. Léopold Senghor and Senator Lamine-Gueye (both of Senegal), who were also members of the Consultative Committee. Among the R.D.A. leaders, the new Constitution was supported by M. Houphouet-Boigny and M. Lisette but was strongly opposed by M. Touré as stated above ; M. Senghor, M. Lamine-Gueye, and most other P R.A. leaders supported the Constitution.

Note.—It was incorrectly stated on page 16529 (first column) that M. Houphouet-Boigny is a member of the P.R.A. ; he is in fact one of the leaders of the R.D.A.

Both the R.D.A. and the P.R.A. have a number of affiliated parties in the African territories, under different designations. The attitude adopted by the various African parties in the individual territories is summarized below :

French West Africa.

Both the R.D.A. and P.R.A. (including affiliated parties) supported the new Constitution in Dahomey, Senegal, and the French Sudan, but opposed it in French Guinea. Elsewhere in French West Africa the R.D.A. supported the Constitution in the Ivory Coast, Niger and Upper Volta, while the Ivory Coast branch of the P.R.A. opposed it.

Dahomey. The *Union démocratique dahoméenne* (affiliated to the R.D.A.) and the *Parti progressiste dahoméen* (affiliated to the P.R.A.) both decided to support the Constitution.

Guinea. As stated above, the Constitution was opposed by the territorial branches of both the R.D.A and the P.R.A., the former being much more influential in the Colony than the latter.

Ivory Coast. The Constitution was supported by the *Parti démocratique de la Côte d'Ivoire* (R.D.A.), led by M. Houphouet-Boigny, and opposed by the *Regroupement des partis de la Côte d'Ivoire* (P.R.A.). M. Houphouet-Boigny (an African) has a strong personal following in the territory, of which he was formerly Governor. The P.R.A. has little influence in the Ivory Coast.

Mauritania. The *Parti du regroupement mauritanien* supported the Constitution. There are no Opposition groups of any importance, most of their leaders being refugees in Morocco. The P.R.M. is led by M. Moktar Ould Daddah, president of the Mauritanian Council of Government.

Niger. The *Parti progressiste nigérien* (R.D.A.) supported the Constitution, whilst the Niger branch of the P.R.A. was divided.

Senegal. The *Union progressiste sénégalaise* (P.R.A.) and the *Mouvement populaire sénégalais* (R.D.A.) both supported the Constitution, although a minority group in the U.P.S. decided to vote " no." The Constitution was opposed by the *Parti africain d'indépendance* and by various students' and workers' organizations.

The U.P.S. (the Senegal branch of the P.R.A.) is led by M. Léopold Senghor, M. Mamadou Dia and Senator Lamine-Gueye, all prominent members of the French Parliament.

Sudan. Both the *Union soudanaise* (the territorial branch of the R.D.A.) and the Sudanese branch of the P.R.A. supported the new Constitution. The leader of the P.R.A. in the French Sudan is M. Hammadoun Dicko, a well-known Socialist deputy and a Secretary of State in several Governments.

Upper Volta. The *Parti démocratique unifié* (R.D.A.) supported the Constitution, while the *Mouvement du regroupement voltaique* (P.R.A.) was divided.

French Equatorial Africa.

The new Constitution was supported by all branches of the R.D.A. and P.R.A. in Equatorial Africa, and by all other territorial parties.

Chad. The *Parti progressiste tchadien* (R.D.A.) and the *Mouvement socialiste africain* both decided to vote "yes." The P.P.T. is led by M. Gabriel Lisette, who is one of the leaders of the R.D.A. as stated above.

Gaboon. The *Bloc démocratique gabonais* (R.D.A.) and the *Union démocratique et sociale du Gabon* both supported the Constitution.

Middle Congo. The *Union démocratique pour la défense des intérêts africains* (R.D.A.) and the *Parti progressiste congolais* both supported the Constitution.

Ubangui-Shari. The Constitution was supported by the *Mouvement pour l'émancipation de l'Afrique noire*, the only important party in the territory.

Madagascar and French Somaliland.

The Constitution received support from all the leading Madagascan and Somali parties.

Madagascar. The principal parties supporting the Constitution were the Socialist Party led by M. Philibert Tsiranana, president of the *Conseil malgache* (Prime Minister of Madagascar), and a number of parties grouped under the designation *Partis du congrès de Tamatave*. The Roman Catholic hierarchy in the island—which has much political influence—also appealed to the electors to vote "yes."

A number of minor Madagascan parties opposed the Constitution, among them the *Union du peuple malgache* (pro-Communist). Appeals for a "no" vote were also made by the mayor of Tananarive (M. Stanislas Rakotonerina) and by several Madagascan politicians in exile.

Somaliland. The two leading Somali parties—the *Mouvement de l'union républicaine* and *Parti de défense des intérêts économiques et sociaux du territoire*—both supported the Constitution, although the leader of the M.U.R. (M. Mahmoud Harbi, president of the Council of French Somaliland) called for a "no" vote.

Results of the Referendum. - Massive Support for New Constitution in Metropolitan France, Algeria, and Oversea Territories and Departments.

In the referendum held on Sept. 28 throughout France, Algeria, and the French Union, the voters were asked to reply "yes" or "no" to the question: "Do you approve the new Constitution presented to you by the Government of the Republic?" It resulted in a massive majority in favour of the new Constitution in metropolitan France, Algeria, and all the oversea departments and territories except Guinea, which, as stated above, was the only part of the French Union where "no" votes were in a majority.

The following official figures were published by the Ministry of the Interior on Oct. 4 showing the final results for metropolitan France, Algeria and the Sahara, the oversea departments (i.e. Guadeloupe, Martinique, Réunion, and French Guiana), and the oversea territories:

	Votes cast	Per cent	"Yes" votes Total	Per cent	"No" votes Total	Per cent
Metropolitan France ..	22,596,850	84.9	17,668,790	79.2	4,624,511	20.8
Algeria ..	3,515,210	79.6	3,357,763	96.5	118,631	3.5
Oversea territories	236,312	83.7	232,113	98.6	3,289	1.4
Oversea departments	9,911,327	70.0	9,221,585	93.5	632,606	6.5

In addition, the Ministry gave the results of the voting in the Trust territories of Togoland and the Cameroons, in the New Hebrides, in the Wallis and Futuna Islands, and among French nationals living abroad. Voting in the two Trust territories was confined to Europeans, and in the New Hebrides (an Anglo-French condominium) to French citizens living in the islands.

Of the 11,403 votes cast in the Cameroons, 10,544 (96.6 per cent) were in favour of the Constitution and 368 (3.4 per cent) against; comparable figures for Togoland were 1,775 for the Constitution (92.6 per cent) and 142 against (7.4 per cent). In the New Hebrides, 536 French nationals voted for the Constitution (95.8 per cent) and 23 against (4.2 per cent). The 46 electors in the Wallis and Futuna Islands voted "yes."

Of the votes cast by French nationals living abroad, 355,163 were in favour of the Constitution (95.8 per cent) and 15,246 against (4.2 per cent). Results from certain countries were published as follows: Morocco, 132,088 "yes" votes, 4,261 "no" votes; Tunisia, 50,449 "yes," 1,334 "no"; Belgium, 25,096 "yes," 1,124 "no"; Great Britain, 4,675 "yes," 287 "no." French nationals in Britain voted at the Embassy in London and the Consulates-General in Edinburgh and Liverpool.

The following grand totals were given by the Ministry of the Interior, excluding the voting in Guinea:

Total registered electors	45,840,642
Total votes cast	36,893,979 (80.4 per cent)
Total valid votes	36,486,251
Total "yes" votes	31,066,502 (85.1 per cent)
Total "no" votes	5,419,749 (14.9 per cent)

These figures covered all votes cast in metropolitan France, Algeria, and the Sahara, the oversea departments, the oversea territories (except Guinea), the Trust territories, the Wallis and Futuna Islands, the New Hebrides, and by French citizens living abroad.

Referendum Results in France.

The definitive results in metropolitan France (including Corsica) were as follows:

Total registered electors	26,606,948
Total votes cast	22,596,850 (84.9 per cent)
Total valid votes	22,291,303
Total "yes" votes	17,668,790 (79.25 per cent)
Total "no" votes	4,624,511 (20.75 per cent)
Abstentions	4,011,245 (15.1 per cent)
Spoiled or blank papers	304,000

The referendum thus resulted in an overwhelming majority of nearly 80 per cent in favour of the new Constitution, and correspondingly in a sweeping victory for General de Gaulle and his Government. Voting was very much higher and abstentions much lower than at any general election under the Fourth Republic, the poll being the highest since the liberation. It was pointed out by press commentators that in more than 60 departments the number of "no" votes was less than the Communist vote at the general election of 1956—the inference being that the Communists had lost ground throughout France; moreover, it was commented that large sections of the working-class had apparently voted for General de Gaulle against the advice of their leaders—e.g. in Lille, where "no" votes were 75,000 fewer than those of the Communists alone in 1956.

General de Gaulle received big majorities in every department, varying from over 90 per cent in eastern and western France (particularly in Alsace, Lorraine, and parts of Brittany and Normandy) to 64-69 per cent (the lowest figures) in certain departments of central and southern France. "Yes" and "no" percentages for the 90 departments of metropolitan France were as follows:

	"Yes"	"No"
Ain	83	17
Aisne	76.1	23.9
Allier	69.9	30.1
Alpes (Basses-)	74.1	25 9

Vienne (Haute-)	66.7	33.3
Vosges	88.1	11.9
Yonne	78.8	21.2

Voting in Paris and the leading provincial cities was as follows :

	"Yes"	"No"
Paris	1,114,924	320,890
Marseilles	242,887	88,779
Lyons	185,209	39,891
Bordeaux	103,517	16,586
Toulouse	98,140	35,264
Nantes	92,305	20,296
Nice	89,167	30,347
Lille	85,505	14,614
Strasbourg	80,930	8,913
Saint-Etienne	68,511	21,316
Le Havre	60,969	25,162
Nancy	54,821	6,727
Toulon	54,740	13,810
Roubaix	48,730	8,699
Brest	47,828	11,270
Le Mans	46,595	13,864
Rouen	45,739	14,444
Limoges	44,800	14,695
Angers	42,679	8,039
Grenoble	41,495	14,130
Clermont-Ferrand	40,838	11,719

"Yes" majorities were obtained in all the 20 *arrondissements* of Paris and in 44 of the 45 municipalities of the *banlieue* (the big suburbs in the Seine department outside the City of Paris itself) ; there was a small "no" majority in Bagnolet, in the so-called "red belt."

Referendum Results in Algeria.

The following figures of the voting in Algeria and the Sahara were published on Sept. 30 by the Minister of the Interior. They differed slightly from the overall figures published by the Ministry on Oct. 4 (see above), as definitive results from several outlying areas were not yet to hand and other results were still subject to verification :

*Total registered voters	4,402,250	
Total votes cast	3,505,719	
Total valid votes	3,477,181	
Total "yes" votes	3,356,969	(96.5 per cent)
Total "no" votes	118,615	(3.5 per cent)

* Comprising both European and Moslem electors, the latter being greatly superior numerically ; in the City of Algiers there were 104,206 Moslem and 25,864 European registered voters according to official figures.

Results in the Algerian and Saharan *départements* (in most cases provisional, and subject to final rectification) were given as follows :

	"Yes"	"No"
Algiers	583,628	26,534
Batna	173,941	8,354
Bône	291,546	7,018
Constantine	388,066	18,787
Médéa	13,374	178
Mostaganem	260,071	2,936
Oran	420,902	9,113
Orléansville	226,381	3,650
Sétif	310,214	15,498
Tiaret	156,373	1,629
Tizi-Ouzou	174,910	12,961
Tlemçen	131,089	4,641
*Oasis	152,761	1,862
*Saoura	79,352	1,427

* Saharan departments.

The percentage in favour of the new Constitution (over 96 per cent) was thus considerably higher in Algeria than in the metropolitan territory itself. Voting was very heavy among Europeans and Moslems in nearly all areas, and Moslem women —enfranchised for the first time—went to the polls in large numbers. As stated above, the referendum was the first Algerian election in which the Moslem electorate voted in complete equality with the European electorate.

About 87 per cent of the electorate voted in the departments of Algiers and Mostaganem, 85 per cent in Tiaret, 84 per cent in Oran, 83 per cent in Bône, 81 per cent in Orléansville, 78 per cent in Médéa, 77 per cent in Tlemçen, 76 per cent in Tizi-Ouzou, 71 per cent in Batna, and 57.7 per cent in Sétif.

In the Saharan territories many tribesmen travelled long distances to record their votes at Ghardaïa, Touggourt, Ouargla, Hassi-Messaoud, and smaller centres ; over 98 per cent of the votes were in favour of the Constitution.

All polling stations in Algeria were strongly guarded by troops and (in the Sahara) by the Foreign Legion to prevent possible terrorist attacks. Prior to the referendum the Algerian "Government-in-exile" had called upon the Moslem population to abstain from voting or, if this was not possible, to vote "no" —an appeal which apparently had little or no result. Isolated incidents occurred in different parts of Algeria during the referendum, but there were no concerted terrorist attacks during this period ; the worst incident occurred near Oran, where 19 French soldiers were killed in an ambush, and there were also some fatal casualties in bomb-throwing incidents in the Constantine and Tlemçen areas.

Both before and during the referendum the French military authorities in Algeria conducted large-scale psychological propaganda designed to ensure a high "yes" vote—e.g. by loud-speaker vans, postal displays, bands and processions, etc. French and foreign journalists, however, were allowed to visit polling stations in all parts of Algeria while the referendum was in progress ; they reported that the voting appeared to be fairly and freely conducted, without intimidation of any section of the electorate.

Referendum Results in Oversea Departments and Territories.

As stated above, large "yes" majorities were recorded in all parts of the French Union except Guinea. In nearly all territories there was a large turn-out of voters, figures being as follows (in some cases definitive but in most provisional and subject to final revision) :

Oversea Departments.

	"Yes"	"No"
Guadeloupe	53,945	14,222
Martinique	73,580	4,975
Réunion	83,621	5,248
French Guiana	7,281	385

Oversea Territories.

French West Africa.

	"Yes"	"No"
Dahomey	418,709	9,237
Guinea	18,012	636,281
Ivory Coast	1,553,704	197
Mauritania	175,464	10,898
Niger	187,000	45,000
Senegal	529,946	11,979
Sudan (French)	392,816	9,466
Upper Volta	768,639	6,822

These figures were provisional in all cases, though including a majority of polling stations; in the case of Niger the figures were approximate, with many results outstanding from outlying areas. The highest "yes" percentage was in the Ivory Coast (over 99 per cent), where negative votes were infinitesimal, in Abidjan, the capital, there were 101,690 votes for the Constitution and only 67 against. Elsewhere there were "yes" percentages of 99 per cent in Upper Volta, 97 per cent in Senegal, Dahomey, and the French Sudan, 93 per cent in Mauritania, and 76 per cent in Niger, subject to final rectification in all cases. In Dakar, capital of Senegal, there were 46,376 "yes" votes and 4,770 "no" votes.

In Guinea, on the other hand, the "no" percentage was 98 per cent and the "yes" percentage only two per cent, on the basis of incomplete returns.

French Equatorial Africa.

	"Yes"	"No"
Chad	23,187	198
Gaboon	137,650	11,736
Middle Congo	339,504	1,962
Ubangui-Shari	416,118	4,213

Results for the Middle Congo were complete, showing a "yes" vote of over 99 per cent. The figures for the three other territories were provisional, showing (on the basis of returns to hand) "yes" percentages of 98 in Ubangui-Shari, 97.8 in Chad, and 92 in Gaboon.

Madagascar, Somaliland, and Island Territories.

	"Yes"	"No"
Madagascar	1,178,595	332,924
French Somaliland ..	8,662	2,851
New Caledonia ..	26,085	500
Comoro Islands ..	48,127	904
St. Pierre and Miquelon	2,325	46

The Madagascan results (covering four-fifths of all polling-stations) showed an 80 per cent "yes" vote for the Constitution. Figures for New Caledonia and St.-Pierre-Miquelon were complete, and those for Somaliland and the Comoro Islands provisional.

The Fifth Republic came into existence on Oct. 6, when the new Constitution was promulgated in the *Journal Officiel*.
(Le Monde, Paris) **(Prev. rep. Constitution, 16529 A)**

A. LEBANON. — Disbanding of U.N. Observation Group. - Withdrawal of Lebanese Complaint against United Arab Republic.

The U.N. Secretary-General (Dr. Hammarskjöld) announced on Nov. 19 that the U.N. Observation Group in the Lebanon (Unogil) would be disbanded and withdrawn from the country following the restoration of normal conditions, in agreement with the Lebanese Government. The first group of 200 observers accordingly left Beirut on Nov. 22, and the remaining 300 had all left the country by Dec. 10. In its last report, published on Nov. 19, Unogil stated that the disturbances in Lebanon had come to an end with the formation of the new Government on Oct. 15, and that there had been no cases of established or suspected infiltration of armed men or *matériel* since that date.

Simultaneously with Dr. Hammarskjöld's announcement, the Lebanese Government requested the Security Council to delete from its agenda the Lebanese complaint—presented in May last—alleging intervention by the United Arab Republic in Lebanon's internal affairs; in asking the Council to take this action, the Lebanese Foreign Minister (M. Oweini) said that "close and cordial relations" had been restored between Lebanon and the U.A.R. on the basis of the U.N. Charter, the Charter of the Arab League, and the Arab "peace resolution" adopted by the General Assembly. In accordance with the Lebanese request, the Security Council unanimously agreed to delete the item from its agenda.—(New York Times - Le Monde) **(Prev. rep. 16439 A.)**

B. UNITED KINGDOM. — Immigration of Coloured People from Commonwealth.

During a parliamentary debate on Dec. 5, the Under-Secretary to the Home Office (Mr. David Renton) said that the total number of coloured people from the Commonwealth living in Britain was estimated at 210,000, including 115,000 West Indians, 55,000 Indians and Pakistanis, 25,000 West Africans, and 15,000 from other parts of the Commonwealth. London had 90,000 coloured residents, Birmingham 25,000, Manchester 8,000, Liverpool 6,400, and Leeds 6,000, with "smaller but substantial" numbers in Nottingham, Bradford, Coventry, and Cardiff.

It was announced on Dec. 7 that the British Caribbean Welfare Service (see 15451 A) had been renamed the Migrant Services Division of the U.K. Office of the West Indies, British Guiana and British Honduras. With the change of title the service acquired the status of a department of the West Indies Government.—(Times) **(Prev. rep. 16428 A; 15451 A.)**

C. SHIPPING. — World Tonnage, June 1958.

Statistical tables published by Lloyd's Register of Shipping in November gave the total of world shipping at June 30, 1958, as 118,033,731 gross tons, compared with 110,246,081 gross tons at June 30, 1957. The sizes of the principal national fleets (excluding ships under 100 tons, sailing ships, and barges) in mid-1958 and mid-1957 are shown in the following table:

	1958 Gross Tons	1957 Gross Tons
United States*	25,589,596	25,910,855
United Kingdom	20,285,776	19,857,491
Liberia	10,078,778	7,466,429
Norway	9,384,830	8,488,164
Japan	5,465,442	4,415,070
Italy	4,899,640	4,551,956
Netherlands	4,599,788	4,335,356
British Commonwealth (except U.K.)	4,369,349†	4,174,463
Panama	4,357,800	4,129,029
France	4,337,935	4,009,783
Germany (Western)	4,077,475	3,605,687
Sweden	3,303,078	3,047,535
Soviet Union	2,965,819	2,708,607
Denmark	2,034,687	1,857,478
Greece	1,611,119	1,471,543
Spain	1,607,212	1,505,224
Argentina	1,028,585	1,038,559
Brazil	911,167	891,480
Finland	755,180	754,720
Belgium	601,441	579,432
Turkey	595,625	593,505
Portugal	551,926	547,037
China (Nationalist)	539,830	541,690
Costa Rica	510,307	519,341

* Including reserve fleet, estimated at about 14,000,000 gross tons at June 30, 1958, and about 12,750,000 tons at June 30, 1957.

† Including 1,515,887 tons registered in Canada; 673,678 tons in India; 631,240 tons in Australia; 434,515 tons in Hong Kong; 255,989 tons in New Zealand; 194,032 tons in South Africa; and 128,263 tons in Pakistan.

Although the increase of about seven per cent in world tonnage since mid-1957 was widely distributed amongst the principal maritime nations (except the U.S.A., whose tonnage decreased by about 321,000 tons), the largest percentage expansion (34.9 per cent) was again shown by the Liberian "flag of convenience." A large increase (23.7 per cent) was also recorded for Japan, whose fleet had almost reached the 1939 record level of 5,629,845 tons.

Of world tonnage of all types, 39.3 per cent were motorships and 53.8 per cent oil-burning steamers, making a total of 93.1 per cent using oil fuel. The tonnage of coal-burning steamers fell during the year to 8,198,000 tons.

Of the total world tonnage, the biggest group again consisted of ships of 6,000-8,000 tons, but a large percentage of these (including the U.S. reserve fleet) were out of commission. Of ships built since the war, by far the greatest amount of tonnage fell in the 10,000-15,000 tons group, 74 per cent of these ships being oil tankers. Of ships under five years old, oil tankers accounted for 87 per cent of those over 15,000 gross tons, 90 per cent of those over 20,000 tons, and 84.9 per cent of those over 25,000 tons.

Among the principal maritime nations, Liberia had the largest proportion of modern tonnage, with 48.8 per cent under five years old, followed by Western Germany (41.2 per cent), Norway (39.6 per cent), Denmark (37.6 per cent), Japan (36.5 per cent), Netherlands 32.3 per cent), Sweden (31.7 per cent), France (28.3 per cent), the United Kingdom (24.6 per cent), and Greece and Italy (each 23.8 per cent). Only 3.6 per cent of tonnage registered in the United States was under five years old.

The world tanker fleet at June 30, 1958, numbered 4,028 ships of 33,590,140 gross tons, or 11.3 per cent of the total number of ships and 28.5 per cent of total world tonnage. The largest tanker fleets were owned by the United Kingdom (5,928,566 tons), Liberia (5,618,733 tons), Norway (5,353,613 tons), the U.S.A. (4,109,431 tons), Panama (2,323,713 tons), France (1,566,554 tons), Italy (1,497,534 tons), the Netherlands (1,186,099 tons), Sweden (1,080,662 tons), Denmark (685,651 tons), and Western Germany (421,037 tons).

Lloyd's Register gave the number of ships recorded as lost during 1957 as 163, totalling 270,963 gross tons, or 0.25 per cent of world tonnage. In addition, 341 ships aggregating 729,939 tons were broken up during the year.
(Lloyd's Register of Shipping) **(Prev. rep. 15989 A.)**

D. AVIATION. — Moscow-Cairo Air Service.

A regular air service between Moscow and Cairo was inaugurated on Dec. 5, when a TU-104 jet airliner of the Soviet *Aeroflot* company left Moscow for the capital of the U.A.R.
(Soviet Embassy Press Department, London) **(16324 B.)**

A. RHODESIA AND NYASALAND FEDERATION. — Federal General Election. - Victory for United Federal Party. - New Cabinet formed by Sir Roy Welensky.

At the general election for the second Rhodesian Federal Parliament, held on Nov. 12, Sir Roy Welensky's United Federal Party was returned to power with an overall majority of 33. Of the 59 seats in the new enlarged House, 53 were contested—the U.F.P. winning 44 (including five unopposed returns), the Dominion Party (led by Mr. Winston Field) eight, and Independents one. The six uncontested seats were filled by two European members specially appointed to represent African interests, and four specially-elected African members.

No seats were secured by the Constitution Party (eight candidates, including Dr. A. Scott, who was defeated at Lusaka East), or by the Confederate Party (one candidate). Of about 84,000 registered voters (96 per cent of whom were white), 64,560 went to the polls—an average of 72½ per cent. The votes cast for the different parties were as follows : United Federal Party, 37,145 ; Dominion Party, 22,630 ; Constitution Party, 2,340 ; Independents, 2,390 ; Confederate Party, 55. Neither the United Rhodesia Party nor the newly-formed left-wing Commonwealth Party contested any seats.

The distribution of seats in the new Federal Parliament was as follows :

	U.F.P.	D P.	Inde-pendent	Nomi-nated
Nyasaland :				
European elected members	3	—	—	—
European unopposed members	3	—	—	—
African unopposed members	2	—	—	—
African specially-elected members ..	—	—	—	2
European nominated member ..	—	—	—	1
Northern Rhodesia :				
European elected members	12	1	1	—
African elected members	2	—	—	—
African specially-elected members ..	—	—	—	2
European nominated member ..	—	—	—	1
Southern Rhodesia :				
European elected members	18	6	—	—
European specially-elected member ..	1	—	—	—
African elected members	3	1	—	—
	44	8	1	6

The U.F.P.'s total is in effect 46, due to the support of the two specially-elected African members for Nyasaland. The two specially nominated European members, and the European specially-elected member for Southern Rhodesia, have responsibility for representing African interests (see below).

As a result of the Constitution Amendment Act (see 15878 A), which authorized the enlargement of the Federal Parliament from 39 to 59 members, the original constituencies of the three territories were sub-divided so as to allocate 10 additional seats to Southern Rhodesia, six to Northern Rhodesia, and two to Nyasaland (see 15781 A). In the case of Nyasaland, the Federal Delimitation Commission (see 16149 A) divided the Protectorate into six general electoral areas and two special electoral districts ; in order to broaden the electorate taking part in appointing the two specially-elected African members, the Governor (Sir Robert Armitage) included in the electoral body those Nyasaland Africans who had " demonstrated their civic responsibility " by registering as Federal voters either on the special or general rolls.

When the electoral rolls were closed on July 31, the numbers of registered ordinary voters were as follows (corresponding figures at the first Federal general election in parentheses) : Northern Rhodesia, 20,452 (15,477) ; Southern Rhodesia, 65,092 (50,474) ; Nyasaland, 2,500 (1,058). Enrolment on the special rolls which provided the voters for the African candidates (and, in the case of Southern Rhodesia, for the specially-elected European Member for African Interests) was extremely low : in Southern Rhodesia 804 special voters registered for the special roll, of whom 642 were Africans, but in Northern Rhodesia and Nyasaland only 53 and seven Africans respectively enrolled. [It had been estimated at the beginning of 1958 that there were 29,000 Africans qualified for inclusion in the special rolls, of whom about 18,000 were in Northern Rhodesia and about 7,000 in Nyasaland.]

The Governor of Northern Rhodesia (Sir Arthur Benson) had ruled in October that the African Representative Council as at present constituted (with 34 members) could not adequately represent " nearly 2,000,000 African people " and should not therefore be responsible for the nomination of the territory's two African specially-elected Members. The Acting Secretary for Native Affairs (Mr. G. S. Jones) accordingly announced that this responsibility would be delegated jointly to all the members of the African Provincial Councils, the 19 members of the Superior Native Authority of Barotseland, and all those Africans whose names appeared on either the general or special voters' rolls ; all these would " constitute a body of more than 250 people—in the Governor's view a more appropriate number than the present size of the African Representative Council."

The Federal Prime Minister (Sir Roy Welensky) and all the members of his former Cabinet (see 15236 E) were re-elected to Parliament. Election results of special interest are given below (majorities in parentheses) :

Nyasaland. Luchenza—Sir Malcolm Barrow (U.F.P.), former Deputy Prime Minister and Minister of Home Affairs (unopposed).

Northern Rhodesia. Broken Hill—Sir Roy Welensky (U.F.P.), former Premier (490) ; Lusaka Rural—Mr. G. F. M. Van Eeden (D.P.), (246) ; Lusaka West—Mr. J. Gaunt (Independent with D.P. support) (157) ; Ndola Town—Mr. F. S. Owen (U.F.P.), former Minister of Commerce and Industry (358).

Southern Rhodesia. Bulawayo—Mr. D. MacIntyre (U.F.P.), former Minister of Finance (1,001) ; Bulawayo Suburbs—Mr. W. H. Eastwood (U.F.P.), former Minister of Transport and Works (888) ; Darwin—Mr. J. M. Caldicott (U.F.P.), former Minister of Agriculture, Health and Public Service (732) ; Gwanda—Mr. I. D. Smith (U.F.P.), (126) ; Midlands—Mr. R. Williamson (D.P.), (351) ; Mrewa—Mr. W. J. Field (Dominion Party leader), (422) ; Salisbury West—Mrs. M. Rosin (U.F.P.), (674) ; Umgusa—Mr. J. M. Greenfield (U.F.P.), former Minister of Law and Education (741) ; Umtali Town—Mr. B. D. Goldberg (U.F.P.), former Parliamentary Secretary for Home Affairs (615) ; Western—Mr. R. F. Halsted (U.F P.), (224).

African Seats.

The following Africans were elected :

Nyasaland : North—Mr. J. G. C. Chingattie (U.F.P.) (unopposed) ; South—Mr. C. J. Matinga (U.F.P.), (unopposed). **Northern Rhodesia :** Kafue—Mr. J. J. Simukondah (U.F.P.), (701) ; Luangwa—Mr G. A. M. Lewanika (U.F.P.), (3,104). **Southern Rhodesia :** Angwa-Sabi—Mr. J. Z. Savanhu (U.F.P.), (3,053) ; Gwaai—Mr. M. M. Hove (U.F.P.), (4,437) ; Harari—Mr. C. M. Chipunza (U.F.P.), (6,163) ; Lundi—Mr. I. H. Samuriwo (D.P.), (190).

Mr. Savanhu and Mr. Hove are both former African members ; Mr. Isaac Samuriwo becomes the first African to sit in the Federal Parliament as a representative of the Dominion Party elected by voters of all races.

The four specially-elected African members (i.e. Africans elected by members of the African Representative Councils except in the case of Northern Rhodesia, where special arrangements were made—see above) were : Nyasaland—Mr. M. S. Malunga and Mr. M. J. Mzembe ; Northern Rhodesia—Mr. D. Yamba and Mr. F. B. Chembi.

European Members for African Interests.

The European members specially nominated to represent African interests were Sir John Moffat (Northern Rhodesia), chairman of the African Affairs Board, and the Rev. Johannes Lodewicus Pretorious (Nyasaland), a minister of the Dutch Reformed Church. In Southern Rhodesia the European member for African interests, Mr. H. E. Davies, was not nominated but specially elected ; Mr. Davies polled 25,359 votes against 14,876 for Mr. H. A. H. Robinson (formerly of the Dominion Party), who stood as an Independent.

The principal issue on which the general election was fought was that of racial amity, the electors' choice having lain between the " racial partnership " principle of the United Federal Party and that of taking a " firmer line " with the Africans, as advocated by the Dominion Party. Minor election issues included the Government's proposals for constitutional change in Northern Rhodesia (which were opposed by both the U.F.P. and the D.P.), and the Federal Government's proposal to take over from South African Railways the 600-mile line through Bechuanaland linking the Federation with the Union of South Africa.

In a post-election statement on Nov. 13 Sir Roy Welensky said that he intended to continue his party's policies of the past five years, " which have aimed at the balanced development of all races [and] have already gained a very large measure of success." He regarded the election result as a " clear indication by the voters of the Federation that they wish to see our progress towards early independence secured beyond doubt." Between now and the 1960 conferences he anticipated " greater pressure " and " more vehement opposition " from those who did not favour independence, but this would in no way deter him ; any attempt " to get us to bargain away the standards we have set in return for political appeasement " would be countered " with every legitimate means." Sir Roy added that future prosperity would be built upon a foundation of " racial peace, and a climate in which the confidence of investors can be maintained."

New Federal Cabinet.

Sir Roy Welensky announced the composition of his new U.F.P. Cabinet on Dec. 8, its main features being (*a*) the creation of a Ministry of Economic Affairs ; (*b*) the appointment of a Minister for Information Services ; (*c*) the separation of the portfolio of Health and Education from that of Agriculture ; and (*d*) the adoption of the British practice of not including all Ministers in the Cabinet. The ministerial list was as follows :

*Sir Roy Welensky	Prime Minister, External Affairs, and Defence.
*Sir Malcolm Barrow	Home Affairs and Power.
Mr. J. M. Caldicott	Economic Affairs and Public Service.
*Mr. D. M MacIntyre	Finance.
*Mr. F. S. Owen	Commerce and Industry, and Posts.
*Mr. W. H. Eastwood	Transport.
†Mr. B. D. Goldberg	Health and Education.
†Mr. J. C. Graylin	Agriculture.
‡Mr. G. W. R. L'Ange	Works.
‡Mr. John Foot	Information.

* No change. † New Minister. ‡ Not a member of the Cabinet.

All the former Ministers were included in the new Cabinet. Prior to his appointment to the new Ministry of Economic Affairs, Mr. Caldicott had held the portfolios both of Health and Education and of Agriculture. Mr. Goldberg, the new Minister of Health and Education, was formerly Parliamentary Secretary for Home Affairs—a post now filled by Mr. Foot. Mr. Graylin, a lawyer, was elected for the Northern Rhodesian constituency of Livingstone. Neither Mr. L'Ange nor Mr. Foot will hold Cabinet rank, though they will attend Cabinet meetings when their particular responsibilities are under discussion. (Federal Information Department, Salisbury) **(Prev. rep. 16425 A ; 16244 A ; 16165 A ; 16149 A ; Cabinet, 15236 E.)**

A. ASTRONOMY. — Britain purchases Two Radio Telescopes from Holland.

The U.K. Ministry of Supply announced on Dec. 8 that two radio telescopes would be built by a Dutch firm for the Ministry, to be used in conjunction with the radio telescope at Jodrell Bank. The telescopes would weigh 250 tons each, would be ready by 1960, and would be installed at the Royal Radar Establishment, Malvern, for research in radio astronomy, upper-atmosphere phenomena, and observation of artificial satellites. A Ministry spokesman explained that the order had been placed in Holland because " these two radio telescopes are developments of existing Dutch products ; there are no corresponding British products which would give the same results."

The Science Correspondent of *The Times* commented : " The two radio-telescopes ordered from Holland are to be used as components in a single instrument which will be the most ambitious of its kind yet built. One of its uses will be to enable the position of the satellites to be followed more accurately than is possible with the big Jodrell Bank telescope. This does not mean that the new instrument will be better than Jodrell Bank—or those at the Mullard Radio Astronomy Observatory at Cambridge—but that it will be of a different type from either.

" The Jodrell Bank telescope has a single steerable reflector—the largest of its kind in the world. More accurate measurements of direction can, however, be got by combining the signals received in two different aerial systems. This approach has been carried to its farthest development at Cambridge. The two main instruments at Cambridge are again the biggest in the world of their own kind. But they are designed to work on specific wavelengths—1.7 metres and 7.9 metres, and can be used on no others.

" The scheme adopted for the Malvern telescope can be regarded as a combination of these two methods. In place of a single steerable telescope it will use two, one of which will be movable. Leiden Observatory has already in use a radio-telescope about as big as it is considered practicable for Malvern to mount on rails, as the proposed instrument will require. . . . Since the Dutch had already a suitable design, . . . it was the quickest solution to go to Holland for the mirrors to be used in the Malvern telescope."

The value of the order placed in Holland was not given, but a Ministry spokesman said that the figure of " several million guilders " quoted in an Amsterdam report was incorrect. (Times) **(Prev. rep. Radio Astronomy, 16352 C ; 15918 C ; Jodrell Bank, 15838 B)**

B. UNITED KINGDOM. — Atomic Energy. - Fourth Calder Hall Reactor in Operation.

The last of the four nuclear reactors at Calder Hall went into operation on Dec. 8, thereby marking the end of the programme of construction and installation which began in 1953. The Atomic Energy Authority stated that about three months of testing would be necessary before the reactor would generate electricity to be fed into the national grid.

The first two Calder Hall reactors (the " A " reactors) were opened in October 1956 and February 1957 respectively ; between them they have generated about 1,000 million units of electricity, of which 750 million units have been supplied to the national grid. The third was started early in 1958, but is at present working only as a producer of plutonium because of the accident of June 28 (see page 16501, first column). It is expected that the third and fourth (" B ") reactors will be producing electricity in March 1959. (Daily Telegraph) **(Prev. rep. 16499 A)**

C. UNITED KINGDOM. — Inquiry into Drunkenness.

The Home Secretary (Mr. R. A. Butler) informed the House of Commons on Nov. 13 that an inquiry into the continuing rise in drunkenness would be carried out by the social survey division of the Central Office of Information.

Home Office statistics published on the same day showed an 11.3 per cent increase in cases of drunkenness in England and Wales during 1957, especially among young persons ; the figure was the highest since 1938, and followed a similar increase of 11 per cent in 1956.

The number of offences for drunkenness in the three years up to and including 1957 was as follows :

	Males	Females	Total
1955	49,654	4,556	54,210
1956	55,573	4,609	60,182
1957	62,042	4,960	67,002

The increase in drunkenness among young persons during the same period was as follows, by age-groups :

	Under 18	Age 18-20	Age 21-29
1955	669	3,748	13,835
1956	933	4,452	14,955
1957	978	5,208	15,925

In the male age-group under 18 there were 928 cases of drunkenness in 1957, five more than in 1956 ; in the 18-20 male age-group the figure was 4,967, against 4,452 in 1956. Other male age-group totals for 1957 were : 21 to 29 years, 15,165 ; 30 to 59 years, 36,968 ; 60 and over, 4,004. For female age-groups the 1957 figures were : under 18 years, 49 ; 18 to 20 years, 241 ; 21 to 29 years, 760 ; 30 to 59 years, 3,133 ; 60 and over, 777.

The Home Office returns showed that the City of London (i.e. the " square mile " round the Mansion House) had by far the worst record for drunkenness in England and Wales, the figure being 398 83 per 10,000 population. It was pointed out in the Press, however, that whereas millions of people entered and left the City every day to and from their work, the City's resident population was only a few thousand (5,268 according to the 1951 Census) ; the *Manchester Guardian* commented that the figures for the City of London were thus " a reflection . . . of the fact that a great many work and drink there compared with the small number who live there." In the Metropolitan police district (Greater London) the figure was 42.41 per 10,000 population—one place below Manchester, where the figure was 45.15 per 10,000.

Outside the City of London the worst record for drunkenness was in Liverpool (81.43 per 10,000), followed by Salford (63.47) and Middlesbrough (62.57). The best record in England and Wales was that of Bristol (3.16 per 10,000), followed by Southport (3.98) and Norwich (4.03).

Among the counties, Durham had the worst record with 22.74 per 10,000 population, followed closely by Northumberland (22.08). The best record among the counties was held by Cambridgeshire (0.30 per 10,000), followed by East Sussex (1.37).

The C.O.I.'s survey will be made in selected areas ; the investigations will be carried out in co-operation with the local police forces and will cover all age-groups.

(Times - Daily Telegraph - Manchester Guardian)

D. UNITED STATES. — Foreign Aid Panel.

A nine-member committee was appointed by President Eisenhower on Nov. 24 to make an independent and non-partisan " critical appraisal " of U.S. expenditures abroad for military assistance and economic aid, and to present a preliminary report by March 1, 1959.

The committee was headed by Mr. William H. Draper, chairman of the Mexican Light and Power Company in Mexico City, and a former Under-Secretary of the Army. Its other members were : General Alfred M. Gruenther, president of the American Red Cross and formerly Supreme Commander of NATO ; Admiral Arthur W. Radford, former chairman of the Joint Chiefs of Staff ; General Joseph T. McNarney, a director of the General Dynamics Corporation, formerly Commander of U.S. Forces in Europe ; Mr. John J. McCloy, chairman of the Chase Manhattan Bank, formerly Under-Secretary of War and U S. High Commissioner in Germany ; Mr. Marx Leva, a Washington lawyer, formerly Assistant Secretary of Defence ; Mr. Dillon Anderson, a Houston lawyer, formerly Assistant to the President for National Security Affairs ; Mr. James E. Webb, a director of Kerr McGee Oil Industries Inc., formerly Under-Secretary of State and Director of the Budget ; Mr. George C. McGhee, president of the McGhee Production Company (Dallas) and a former State Department official ; and Mr. Tracy Voorhees, a New York lawyer, former Under-Secretary of the Army and lately director of the U.S. Programme for Resettlement of Hungarian Refugees. Professor George A. Lincoln, of the U.S. Military Academy at West Point, was designated " study co-ordinator " for the committee.

Messrs. Anderson, Leva, McGhee and Webb were identified in the White House announcement as Democrats, and Messrs. Draper, McCloy and Voorhees as Republicans. No party designations were listed for the ex-military members.

In announcing the formation of this committee, the President said that it was " appropriate, after some eight years of mutual defence effort, to evaluate the results to date and to recommend the most suitable means whereby the free world's defence may be ensured."—(New York Times) **(Prev. rep. 16246 B.)**

A. UNITED KINGDOM. — Legislation on Divorce and Matrimonial Matters. - Report of Royal Commission on Marriage and Divorce. - Divorce Statistics.

Five Bills dealing with matters relating to marriage and divorce were enacted in the summer of 1958, three of which were introduced by private members and two by the Government. With one exception, all the Bills were intended to give effect to various recommendations of the Royal Commission on Marriage and Divorce, which had been appointed in 1951 (see 11691 A) and which presented its report on March 20, 1956.

Report of Royal Commission.

All the members of the Royal Commission were unanimous in recommending three new grounds for divorce—wilful refusal to consummate marriage, artificial insemination by a donor without the husband's consent, and detention of one partner in an institution as a mental defective of violent propensities; they were deeply divided, however, on the principle of dissolution of a marriage which had broken down completely, nine being in favour and nine opposed to it.

The report was signed by Lord Morton of Henryton, a Lord of Appeal and chairman of the Royal Commission; Viscountess Portal, widow of the late Marshal of the R.A.F. Viscount Portal; Lord Keith of Avonholm, a Lord of Appeal; Lord Walker, a Senator of the College of Justice in Scotland; Sir Edward Holroyd Pearce, Justice of the High Court; Sir Walter Russell Brain, the neurologist; Sir Frederick Burrows, a former President of the National Union of Railwaymen and onetime Governor of Bengal; Lady Bragg, wife of Sir Lawrence Bragg, the physicist; Mr. H. L. O. Flecker, Headmaster of Christ's Hospital; Mr. Thomas Young, an Edinburgh solicitor; Mrs. Jones-Roberts, member of the Advisory Council on Child Care; Mr. H. H. Maddocks, a Metropolitan magistrate; Mrs. Margaret Allen, former president of the Labour Women's Congress; Dr. May Baird, chairman of the North-East Regional Hospitals Board; Mr. Robert Beloe, Chief Education Officer for Surrey; Mrs. E. M. Brace, a former mayor of East Ham; Mr. G. C. P. Brown, a headmaster; Mr. F. G. Lawrence, a barrister; and Mr. D. H. Mace, a Liverpool solicitor.

Two of the original members of the Commission (Dr. Violet Roberton and Mr. D. Hopkin) died before the report was completed, while a third (Mrs. Ridealgh) resigned. Two members subsequently appointed to the Commission also died—Mrs. Allen, who died shortly after signing the report, and Sir Wilfrid Bennett.

The report of the Royal Commission is summarized below under cross-headings:

Introduction. The report emphasized that by the law of England and Scotland marriage was the voluntary union for life of one man and one woman, although the State had recognized that in certain circumstances it would be contrary to public policy and would inflict hardship if the marriage could not be dissolved. It was disquieting, however, that for so long after the war the divorce rate had remained so high; the number of decrees made absolute in 1954 was 27,471 in England and Wales and 2,200 in Scotland, compared with 4,735 and 637 in 1937. Allowing for the fact that the "Herbert Act" of 1937 had introduced additional grounds for divorce, and for the provision of legal aid, the Commission were still satisfied that marriages were breaking up which in the past would have held together.

Among the factors which might contribute to the breakdown of marriages (the report suggested) were the increased possibilities of friction caused by the complexity of modern life; scarcity of houses; the fact that people were marrying at an earlier age; the greater demands now made on marriage through the spread of education, higher living standards, and the social and economic emancipation of women; the weakening of former restraints, such as social penalties on sexual relations outside marriage; and the wider spread of sexual knowledge, which might have "produced in the popular mind an undue emphasis on the overriding importance of a satisfactory sex relationship without a similar emphasis on the other stable and enduring factors of a lasting marriage." At the root of the problem, the Commission suggested, was "a tendency to take the duties and responsibilities of marriage less seriously than formerly," leading to "an increasing disposition to regard divorce, not as the last resort, but as the obvious way out when things begin to go wrong." Unless this was checked, there was real danger that the conception of marriage as the life-long union of one man with one woman might be abandoned.

The Commission did not believe that the remedy for marriage failure lay in making divorce more difficult. It stated in this connexion: "We are convinced that the real remedy for the present situation lies in other directions; in fostering in the individual the will to do his duty by the community; in strengthening his resolution to make marriage a union for life; in inculcating a proper sense of his responsibility towards his children. These objectives can only be achieved by education in the widest sense, by specific instruction before marriage, and by providing facilities for guidance after marriage and for conciliation if breakdown threatens. . . ."

The Grounds of Divorce. All the members of the Commission except Lord Walker agreed that the present law of divorce based on the doctrine of the matrimonial offence should be retained. Nine members (Lord Morton, Mr. Beloe, Lady Bragg, Sir Russell Brain, Sir Frederick Burrows, Mr. Flecker, Mr. Lawrence, Mr. Mace, and Sir Edward Pearce) were opposed to the introduction of the principle that a marriage should be dissolved if it had irretrievably broken down, as exemplified by divorce by consent, divorce at the option of either spouse after a period of separation, or divorce on a comprehensive ground of breakdown of marriage. The introduction of this principle, they maintained, would make divorce more widespread by encouraging people to "abandon their marriages on the flimsiest provocation," thereby multiplying the suffering of children and fostering "a change in the attitude to marriage which would be disastrous for the nation."

The other members of the Commission, with the exception of Lord Walker, considered that there should be provision for divorce in cases where, quite apart from the commission of a matrimonial offence, the marriage had broken down completely. Where husband and wife had lived apart for at least seven years, it should be possible for either spouse to obtain a decree dissolving the marriage, provided the other spouse did not object. Four of the members (Dr Baird, Mr. Brown, Mrs. Jones-Roberts, and Lord Keith) also proposed that either spouse should be able to obtain a dissolution on this ground, notwithstanding the other spouse's objection, if he or she could satisfy the court that the separation was in part due to the other's unreasonable conduct. "By basing dissolution of marriage on a complete breakdown of the union," the members of this group commented, "we are, we think, heightening the respect for true marriage. Our proposal avoids the distasteful expedient of committing a matrimonial offence, lessens undesirable publicity, and dispenses with the often unwarrantable assumption that one is more to blame than the other."

Other Suggested New Grounds of Divorce. (*a*) *Wilful Refusal to Consummate.* Under the Matrimonial Causes Act, 1950, a marriage was voidable on the ground of the respondent's wilful refusal to consummate; there was no corresponding provision in Scottish law. The Commission recommended that such wilful refusal should be made a ground of divorce, and not of nullity, in both England and Scotland, and that the presentation of a petition on this ground should be made an exception to the restriction, in England, on the presentation of petitions for divorce in the first three years of marriage. Nullity, the report commented, should be granted for some defect or incapacity existing at the date of the marriage, wilful refusal, on the other hand, connoting capacity to consummate but unwillingness to do so, was something which happened after marriage and should therefore be a ground of divorce.

(*b*) *Artificial Insemination.* The Commission recommended that artificial insemination by a donor without the husband's consent should be a ground for divorce, as the wife was doing her husband a grave injury which, in its possible consequences, was as serious as that of adultery.

(*c*) *Detention as a Mental Defective.* The Commission recommended that either spouse should be able to apply for the dissolution of marriage on the ground that the other spouse was a mental defective who, by reason of his or her dangerous or violent propensities, had been detained in an institution for a continuous period of at least five years immediately preceding the application, and whose recovery was highly improbable.

The Commission rejected the following new grounds for divorce suggested to them: wilful and persistent refusal of sexual intercourse; wilful refusal to have a child; cruelty to a child of either spouse; the commission of a sexual offence against a child of either spouse; lesbianism; incompatibility of temperament; a long term of imprisonment; and conviction for murder.

Suggested Alterations of Present Grounds of Divorce. (*a*) *Cruelty.* The Commission recommended that in proceedings for divorce founded on cruelty it should not be necessary for the applicant to prove that he or she needed protection, and that proof of past cruelty should in itself confer a right to divorce; they emphasized, however, that divorce on this ground should be granted only in respect of conduct which was really grave and weighty. A disease of the mind should no longer be a defence against a petition for divorce or judicial separation on the ground of cruelty.

(*b*) *Desertion.* To encourage husband and wife to come together for a short period to find out if a lasting reconciliation could be effected, there should be a new ground of divorce constituted by two periods of desertion, together amounting to at least three years, within a period of three years and one month before presentation of the petition. Proof of conduct of a grave and weighty nature, such that a spouse could not reasonably be expected to continue with the conjugal life, should in future raise an irrebuttable presumption that the other spouse intended to bring the married life to an end. [Both these recommendations were opposed by five members of the Commission, including Lord Morton, who expressed doubt whether the introduction of desertion as a ground of divorce in England had been a benefit to the community.]

The Commission also recommended that where husband and wife had separated before Oct. 1, 1937, in circumstances amounting to desertion on the part of one of them, the fact that they had agreed to live apart before then should no longer prevent the deserted spouse from bringing a petition for divorce on the ground of desertion.

(*c*) *Insanity.* It should still be necessary to prove that the respondent spouse was incurably of unsound mind and had been continuously under care and treatment for at least five years immediately before presentation of the petition; the definition of care and treatment, however, should be widened to cover treatment as a voluntary patient in a hospital or other institution.

Bars to Relief. (*a*) *Collusion.* The Commission recommended that collusion should be defined by statute in England and Wales, as it already was in Scotland. The spouses should be restrained from

conspiring to put forward a false case or to withhold a just defence, and divorce should not be available if one spouse had been bribed by the other to take divorce proceedings or had exacted a price for so doing. Reasonable agreements about financial arrangements, matrimonial property, and children, arrived at before the hearing, should not amount to collusion provided that such arrangements were disclosed to the court

(*b*) *Condonation.* It was suggested that an act or acts of sexual intercourse between husband and wife, after the commission of a matrimonial offence by one known to the other, should raise a presumption that the offence had been condoned. Fourteen members of the Commission recommended that where one spouse had committed adultery or had treated the other with cruelty, the husband and wife should be allowed a trial period not exceeding a month, during which they might come together in an attempt to effect a reconciliation; nothing ensuing during that period should be regarded as amounting to condonation of the previous offence. This suggestion was opposed by Lord Morton, Mrs. Allen, Dr. Baird, Sir Frederick Burrows, and Mr. Lawrence.

Nullity of Marriage. The fact that the parties had consented to the artificial insemination of the wife, with the seed of either the husband or a donor, should be a bar to proceedings by either spouse for nullity on the ground of impotence.

Judicial Separation. Desertion, insanity, or failure to comply with a decree for restitution of conjugal rights should no longer be grounds for judicial separation Eighteen members of the Commission recommended that artificial insemination by a donor without the husband's consent should be an additional ground of judicial separation, Lord Keith dissenting.

Marriage Guidance and Conciliation. The Commission recommended that a suitably qualified body should be set up at an early date to review the marriage law and the existing arrangements for premarital education and training. The State should give every encouragement to the existing agencies engaged in matrimonial conciliation, but should not define any formal pattern of conciliation agencies or set up an official conciliation service. Local authorities should be empowered to make contributions towards such agencies; any such expenditure approved by the appropriate Minister should rank for Exchequer grant to the extent of not less than 50 per cent.

Children of Divorced Parents. After pointing out that some 20,000 children under 16 were affected each year by the divorce of their parents, the Commission recommended that in every case of divorce, nullity, or judicial separation the court must be satisfied that the arrangements proposed for the care and upbringing of any children were the best which could be devised in the circumstances; until the court was so satisfied, the decree *nisi* should not be made absolute. Written statements should be submitted to the court on the proposed arrangements, and provision made for investigation and report by a court welfare officer in such cases as the court might direct. The present arrangement whereby in London there was a court welfare officer seconded from the probation service should be extended to each of the 42 towns in which matrimonial cases were tried, and the court's jurisdiction to make orders in respect of children in matrimonial proceedings should be extended to illegitimate, adopted, or other children living in the family at the time the home was broken up. The court should have power to require a local authority to receive a child into its care. Divorce cases tried in London in which children under 16 were affected should be placed in a special list of causes for hearing.

Damages and Costs. A wife should be given the same right to claim damages from an adulteress as her husband had to claim them from an adulterer; at the moment she could bring an action for enticement against the woman concerned, but the burden of proof upon her was heavy. The Commission considered that there was no justification for allowing a wife to retain her privileged position in matrimonial proceedings, whereby her costs were regarded as a matter for which the husband bore financial liability; in this connexion it cited a case in which a husband had had to pay his wife's costs although her allegations against him had proved unfounded. They therefore recommended that husband and wife should be treated on exactly the same footing in respect of liability for costs.

Maintenance. The Commission recommended (1) that a wife's remarriage should extinguish her right to claim maintenance from her former husband, and (2) that a husband should be able to apply for a maintenance order against his wife on the ground that he was unable to support himself, and that his wife had means more than reasonably sufficient for her own support. When one of the parties to a dissolved or annulled marriage died, the survivor should have the right to apply for provision out of the deceased's estate, and the court should be empowered to make an order.

Thirteen members of the Commission supported the recommendation that the court should continue to have power to order financial provision to be made for a guilty wife, and that the High Court should be given the same power in respect of a guilty husband. On the other hand, Lord Morton, Sir Frederick Burrows, Mrs. Jones-Roberts, Lord Keith, Lord Walker and Mr. Young considered it wrong in principle that a husband or wife should be required to support a guilty spouse.

The Commission considered that it would be inadvisable to introduce any system of attachment of wages for the enforcement of maintenance orders; with two dissenting votes, it recommended that committal to prison should not cancel the arrears of maintenance in respect of which the imprisonment was imposed.

Property Rights between Husband and Wife. The Commission (Sir Frederick Burrows dissenting) recommended (1) that if one spouse had left the other in the matrimonial home, he or she should not be able to turn out the other spouse, or take away any of the essential contents of the home without a court order; and (2) that the person to whom instalments under a mortgage or hire-purchase agreement were due should be bound to accept payment if tendered by the other spouse. Savings made from housekeeping money, or investments and purchases made with the savings, should ordinarily belong to husband and wife in equal shares.

Administration of the Law. The Commission recommended (1) that steps should be taken as soon as possible to enable all divorce cases to be tried by judges of the High Court, (2) that the period which must normally elapse before a spouse who had obtained a decree *nisi* could apply for it to be made absolute should be increased from six weeks to three months.

Marriage with Certain Relations. The report pointed out that the law prohibited marriage with certain relations by kindred or affinity, and that the prohibition which gave rise to most concern was that relating to marriage with a divorced wife's sister or husband's brother. The majority of the Commission (Lord Morton, Sir Frederick Burrows and Mr. Flecker dissenting) recommended that it should be permissible for a divorced person to marry during the lifetime of his or her former spouse any person whom he or she could lawfully marry at the present time if that former spouse were dead.

Legislation on Marriage and Divorce.

The Attorney-General (Sir Reginald Manningham-Buller) told the House of Commons on June 4, 1956, that although there was no prospect of early legislation to carry out the Commission's recommendations, the Lord Chancellor was considering those recommendations which could be effected by administrative action or by amendment to the rules of court. Lord Mancroft (then Under-Secretary, Home Office) stated on Oct. 24, 1956, that although no major change in the divorce laws would be undertaken by the Government, action would be taken on the Commission's recommendations for the protection of children, where this could be done without legislation.

Lord Mancroft said that the most important and by far the most controversial of the Commission's recommendations was the question of allowing divorce if the parties had been separated for seven years. The Commission were equally divided on this matter, and he suspected that it reflected a similar division of opinion in the country and probably in the House. That being so, few Governments would be ready to legislate without first allowing time for public opinion to crystallize and for Parliament to express its views. Legislation would be required (he continued) to enable a court to withhold a decree absolute until it was satisfied about the children's welfare, as the Commission had recommended, but he could not hold out much hope of legislation on these lines in the coming session; the Lord Chancellor, however, proposed to invite the Supreme Court Rules Committee to consider what other amendments to the rules of court were needed, and similar action was proposed in Scotland. Other less important recommendations were suitable for private members' Bills, which was the only way in which the form of the divorce law had been affected in the last 20 years.

The Commission's recommendation that the normal period between a decree *nisi* and a decree absolute should be extended to three months came into effect from April 30, 1957, under an order previously signed on March 14 by Lord Kilmuir (the Lord Chancellor) and Lord Merriman (president of the Probate, Divorce, and Admiralty Division of the High Court). The order permitted the court to fix a shorter period at its discretion. [The interval between the two decrees, which is designed to allow time for any necessary inquiries by the Queen's Proctor, was formerly six months but was reduced to six weeks in 1946.]

Four Bills dealing with marriage and divorce, all of which had been passed during the spring or early summer of 1958, were enacted on July 7, and a fifth on July 24. Three of these —the Divorce (Insanity and Desertion) Bill, the Matrimonial Proceedings (Children) Bill, and the Matrimonial Causes (Property and Maintenance) Bill—were private members' Bills designed to give effect to specific recommendations of the Royal Commission. The Maintenance Orders Bill, a Government measure, permitted the attachment of earnings to cover arrears of maintenance—a proposal which the Commission had considered inadvisable.

The Divorce (Insanity and Desertion) Bill, introduced by Mr. Deedes (C.), was enacted on July 24. It provided (*a*) that when a divorce was sought on the ground of incurable insanity, treatment as a voluntary patient in a hospital or other institution should be recognized as constituting care and treatment under the terms of the Matrimonial Causes Act, 1950; and (*b*) that when a divorce was sought on the ground of three years' desertion, the deserting spouse should be regarded as having retained the intention to desert even if he or she became insane during that period. [Under the existing law, a divorce could be granted only if the deserting spouse retained the intention throughout the period of desertion, and it could be held that insanity precluded the maintenance of that intention.]

The Matrimonial Proceedings (Children) Bill, introduced by Mr. Moyle (Lab.), provided (*a*) that no decree *nisi* should be made absolute until the court was satisfied that adequate arrangements had been made for the children's welfare; (*b*) that a court welfare service, recruited from the probation service, should be established to assist the judge by investigating the circumstances when he was faced with difficult decisions; (*c*) that the court should have power to commit a child to the care of a local authority; (*d*) that the court's power should extend to illegitimate, adopted, and other children living as part of the family.

The Matrimonial Causes (Property and Maintenance) Bill, introduced by Sir Hugh Lucas-Tooth (C.), provided (*a*) that the High Court might make an order for maintenance or alimony, not only on pronouncing a decree of divorce, nullity, or judicial separation, but at any later time; (*b*) that a wife who had applied for financial relief against her husband might ask the High Court to set aside a disposition of property made by him within the previous three years with the intention of defeating her claim; (*c*) that the court might not set aside a disposition made for valuable consideration to a person acting in good faith and without notice of the husband's intention; (*d*) that a divorced women might apply to the High Court for provision to be made for her out of her former husband's estate, if he had died without making reasonable provision for her; (*e*) that a divorced man would have the same right in respect of the estate of a former wife; (*f*) that where the respondent had parted with money or property of the applicant's, the High Court or county court might order him to pay an appropriate sum in respect of that money or property. The Act does not apply to Scotland or Northern Ireland.

The Maintenance Orders Bill provided (*a*) that where payments under a maintenance order were in arrears to the extent of four weekly payments, or two payments due at longer intervals, a court might make an order requiring the defaulter's employer to make deductions from his earnings and pay the money deducted to a court officer for transmission to the beneficiary; (*b*) that the maximum term of imprisonment for disobeying a maintenance order should be reduced from three months to six weeks; (*c*) that imprisonment should not wipe out arrears of maintenance; (*d*) that a man might not be committed more than once for the same arrears. The Act comes into effect on Feb. 16, 1959.

During the debate on the Bill, Government spokesmen pointed out that about 5,000 men were sent to prison every year for failure to meet their maintenance obligations.

The Marriage Acts Amendment Bill, introduced by Dr. Somerville Hastings (Lab.), ended the legal anomaly whereby an Anglican church could be used for marriages as soon as it was built and registered, whereas a Nonconformist chapel or Roman Catholic church could not be registered for marriages less than 12 months after first being used for worship. The Bill provided (1) that during the first year after a church or chapel had been built, marriages might be solemnized there in the presence of the registrar; and (2) that after a year an authorized person might be appointed to take the place of the registrar.

Mr. Butler (Home Secretary) announced on July 8 that he had set up an expert committee, under the chairmanship of Mr. Justice Arthian Davies, to advise him on certain proposals which had been made to codify and improve the existing law on separation and maintenance relating to matrimonial proceedings in magistrates' courts.—(Times - Daily Telegraph - Manchester Guardian) **(Prev. rep. 16109 A; 12360 B; 11691 A.)**

Divorce Statistics.

Divorce statistics for the seven years 1950 to 1957 inclusive are given in the following tables, contained in the Annual Abstract of Statistics for 1958 published by the Central Statistical Office:

England and Wales.*

	1950	1951	1952	1953	1954	1955	1956	1957

A. UNITED NATIONS.—Secretariat. - Appointment of New Under-Secretary for Special Political Affairs.

The appointment of Mr. Chakravarthi Narasimhan (India) as U.N. Under-Secretary for Special Political Affairs *vice* Sir Humphrey Trevelyan (Great Britain) was announced on Dec. 1 by the U.N. Secretary-General, Dr. Hammarskjold. Sir Humphrey Trevelyan had resigned the post a month earlier following his appointment as British Ambassador to Iraq.

Mr. Narasimhan had been executive secretary of the U.N. Economic Commission for Asia and the Far East (ECAFE) since 1956; prior to that year he was head of the economic affairs department of the Indian Ministry of Finance. He will take up his new appointment on January 26, 1959.
(U.N. Information Centre, London) **(16210 A; 15918 G.)**

B. BRITISH COMMONWEALTH. — Empire Day renamed Commonwealth Day.

The U.K. Prime Minister (Mr. Macmillan) informed the House of Commons on Dec. 18 that Empire Day (May 24) would be renamed Commonwealth Day with the concurrence of the other Commonwealth Governments and of the Empire Day Movement. (Times) **(Prev. rep. 16174 B.)**

C. VATICAN. — Papal Consistory.

The 23 newly-created cardinals were officially raised to the Sacred College at a secret consistory held by Pope John at the Vatican on Dec. 15. The Pope also announced a number of other Church appointments, including that of Cardinal Masella as *Camerlengo* (Chamberlain) of the Roman Catholic Church.
(Universe) **(Prev. rep. 16495 A.)**

DECEMBER 20—31, 1958

A. AUSTRALIA. — Government Victory in General Elections. - Liberal-Country Party Majorities in Senate and House of Representatives. - Mr. Menzies forms New Federal Government.

In the Australian general elections, held on Nov. 22, Mr. Menzies' Liberal and Country Party coalition government was returned to power with an increased majority in the House of Representatives and, for the first time for three years, with a majority in the Senate. Mr. Menzies not only won his fifth consecutive general election but also obtained his biggest majority in the House of Representatives since he first took office in 1949.

Elections to House of Representatives.

The major parties contesting the elections were the Liberals and the Country Party (the Government parties), who together presented 118 candidates; the Australian Labour Party (A.L.P.), which presented 121 candidates; and the Democratic Labour Party (D.L.P.), which nominated 96 candidates. The Queensland Labour Party put forward 17 candidates in Queensland, while there were also 20 Communist candidatures.

The Democratic Labour Party broke away from the A.L.P. in 1956 under the name of the Anti-Communist Labour Party (see 15024 A), and subsequently adopted its present designation. The Queensland Labour Party seceded from the A.L.P. in April last (see 15516 A).

The results of the election for the new House of Representatives (124 seats) were as follows, comparison being shown with the last (1955) general election:

	1958 elections			1955 elections		
	Seats	Votes	Per cent	Seats	Votes	Per cent
Liberals and Country Party	77	2,002,704	45	75	1,779,092	46.3
Australian Labour Party	47	1,912,222	42	48	1,758,392	45.8
Democratic Labour Party	-	408,830	9	—	214,468	5.6
Others	—	53,332	4	1	88,484	2.3

Notes.—(1) The Liberal Party has 58 members in the new House and the Country Party 19.

(2) The Australian Labour Party's total of 47 includes the two members returned respectively for the Australian Capital Territory (Canberra) and the Northern Territory. As these members only vote when matters affecting their constituencies are under discussion, the A.L.P.'s effective voting strength in the new House will thus be 45.

(3) Figures of votes and percentages for the 1958 elections (published in the Australian press on Nov. 24) are provisional, since they exclude seven constituencies where the results were in doubt at the time. It was pointed out, however, that the percentages would not be significantly altered by late results. Definitive voting figures will not be available until early in 1959.

(4) There was one Independent member in the former House, shown under "Others."

Candidates elected in the six States were as follows, showing also voting figures (provisional, with some late results outstanding) and percentages:

	Government parties: Liberals	Country Party	Votes and percentage	Australian Labour Party	Votes and percentage
New South Wales	16	8	731,568 (43.2)	22	797,367 (47.1)
Victoria	18	5	567,756 (43.8)	10	505,695 (39.0)
Queensland	10	5	289,161 (47.9)	3	227,632 (37.6)
South Australia	5	-	184,018 (43.7)	6	192,276 (45.7)
Western Australia	7	1	159,913 (51.2)	1	107,731 (34.5)
Tasmania	2	-	66,417 (42.6)	3	70,456 (45.2)

As stated above, the A.L.P. won the seats for the Australian Capital Territory and the Northern Territory.

The Democratic Labour Party polled 186,771 votes (14.4 per cent) in Victoria, its stronghold. In New South Wales the D.L.P. poll was 89,818 (5.3 per cent), in Queensland (65,259 (10.8 per cent), in Western Australia 30,829 (9.8 per cent), in South Australia 24,556 (5.8 per cent) and in Tasmania 11,597 (7.4 per cent). The Queensland Labour Party and the Communist Party polled negligibly.

The Government won four constituencies from the Australian Labour Party—two in Queensland (Griffith and Herbert) and two in Western Australia (Kalgoorlie and Stirling)—while the A.L.P. won three from the Government parties: St. George (New South Wales), Braddon (Tasmania) and Leichhardt (Queensland). The Liberal Party lost the Victorian constituencies of Indi and Wimmera to the Country Party, whilst the latter party won Moore (Western Australia) from the Liberals. All Ministers were re-elected except Sir Arthur Fadden and Sir Philip McBride, both of whom retired from political life before the election. Dr. Evatt, leader of the A.L.P., was re-elected with a big majority for Hunter (N.S.W.), polling 20,798 votes against 6,026 for his Liberal opponent and 4,872 for a D.L.P. candidate.

The electorate numbered over 5,400,000 (an increase of 600,000 since 1955), including 360,000 new settlers—240,000 from Britain and 120,000 from European countries. Voting was compulsory under penalty of a fine for abstention. Australians living abroad voted by post, over 6,000 postal ballots being registered at Australia House in London.

Senate Elections.

As a result of Government gains from Labour in Queensland and Western Australia, the Liberal-Country Party coalition will have 32 seats in the Senate and the Australian Labour Party 28 as from July 1, 1959—the Government's first working majority in the Upper House since 1955. In the former Senate the Government and the Opposition each held 30 seats, thus enabling the Opposition to hold up legislation which, though passed by the House of Representatives, could not get through the Senate for lack of a Government majority (a notable example was the banking legislation, which was twice rejected by the Senate though passed by the House of Representatives —see 16112 E, 16033 A).

Senators are elected for six years, one-half of the Senate coming up for re-election triennially; they are directly chosen by the people of the States they represent, voting as a single electorate under the proportional representation system. As senatorial elections are held every three years, 30 of the 60 Senate seats (five in each State) are normally contested. In the present elections, however, 32 Senate seats were at stake (of which six each were in Victoria and New South Wales) because of one retirement and one death.

Of the 30 Opposition seats in the former Senate, 27 were held by the Australian Labour Party and three by the Democratic and Queensland Labour parties; there are no D.L.P. or Q.L.P. members in the new Senate, though the D.L.P. contested the senatorial elections in every State.

Voting in the senatorial elections was as follows:

	Government parties	A.L.P.	D.L.P.	Others
New South Wales	587,254	644,493	69,290	99,263
Victoria	480,685	486,775	141,301	12,088
Queensland	256,184	233,195	60,292	8,177
South Australia	163,055	183,207	20,058	10,198
Western Australia	156,283	99,236	17,244	1,878
Tasmania	55,638	56,824	23,795	2,716
Total Australia	1,699,099	1,703,730	331,980	134,320

The Government's Electoral Programme.

The Government's electoral programme was outlined by Mr. Menzies in a speech on Oct. 29 in Kooyong, his Melbourne constituency.

Declaring that the Government would campaign on its record of achievement over the past nine years, Mr. Menzies said that the confidence of the outside world in Australia's stability and progress had been "eloquently proved" by the success of the loans recently raised in London and New York (see 16465 C). "We, as trustees," he added, "can point to a great estate, in good repair, amazingly developed, sensibly managed, and respected and trusted all round the world."

While making no specific promises of higher social service benefits if the Government were returned to power, Mr. Menzies pledged it to "seize every opportunity within the scope of the economy to expand social services and other measures to assist the family man." Specifically, he stated that the Government would (1) provide an extra £A.1,000,000 a year for oil prospecting, and make another £A.2,500,000 available for development in the north-west of Western Australia; (2) reintroduce the banking reform legislation rejected by the Senate in the previous Parliament; (3) reduce taxation wherever possible; (4) set up independent committees to advise the Government on taxation problems, the introduction of a decimal coinage, and the problems of the dairy industry; (5) provide aid for State Governments wishing to convert their railways to the standard gauge; (6) introduce legislation for uniform nation-wide marriage and divorce laws; (7) improve transport and highways; (8) convene a Premiers' Conference to discuss the resumption by the States of their taxing powers, as well as the whole pattern of Federal-State financial relations. In addition, there would be an intensified drive to expand trade and increase overseas earnings, and Australia would continue to press for international commodity agreements to achieve greater stability in world prices.

Attacking the Labour programme outlined by Dr. Evatt (see below), Mr. Menzies said that the cost of the A.L.P.'s social service "handouts" would be £A.165,000,000 and would "usher in an inflation immeasurably more severe than Australia has ever known." The basic difference between the Government and the Opposition, he added, was that the former "resolutely pursues the encouragement

of private enterprise" while Labour aimed to nationalize industry; moreover, the Government "concentrates on the development of resources, production, and trade, which alone can provide new social service benefits," while Labour "concentrates on handing out cash benefits."

In a separate foreign policy statement, Mr. Menzies said that the Government's dominant aim in this field was "to maintain friendly relations, to be good neighbours, and to have powerful friends," all of which required a close alignment with the Commonwealth and the United States. Australia would not recognize Communist China, as this would be regarded by the free South-East Asian countries as a victory for Communism and would create difficulties with the United States. The New Guinea question should be settled by the International Court of Justice if Indonesia's claim to Dutch New Guinea was based on alleged legal right; if Indonesia contemplated armed aggression in furtherance of her claim, it should be resisted by the United Nations. Australia would continue to co-operate with the Dutch authorities in developing the native population in New Guinea for ultimate self-government.

The leader of the Country Party (Mr. McEwen) issued a statement expressing full support for the Government's programme as outlined by Mr. Menzies, and endorsing it on behalf of the Country Party.

The Opposition's Electoral Programme.

The Leader of the Opposition, Dr. H. V. Evatt, outlined the electoral programme of the Australian Labour Party in a speech in Sydney on Oct. 15.

Dr. Evatt pledged the A.L.P. to introduce higher social service benefits and tax concessions costing about £A.120,000,000 a year. Specifically, the Labour Party would (1) increase child endowment payments to the extent of £A.58,500,000, including the virtual doubling of the present weekly payments; (2) double the maternity allowance for the first child, and raise the present allowances for subsequent children; (3) increase invalid and old-age pensions by 10s. a week to £4. 17s. 6d.; (4) increase widows' pensions by 15s; (5) raise service pensions for the totally incapacitated to the level of the basic wage (average £A13), (6) provide marriage loans; (7) introduce an active hire-purchase policy to force down excessive interest rates; (8) make travelling expenses to and from work allowable income-tax deductions; (9) restore cost-of-living adjustments to the basic wage; (10) support the principle of equal pay for women. The A.L.P. would also allow State and local governments to have the full proceeds of the petrol and diesel tax for road-building programmes.

In the field of defence, there would be a complete overhaul of Australia's defence administration in relation to national service training, based on voluntary service in peace-time. On the New Guinea question, Labour favoured a regional defence pact between Australia, the Netherlands and Indonesia.

Speaking in Melbourne on Oct. 21, Dr. Evatt offered to resign the leadership of the Australian Labour Party if the Democratic Labour Party would agree to give its second preference votes to the A.L.P. in the general election. [In the last Victorian State elections D.L.P. second preferences had brought about the defeat of several A.L.P. candidates and the return of a Liberal-Country Party State Government.] Dr. Evatt said that this offer—made "without reservation" and irrespective of the election result—was designed solely to restore unity to the Australian Labour movement. He added: "I did not seek the honour of being leader of the Federal Parliamentary Labour Party. I was elected to the party leadership in a ballot of 80 members. I have never sought my own preferment in the A.L.P. and I do not do so now. . . . The D.L.P. claims that my leadership is an obstacle. I am willing to remove the obstacle. The man who says I am a Communist or a Communist sympathizer is one of the greatest liars who have ever lived."

An earlier offer by Dr. Evatt to relinquish the party leadership in the cause of Labour unity met with no success when it was made in April last. A D.L.P. conference in May decided against exchanging preferences with the A.L.P. at the next general election.

Dr. Evatt's Controversy with Roman Catholic Archbishop of Melbourne.

A controversy arose on the eve of the election between Dr. Evatt and the 94-year-old Roman Catholic Archbishop of Melbourne, Dr. Daniel Mannix, who is a supporter of the Democratic Labour Party.

Cardinal Gilroy (Roman Catholic Archbishop of Sydney, and head of the Roman Catholic Hierarchy in Australia) had declared a week before the election that Christians were free to support any political party in Australia except the Communist Party. On Nov. 20 Dr. Mannix issued a statement accusing the Labour Party of trying to shelter under Cardinal Gilroy's name in advertisements published throughout Australia and in pamphlets distributed to congregations outside Roman Catholic churches. He added: "Every Communist and Communist sympathizer in Australia wants a victory for the Evatt party. . . . It should be a significant warning for every Catholic and every decent Australian." In reply, Dr. Evatt issued a statement on Nov. 21 emphasizing that the A.L.P. was opposed to Communism without reservation and was "essentially a Christian movement"; while expressing admiration and respect for Dr. Mannix as a "crusader for freedom," he (Dr. Evatt) deplored his "open entry into the field of party-political activity."

In a post-election statement on Nov. 23, Dr. Evatt described Dr. Mannix's statement of Nov. 20 as a "slander directed against the Labour Party," a "deliberately timed bomb," and "an illustration of the Menzies-Mannix axis in operation." Pointing out that Mr. Calwell (deputy leader of the A.L.P. in the House of Representatives) and Senator McKenna (Opposition leader in the Senate) were both practising Catholics, he said that they both agreed with him that Dr. Mannix's views on party politics were "governed by his active sponsorship of and patronage of the Santa Maria movement" [a Roman Catholic organization which has recently identified itself with the aims of the Democratic Labour Party.]

Dr. Evatt went on to assert that the aims of the Santa Maria movement were identical with those of Mr. Menzies, whom he accused of introducing into Australian politics "a force on the pattern of European totalitarian politics." After saying that many European immigrants resented the introduction of "ecclesiastical interference" in free elections, Dr. Evatt added that Catholic leaders like the "kindly, gentle, charitable Cardinal Gilroy have frowned upon these un-Australian methods and have insisted on the right of the people to give a free vote at the polls in favour of the great Australian labour movement." In conclusion, Dr. Evatt said that "in spite of the gratuitous insult and false defamation of the supporters of Labour as Communists and Communist sympathizers, a large number of Australians have hurled the insult back in the faces of the Government, the Democratic Labour Party, and its sponsors."

The Roman Catholic Archbishop of Hobart (Dr. Young) and eight other Catholic bishops issued a statement the same evening criticizing Dr. Evatt for what was described as "a wild attack on Archbishop Mannix, who is admired inside and outside Australia for his courageous defence of justice and freedom for more than 40 years." Dr. Young added: "People are getting tired of cries of 'conspiracy' whenever someone in this free democracy does or says something that isn't pleasing to Dr. Evatt. Before it was the Petrov Royal Commission. Now it is the forthright Catholic Archbishop, who has every right to talk to his people about matters of conscience . . ."

New Federal Government.

The new Federal Government was announced by Mr. Menzies on Dec. 8, comprising 12 Ministers of Cabinet rank and 10 Ministers who are not members of the Cabinet—an innovation in Australian political life Its membership was as follows:

Cabinet Ministers.

*Mr. Robert G. Menzies ..	Prime Minister.
*Mr. John McEwen .. .	Trade.
†Mr. Harold Edward Holt .	Treasurer.
*Mr. Richard G. Casey .	External Affairs, and in charge of the Commonwealth Scientific and Industrial Research Organization.
*Senator W. H. Spooner .	Vice-President of the Executive Council, and Minister for National Development.
†Mr. Athol Gordon Townley ..	Defence.
*Mr. Paul Hasluck .. .	Territories.
†Mr. William McMahon .	Labour and National Service.
*Senator S. D. Paltridge ..	Shipping and Transport, and Civil Aviation.
*Mr. Charles W. Davidson .	Postmaster-General.
*Mr. A. R. Downer ..	Immigration.
Sir Garfield Barwick, Q.C. ..	Attorney-General.

Non-Cabinet Ministers.

*Senator W. J. Cooper ..	Repatriation.
*Dr. D. A. Cameron . .	Health.
*Mr. J. O. Cramer . ..	Army.
*Mr. F. M. Osborne .. .	Air.
*Mr. H. S. Roberton ..	Social Services.
*Senator N. H. D. Henty ..	Customs and Excise.
Mr. Charles F. Adermann ..	Primary Industry.
Mr. Allan Shallcross Hulme..	Supply.
Mr. Gordon Freeth	Interior and Works.
Senator John Grey Gorton ..	Navy.

* No change. † Held different portfolio in previous Government.

The principal changes as compared with Mr. Menzies' former administration were: (1) Mr. Harold Holt, deputy leader of the Liberal Party, became Federal Treasurer in succession to Sir Arthur Fadden, who retired from political life at the dissolution of the former Parliament (see 16090 C); (2) Mr. A. G. Townley, previously Minister of Supply, became Minister of Defence *vice* Sir Philip McBride, who also retired from politics before the general election after holding the Defence portfolio since 1950; (3) Sir Garfield Barwick, one of the five new Ministers (see below), became Attorney-General *vice* Senator O'Sullivan, who had been Government leader in the Senate

since 1949 and had expressed the wish to retire from the Ministry ; (4) Mr. McMahon, previously Minister for Primary Industry, became Minister of Labour and National Service *vice* Mr. Henry Holt, who had held these portfolios since Mr. Menzies was first returned to office in 1949 ; (5) five new Ministers entered the Government—Sir Garfield Barwick, Mr. Adermann, Mr. Hulme, Mr. Freeth and Senator Gorton.

Sir Garfield Barwick (Liberal) is one of Australia's leading lawyers and was president of the Law Council of Australia in 1952-54 ; he was elected to the Federal House of Representatives for Parramatta (N.S.W.) at a by-election in March last—see 16099 B. As shown above, he is a member of the Cabinet, whereas the other new Ministers are not of Cabinet rank.

Mr. Charles Adermann (Country Party) has represented Maranoa (Queensland) since 1943, and was formerly chairman of the Queensland Peanut Marketing Board. He succeeded Mr. MacMahon as Minister for Primary Industry.

Mr. Allan Hulme (Liberal) has represented Petrie (Queensland) since 1949. A chartered accountant, he has been chairman of the Commonwealth Immigration Planning Council since 1956. He succeeded Mr. Townley as Minister of Supply.

Mr. Gordon Freeth (Liberal) has represented Forrest (Western Australia) since 1949. He is a lawyer by profession, and rowed for Australia in the British Empire Games in 1938. He succeeded Mr. Allan Fairhall as Minister of the Interior and Works.

Senator John Gorton (Liberal) took over the Navy portfolio from Mr. Davidson, who formerly combined it with that of Postmaster-General. He has been a senator for Victoria since 1949. A graduate of Brasenose College, Oxford, he served as a pilot in the R.A.A.F. during the Second World War.

Among leading Ministers to retain their former portfolios were Mr. John McEwen (Deputy Prime Minister), who succeeded Sir Arthur Fadden as Leader of the Country Party in March last ; Mr. Richard Casey, who remains in charge of External Affairs ; and Senator Spooner, who will succeed Senator O'Sullivan as Government leader in the Senate. Of the 12 Cabinet Ministers, seven are Liberals and five are members of the Country Party.

Apart from Sir Arthur Fadden and Sir Philip McBride, who had retired from public life, and Senator O'Sullivan, who had retired from the Ministry at his own request, the only member of the former Government omitted from the new Administration was Mr. Allan Fairhall, who had been Minister of the Interior and Works since 1956. Mr. Menzies said that he was sorry to lose " for a time " the services of Mr. Fairhall, " but with complex constitutional problems arising in the immediate future I wished to avail myself of Sir Garfield Barwick, a leader of the Bar and eminent constitutional lawyer. It therefore became necessary to make a replacement, and I have done this with regret."

The new Australian Parliament opens on Feb. 17, 1959. As a result of the general election, Mr. Menzies' Government will have the biggest majority in the House of Representatives since federation in 1901.—(Sydney Morning Herald - Australian News and Information Bureau - Times) **(Prev. rep. Dissolution, 16364 D ; General Elections (1955), 14649 A ; Cabinet, 16140 A ; 15170 A.)**

A. WESTERN GERMANY. — New Government in Bavaria. - Dr. Seidel re-elected Land Premier.

The outgoing Prime Minister of Bavaria, Dr. Hanns Seidel (Christian Social Union), was re-elected on Dec. 9 by the new Bavarian *Landtag*, obtaining 120 votes against 63 for Dr. Hoegner, the former Social Democratic Prime Minister. On the same day Dr. Seidel announced the membership of his Ministry, as follows :

Dr. Hanns Seidel (C.S.U.), Prime Minister ; Herr Rudolf Eberhard (C.S.U.), Deputy Prime Minister and Finance ; Herr Alfons Goppel (C.S.U.), Interior ; Dr. Otto Schedl (C.S.U.), Economic Affairs ; Herr Walter Stain (Refugee Party), Labour ; Dr. Aloys Hundhammer (C.S.U.), Agriculture ; Dr. Albrecht Haas (Free Democrat), Justice ; Professor Theodor Maunz (C.S.U.), Education.

As shown, the Cabinet is based on a coalition between the Christian Social Union, the Refugee Party, and the Free Democrats.—(Die Welt, Hamburg) **(Prev. rep. 16540 B.)**

B. CEYLON. — Ministerial Appointment.

Senator Sarath Wijesinghe was appointed Minister of Nationalized Services and Road Transport with effect from Sept. 10, following the transfer of cargo handling at Colombo Port to a Government-owned corporation (see 16378 C) and the nationalization of all bus services (see 16277 B). The new Ministry will also be in charge of all ports, lighthouses, and road transport matters in general. Senator Wijesinghe was previously Parliamentary Secretary to the Minister of Finance.
(Ceylon Government Information Department) **(14849 A.)**

C. UNITED KINGDOM. — The Queen's Christmas Broadcast to Britain and the Commonwealth.

Her Majesty the Queen made the following Christmas Day broadcast from Sandringham House to the peoples of Britain and the Commonwealth :

" A happy Christmas to you all. Every year I look forward to opening the letters, parcels and telegrams that come to me from all parts of the world. My husband and children join me in thanking all of you who have sent us your good wishes for Christmas and the New Year.

" Some of you have written to say that you would like to see our children on television this afternoon. We value your interest in them and I can assure you that we have thought about this a great deal before deciding against it. We would like our son and daughter to grow up as normally as possible so that they will be able to serve you and the Commonwealth faithfully and well when they are old enough to do so. We believe that public life is not a fair burden to place on growing children. I am sure that all of you who are parents will understand.

" Very soon now we shall be entering into the uncertainty and promise of a New Year. I hope very much that it proves to be a year of progress and happiness for us all. My family and I are looking forward to it, especially because many of us will be travelling to different parts of the world and hope to see more of you than ever before.

" In three weeks' time my husband goes to India and Pakistan and then on across the Pacific. My mother is going to East Africa and my uncle, the Duke of Gloucester, and his wife, will be travelling as my representatives to Nigeria. My aunt, the Duchess of Kent, and my cousin, Princess Alexandra, are also undertaking long journeys. Together they will be visiting Central and South America in the Spring, and later Princess Alexandra goes to Australia to attend the centenary celebrations of the State of Queensland.

" In June my husband and I will be going to Canada once again. This time we go primarily to open the great St. Lawrence Seaway, but we shall be visiting many other parts of the country as well. Lastly, towards the end of the year we are going to Ghana, and on our way back we intend to visit my people in Sierra Leone and the Gambia. So, between us, we are going to many parts of the world. We have no plans for space travel at the moment.

" To Christians all over the world, Christmas is an occasion for family gatherings and celebrations, for presents and parties, for friendship and goodwill. To many of my people Christmas does not have the same religious significance. But friendship and goodwill are common to us all. So it is a good time to remember those around us who are far from home, feeling perhaps strange and lonely. My own thoughts are with the men, women, and children from other parts of the Commonwealth who have come to live and work in the great cities of this country and may well be missing the warmth and sunshine of their homelands.

" In recent years the Commonwealth countries have been making a great co-operative effort to raise standards of living Even so, the pace of our everyday life has been such that there has hardly been enough time to enjoy the things which appeal to men's minds and which make life a full experience. After all, our standard of living has a spiritual as well as a material aspect. The genius of scientists, inventors, and engineers can make life more comfortable and prosperous.

" But, throughout history, the spiritual and intellectual aspirations of mankind have been inspired by prophets and dreamers, philosophers, men of ideas and poets, artists in paint, sculpture and music, the whole company who challenge and give pleasure. To their number, I would add the teachers in church, school, and university, whose enormous job it is to awaken the minds of the younger generations and instil into them the essence of our accumulated civilization.

" I am sure that many of you have thought about these things before, but it seems to me that Christmas is just the time to be grateful to those who add fullness to our lives. Even so, we need something more. We all need the kind of security that one gets from a happy and united family. Before I return to mine, let me once again wish every one of you a very happy Christmas from all of us here at Sandringham, and may God's blessing be with you in the coming year."

Her Majesty's Christmas broadcast was televised, as on Christmas Day 1957.—(Times) **(Prev. rep. 15926 C.)**

D. INDIA. — Formation of National Mineral Development Corporation.

The Indian Minister for Mines and Oil, Mr. K. D. Malaviya, announced on Nov. 15 that the Government of India had set up a new company, under the name of the National Mineral Development Corporation (Private) Limited, with responsibility for exploiting minerals in the public sector as far as practicable, excluding oil, natural gas, and coal. The company will have an authorized capital of 150,000,000 rupees (£11,250,000) and will initially undertake the exploitation of iron-ore at Kiriburu (Orissa), near the Bihar border ; the ore will be exported to Japan under an agreement to supply 2,000,000 tons of iron-ore annually to the Japanese steel mills.
(Indian High Commissioner's Office, London)

A. ALGERIA.—Military Operations in Fourth Year of Algerian War (November 1957-November 1958). - Heavy Fighting in Tunisian Frontier Area. - French and Algerian Casualties.

The military situation in Algeria, which had greatly improved during the summer and autumn of 1957, again deteriorated in the early months of 1958. The insurgents' "National Liberation Army" showed itself to be better armed, trained, and organized than at any previous period, and inflicted heavy casualties on the French forces in a series of battles near the Tunisian frontier and elsewhere. By June, however, it had become apparent that the rebels' own casualties, which were far higher than at any time since the outbreak of the rebellion, were imposing an intolerable strain on them, and in consequence they reverted to smaller organizational units, guerrilla tactics, and an increased use of terrorism.

The principal developments in the military situation during the fourth year of the Algerian War (November 1957-November 1958) are described below under cross-headings :

The Insurgent Forces.

At the beginning of 1958 French military sources estimated the strength of the "Liberation Army" at 30,000 "regulars" and 30,000 reserves. Although insurgent casualties during the first seven months of the year were given in official French statements as 23,534 killed and captured (nearly four-fifths of their regular forces), the rebels' numbers remained approximately constant, as they found no difficulty in obtaining recruits among young Moslems ; in this connexion it was pointed out that there were 5,000,000 Moslems under 20 years of age in Algeria, constituting 56 per cent of the population. Spokesmen of the National Liberation Front (F.L.N.) claimed that they had 100,000 men under arms, including reserve and auxilliary formations in addition to fighting troops.

During the winter of 1957-58 a complete reorganization of the insurgent forces was carried out. Whereas in the summer of 1956, in view of the reinforcement of the French troops in Algeria, the insurgents had split up into small bands of about 30 men, they were reformed into battalions 380 strong, subdivided into companies and sections. Their organization was modelled on that of the French Army, in which many of the rebel commanders had served in Indo-China. As a result of the heavy casualties suffered by the insurgents in a number of pitched battles during the early months of 1958, however, they largely reverted in June to their earlier form of organization in smaller and more mobile bands.

Moslems serving in the French Army continued to desert to the insurgents during this period, though in smaller numbers than in previous years ; among them were 10 officers who joined the rebel forces in April 1958, after travelling secretly from France to Algeria via Tunis. M. Guillaumat (Minister of the Armed Forces in General de Gaulle's Cabinet) claimed on Nov. 12, 1958, that the number of Moslem deserters from the French forces had fallen from 366 in March 1956 to 80 in October 1958, whereas the number of insurgents coming over to the French had risen from only one in March 1956 to an average of 300 in July and August 1958.

Military operations during the early months of 1958 were largely dominated by the insurgents' attempts to increase the supply of arms entering the country from Tunisia and Libya. The French military authorities stated in August that 15,056 weapons had been captured from the rebels during the first seven months of the year. After the rebels' defeat in the "battle of the frontier" the smuggling of arms from Morocco increased, several camel caravans being intercepted in the Mecheria area of western Algeria.

The French Forces.

M. Chaban-Delmas (Defence Minister in M. Gaillard's Cabinet) stated on April 3, 1958, that the French Army had 370,000 men serving in Algeria ; if there were added the 30,000 members of the Air Force, the naval forces, the *harkas* (the Moslem "home guard" organized by the French), and 15,000 recruits undergoing training, the total French forces in Algeria numbered 450,000 men.

In view of the improvement in the military situation, M. Bourgès-Maunoury's Government decided in August 1957 to reduce the number of troops in Algeria by about 70,000 men by the end of 1958, and to reduce the term of military service from 27 months to two years. In accordance with this decision, contingents of conscripts were released after 24 months' service on Jan. 1 and March 1, 1958. After discussions with the High Command in Algiers, however, M. Chaban-Delmas stated on Feb. 7 that the forces in Algeria would be stabilized at their existing level ; he subsequently announced that a contingent which was to have been released on May 1 after two years' service would be retained for an indefinite period.

The need for maintaining such a large force in Algeria arose from the adoption of the system of *quadrillage*, a system whereby, in order to ensure the loyalty of the Moslem population and to protect them from insurgent terrorism, the great majority of the French troops were dispersed over the country in small units responsible for the defence of specific sectors. In consequence the bulk of the actual fighting fell to six parachute regiments, including parachute units of the Foreign Legion.

Military Operations.

The most important military operations during the fourth year of the war took place along the Tunisian frontier. To hamper the movement of arms and men across the border, the French had constructed in 1957 a defence system of electrified barbed-wire barriers, known as the "Morice Line," running from Bône to El-Ma-El-Abiod, south of Tebessa (see page 16184 and map on page 16203). The zone between this point and Negrine, on the edge of the Sahara, was controlled by radar, which gave warning of the approach of insurgent units.

The rebels nevertheless evolved a technique for dealing with the barrier ; on approaching it they would signal to their comrades on the other side, and would then cut the electrified wires simultaneously from both sides, using German or Italian wire-cutters insulated against 12,000 volts. The French detection system, however, gave immediate warning of any breach in the wires, and parachute troops and ground forces would be despatched to the spot in helicopters and jeeps. A long series of clashes took place in such circumstances during this period, culminating in a seven-day battle near Souk-Ahras (April 28-May 4) in which the rebels lost over 600 men.

Outside the Tunisian frontier area, heavy fighting occurred on numerous occasions in the area south of Algiers (between Blida, Médéa, Tablat, and Aumale), the Ouarsenis, the Saïda Mountains, the Grande Kabylie, the coastal area north of Constantine, and the Aurès ; both the French and the insurgents suffered many casualties in these engagements. Rebel attempts to hamper the exploitation of Algeria's oil resources by establishing a "Sahara front" were defeated by the intervention of French parachute troops in November 1957, but rail communications between the oilfields and the coast were sabotaged on several occasions.

The Tunisian Frontier. An insurgent arms convoy was intercepted on Nov. 4, 1957, north of Tebessa, losing 45 men killed ; 48 rebels were killed on Dec. 1 while trying to cross the electrified barrier near Souk-Ahras, whilst another band returning from Tunisia lost 75 killed in an action near Guelma on Dec. 10. Following these engagements, the rebels increasingly tended to circumvent the barrier by following routes farther to the south ; 121 were killed on Dec. 7 while attempting to enter Tunisia south of El-Ma-El-Abiod, and 70 more in an engagement on Dec. 19 east of Tebessa.

Two large forces of insurgent recruits were intercepted near the frontier in January 1958. A band of youths was attacked on Jan. 4 north-west of Tebessa while being escorted to Tunisia for training, losing 81 killed and 41 captured ; on Jan. 10 another force returning from training in Tunisia was virtually wiped out in the Djebel Tarf (east of Aïn-Beida), 116 men being killed and 31 captured.

An intensification of the arms traffic led to heavy fighting along the frontier from February to May ; 221 insurgents were killed in operations in the Guelma area from Jan. 27-Feb. 5 and 64 more when a band from Tunisia was wiped out near Khonchela on Feb. 9-11. The second half of February was marked by a series of major engagements in the vicinity of Guelma and Duvivier (30 miles south of Bône), in which over 500 insurgents were killed between Feb 14-26. On Feb. 27 an insurgent force which had crossed the frontier south of El-Ma-El-Abiod was detected by radar and intercepted in the Nementchas, losing 110 killed.

Although heavy snow caused a lull in operations during the first half of March, 30 members of a local unit employed to convoy recruits returning from Tunisia were killed in the Duvivier sector on March 6. A band entering Algeria by the southern route lost 26 killed when attacked in the Nementchas on March 8. Parachute troops attacked a strong insurgent force on March 18 between Bône and Duvivier, 122 rebels and 25 French soldiers being killed, while on March 29 a band about 450 strong was attacked while crossing the Morice Line in the same area, losing 160 killed. The insurgents suffered heavily in four engagements during the first half of April, 111 being killed west of Bir-El-Ater, 98 killed in two actions in the Souk-Ahras area, and 150 killed in the Nementchas.

After a force of nearly 1,000 well-armed rebels had attempted to break through the Morice Line north of Souk-Ahras, the biggest battle of the war to date began on April 28 and continued until May 3. The insurgents lost 436 killed and 100 captured, in addition to a large supply of arms ; 93 of the survivors were killed or captured in a subsequent action on May 4, about 250 withdrew into Tunisia, and the remainder escaped into the hills. French casualties were officially given as 38 killed and 33 wounded. In three smaller engagements in this area during May the insurgents lost 169 killed.

Rebel bands made several attempts to cross the border in the southern sector during the second half of June. A force of about 300 men crossing the border from Tunisia lost 45 killed and 64 captured on June 26 in an action near Tebessa, whereupon the remainder of the band retreated into Tunisia. Farther south, a party of recruits was intercepted near Bir-El-Ater on the same day, 30 being killed.

No large-scale engagements took place on the frontier between July and October, although several incidents gave rise to French or Tunisian protests. The French military authorities announced on July 16 that strong rebel forces coming from Tunisia and supported by firing from Tunisian territory had attacked two French units and blown up a railway line in the Tebessa area ; Tunisian official spokesmen, however, stated that the entire engagement had taken place on Algerian soil. During the night of Aug. 15-16 seven French posts in the same area were reported to have been fired on from the Tunisian side of the frontier or attacked by bands crossing the border from Tunisia.

The Tunisian Government formally protested on Sept. 18 against "repeated violations of the frontier," and in particular against two recent incidents in which, it was alleged, a Tunisian had been murdered by a French patrol and Tunisian territory had been bombarded. Both charges were denied by the French military authorities, who subsequently alleged that French units had been fired on across the frontier on Sept. 22 and again on Sept. 28.

Central and Western Algeria. In the Ouarsenis (one of the main centres of insurgent activity throughout this period) nine French soldiers were killed in an ambush between Relizane and Tiaret on Nov. 13, 1957; 40 rebels were killed in the ensuing operations. Another 41 insurgents were killed on Nov. 29-30 in an action 20 miles south of Algiers, and 26 more on Dec. 1 in the Collo peninsula, which had been largely controlled by the rebels since the summer of 1955. During the first fortnight of December 160 insurgents were killed in a series of engagements in the Kabylie and in the Constantine area.

The railway line from Touggourt to Philippeville, which is used for transporting oil from the Hassi-Messaoud wells (see 16153 A), was sabotaged on several occasions at the beginning of 1958. A goods train was blown up by a mine between Constantine and Philippeville on Jan. 8, the day before the first trainload of oil left Touggourt; another mine exploded on Jan. 26 under an armoured trolley patrolling the track between Biskra and Batna, seven men being killed; and on Feb. 3 an explosion wrecked a goods train in the same area, killing five people.

In western Algeria 80 rebels were killed in operations near Saïda on Jan. 7-8. An insurgent force wearing French uniforms killed 28 French soldiers on Jan. 16 in a surprise attack near Orléansville, whilst on Feb. 4 the rebels captured a post in the Hodna Mountains by a similar ruse, carrying off 17 of the garrison. The officer in command of the post was afterwards shot by the rebels as a reprisal (see below).

French casualties showed a marked increase during February, especially in the sector south of Algiers. Units which attempted unsuccessfully to encircle a large rebel force near Aumale on Feb 13 lost 15 killed and 17 wounded, and six aircraft were hit by machine-gun fire; the insurgents' casualties were 16 killed and seven captured. On the same day 12 French soldiers were killed and 17 wounded in an ambush near Médéa, whilst 13 soldiers were killed, 14 wounded, and a helicopter shot down in an action near Blida on Feb. 21 in which the insurgents lost only seven men. In fighting near Tablat 10 soldiers and 45 rebels were killed and 30 soldiers wounded on Feb. 24-25, and in the Ouarsenis another 10 soldiers were killed near Miliana on Feb. 26.

In the Aurès a strong rebel band was attacked by French parachutists and ground forces south of Batna on Feb. 23; prolonged hand-to-hand fighting ensued, in which the French lost 22 killed and 37 wounded and the insurgents 67 killed. On the same day 11 French soldiers were killed in an ambush near Akbou (in the Grande Kabylie), and on Feb. 25 a patrol was ambushed near Tenès (on the coast north of Orléansville), 24 men being killed. Total French casualties for the three days Feb. 23-25 were given as 67 killed—the highest for any comparable period of the war.

Heavy fighting continued south of Algiers during March. A well-armed rebel band about 300 strong fought its way out when encircled in the Aumale area on March 5; the French lost 17 killed and 45 wounded in a three-day battle, and the rebels 51 killed and 23 captured. A police party was ambushed near Médéa on March 13, losing 15 killed. On March 18 French parachute troops attacked a large force of insurgents, 170 of whom were killed, between Tablat and Médéa.

A French military convoy was ambushed on March 4 near Lafayette (in the Grande Kabylie), 16 soldiers being killed; 18 of the insurgent band responsible were subsequently killed in an action on March 11. In western Algeria 90 rebels were killed during the fortnight March 11-25 in three actions in the area between Saïda, Sidi-Bel-Abbès and Tlemcen. A rebel convoy carrying a supply of arms was attacked on March 16 in the Collo peninsula, 80 insurgents being killed.

The Algiers sector, the Ouarsenis, and the Grande Kabylie were the main theatres of operations (apart from the Tunisian frontier) during April and the first half of May, over 700 rebels being killed in a series of engagements in these areas. Extensive guerrilla warfare also developed during April in the coastal area between Bougie and Bône; 18 French soldiers were killed when military convoys were ambushed on April 11 and 20, motorists were frequently fired on, and farmhouses and villages were repeatedly raided, with the result that many settlers abandoned their farms. The French accordingly launched two operations in the area between Djidjelli and Philippeville, in which 262 rebels were killed between April 26 and May 11.

During French Army operations from May 28 - June 1 near Molière (in the Ouarsenis) 163 insurgents were killed and 31 captured; an *Air France* Dakota, believed to have been hit by rebel fire, crashed in the same area on May 31, killing the 14 people on board. In the coastal area west of Algiers, 52 insurgents were killed in the Cherchell area on June 4, whilst 40 rebels and 16 French soldiers were killed near Tenès during June 10-14. Several operations were reported from the southern Oranie during this period; 53 insurgents were killed in three engagements on May 23 in the area between Mecheria and Aïn-Sefra, and another 37 when a strong rebel band was attacked on May 27 south of Saïda. After a French force had been ambushed in the Saïda area on June 19, an action took place in which the French lost 16 killed and the rebels 21.

Military activity in the Grand Kabylie showed a marked increase during May and June. A rebel band was encircled on May 25 near Maillot, losing 25 killed, and another 25 insurgents were killed in the same area two days later. Six French soldiers were killed in an ambush near the coastal town of Port-Gueydon on June 11, and rebel commandos raided the towns of Tizi-Ouzou and Bône during the night of June 6-7. In operations in the Palestro area the insurgents lost 55 killed and the French 13 on June 14-16.

French ground and air forces carried out a large-scale operation on June 5-7 in the Aurès, between Batna and Khenchela, in which 93 insurgents were killed and 31 captured. After information had been received that a farm south of Médéa was to be attacked on June 4, the building was secretly occupied by troops who forced the attackers to withdraw with the loss of 31 killed.

No major engagements occurred during the first three weeks of July; 75 insurgents were killed in an action near Médéa on July 26, however, and 55 more on July 30 north of Bordj-Bou-Arreridj (in the Djurdjura). In the Bou-Saada area 117 rebels were killed on July 28, and 69 on Aug. 1. French troops carried out an operation in the Aurès from Aug. 7-12 during which 30 rebels were killed in an action near Batna. Elsewhere the insurgents lost 32 killed in the Boghari area (south of Médéa) and 47 in the Cherchell area in the fortnight Aug. 12-27.

During the first half of September a series of engagements took place in the area between the Ouarsenis and the Moroccan frontier in which 157 insurgents were killed. In the Aurès the rebels lost 93 killed when French infantry, supported by artillery and aircraft, encircled a strong insurgent force near Corneille (west of Batna) on Sept. 8; another rebel band was wiped out two days later south of Médéa, losing 68 killed and 26 captured.

The insurgents achieved a number of local successes during this period. In the Ouarsenis 10 French soldiers were killed in an ambush on July 31, and 19 in another ambush on Sept. 24. Between Batna and Biskra a train carrying troops and munitions caught fire when a mine exploded under it on Aug. 28, French casualties being given as 12 soldiers killed and 20 injured.

The French forces remained on the defensive during the second half of September, in order to protect the electorate from insurgent terrorism during the referendum on the new Constitution (see 16541A). In October, however, a series of offensives were launched against rebel strongholds in the 3,000-ft. Saïda Mountains and in the Grande Kabylie. During the fortnight Oct. 13-27 French infantry and parachute troops, supported by artillery and aircraft, killed 139 rebels in the area between Tiaret and Tlemcen, whilst in the Grande Kabylie and the Djurdjura 224 insurgents were killed, a rebel camp destroyed, and several tons of supplies captured in four operations in the second fortnight of October.

The Sahara. A rebel band, including Moslem soldiers of the Camel Corps who had deserted to the insurgents, ambushed an oil prospecting team north of Timimoun on Nov. 6, 1957, killing seven technicians and nine members of their military escort. Parachute troops commanded by Colonel Bigeard (one of the leading authorities on guerrilla warfare in the French Army) were flown to the area and attacked the rebels, who lost 40 killed. Another 120 insurgents were killed in subsequent engagements in the first week of December. Colonel Bigeard stated on Dec. 10 that although some 60 members of the band were still at large, the "Sahara front" to which F.L.N. propagandists had referred no longer existed.

A certain revival of insurgent activity in the Sahara occurred in the late summer of 1958. Near Colomb-Béchar 15 rebels were killed in an engagement on Aug. 20, and in the Brézina area (south of the Djebel-Amour) 13 French soldiers and three civilians were killed on Sept 19 when rebels ambushed a French force escorting an administrative officer.

Collaboration between French and Former Rebel Leaders. - Death of "General" Bellounis.

During the second half of 1957 the French military authorities concluded agreements with a number of former insurgent units whereby these formations, whilst retaining their own commanders and their semi-autonomous status, were paid and equipped by the French and co-operated with them against the rebels. The most important of these units was the "National Army of the Algerian People," a force about 4,500 strong composed of supporters of the Algerian National Movement (M.N.A.), under the command of "General" Mohammed Bellounis.

After fighting both the French and the F.L.N. in the Grande Kabylie and the Djurdjura since 1955, Bellounis concluded an agreement with the French on Nov. 6, 1957, whereby his force was entrusted with responsibility for operations over a large area between Aumale, Bou-Saada, and Aflou. In the spring of 1958, however, he largely lost control of his followers, who had increasingly fallen under F.L.N. influence. One of his officers mutinied and joined the rebels with 1,000 of his men, whilst another refused to withdraw from the Laghouat area when ordered to do so; when French troops were sent on May 1 to enforce the order, a pitched battle ensued in which 81 of Bellounis' men were killed.

After the Algiers *coup* of May 13 Bellounis himself turned against the French, and announced on June 16 that he was opposed to the integration of Algeria with France and would fight only for Algerian independence. He was killed in a clash with French troops near

Bou-Saada on July 14. The bodies of over 500 people murdered on his orders were found nearby after his death; the number of his victims exceeded those killed in the Melouza massacre of May 1957 (see page 16186), which took place when Bellounis was known to be in the immediate neighbourhood of Melouza.

A former F.L.N. commander, Si Chérif, went over to the French on July 20, 1957, with his band of about 300 men; this force rendered valuable service in the fighting in the Médéa area in the spring of 1958. Another F.L.N. leader, Belhadj Djilali, who commanded a force of some 500 in the Orléansville area, agreed to co-operate with the French in the autumn of 1957; he was murdered on April 29, 1958, by his officers, and about 350 of his force then joined the insurgents in the Ouarsenis.

Terrorist Activities.

Urban terrorism showed a marked decline during the early months of 1958, although there were two serious incidents in Constantine, where 72 people were injured by bomb explosions on Feb. 4 and March 26.

The Algiers *coup* of May 13 was followed by a revival of terrorism which reached its height during August, when 17 people (15 of them Europeans) were killed and 59 injured during the single week-end Aug. 9-10. The worst incidents occurred in western Algeria, notably at the village of Honaïne (near Nemours), where 22 Moslems (including eight women and two children) were murdered on Aug. 16 and three more during the night of Aug. 17-18. In other incidents in the Oranie, 10 people were killed and over 40 injured in a series of bomb explosions on Sept. 27-28, whilst an explosion in the main street of Tiaret on Oct. 30 killed 11 people and injured 24; the number of casualties was the highest for a single incident since the explosion in an Algiers dance-hall in June 1957 (see page 16187). It was believed that the main purpose of these incidents was, by terrorizing the Moslem population, to deter them from taking part in the referendum and the general elections.

Acts of terrorism in Algiers (usually in the form of grenades thrown into cafés and bars) became increasingly frequent in June and July. Several of these incidents were attributed to an M.N.A. group which had been formed with Bellounis' assistance after the suppression of the F.L.N. organization in Algiers in 1957: after 90 members of this group had been arrested the number of incidents fell to only one in August, but again increased in the next two months.

The great majority of the terrorists' victims were Moslems accused of collaboration with the French, including members of the special delegations (the provisional municipal and county councils—see page 15646), civil servants, police spies and informers, and members of the *harkas*. During the spring of 1958 the terrorists' activities were particularly directed against the members of special delegations, nine of whom were murdered in the single week April 5-11. F.L.N. spokesmen said that "collaborators" were sent repeated warnings; that they were "tried" by a "military tribunal" only if they refused to obey them; and that the carrying out of the "sentences" was entrusted to "commandos of death."

General Jacques Faure, the French Commander in the Kabylie, announced on Sept. 22 that his troops had discovered over 400 corpses at the insurgents' former headquarters in the Akfadou Forest. According to official French sources, "Colonel" Amirouche (the F.L.N. commander in the Kabylie) had begun a purge in June after discovering a plot against himself among a section of his men who had planned to surrender to the French, and wholesale executions had been ordered. Press correspondents were flown over the site of the massacre on Sept. 22 but were refused permission to land.

Treatment of Prisoners of War.

The F.L.N. leadership strongly protested on Feb. 5, 1958, and again on March 4, against death sentences repeatedly passed by French courts on captured members of the F.L.N., to whom the French Government refused to grant the status of prisoners of war. The second communiqué pointed out that since Jan. 11, when the F.L.N. captured four French soldiers whom the International Red Cross had found to be safe and well (see 16203 A), 15 insurgents had been guillotined and 11 more condemned to death; it gave warning that if this went on the "Liberation Army" would be "inevitably bound to react." Executions of captured terrorists nevertheless continued, 12 rebels being guillotined in April.

On May 9 the F.L.N. announced that three French soldiers who had been captured on Nov. 1, 1956, had been sentenced to death for alleged torture, rape, and murder by a special court of the "Liberation Army" and executed on April 30. F.L.N. spokesmen declared that the insurgents would "respect the laws of war only if the enemy does the same," and that a French soldier would be shot for every rebel guillotined.

A French officer, Lieutenant Dubos, who had been captured in the Hodna Mountains on Feb. 4, was shot near Bougie by "Colonel" Amirouche's order on July 9. In a letter to Dubos's parents, Amirouche offered on April 11 to exchange him for F.L.N. prisoners in French hands, and gave warning that "the lives of your son and his fellow-prisoners will answer for those of our brothers, who are inhumanly treated by your soldiers." A second letter of July 9 informed Lieutenant Dubos's parents that he had been shot as a reprisal for the alleged murder of an F.L.N. officer.

The four French soldiers captured near Sakhiet-Sidi-Youssef on Jan. 11 were handed over to representatives of the International Red Cross in Tunis on Oct. 20. M. Krim Belkacem, Vice-Premier in the F.L.N. Government-in-exile, stated that it had been decided to "celebrate the proclamation of the Algerian Government by a purely humanitarian gesture." General Salan announced later the same day that 10 rebels captured under arms would be released, this order being carried out on Nov. 3.

The Refugee Problem.

The Moroccan delegate to the U.N., M. Mahdi El-Mandira, told the Social Commission of the General Assembly on Nov. 4, 1958, that there were 130,000 Algerian refugees in Tunisia and 70,000 in Morocco; this represented a 100 per cent increase since the previous December, when the International Red Cross gave the number of refugees as 60,000 in Tunisia and 40,000 in Morocco.

The U.N. Social Commission approved on Nov. 6 (by 57 votes to two with 15 abstentions) a Moroccan-Tunisian resolution instructing the U.N. High Commissioner for Refugees to "continue his assistance to Algerian refugees in Tunisia and undertake similar activities in Morocco." Among the Western countries, Canada, Greece, and the U.S.A. supported the resolution; France and South Africa opposed; and Belgium, Italy, Luxemburg, Portugal, Spain, and the United Kingdom abstained.

Under an agreement between the U.S. and Tunisian Governments concluded on Jan. 28, 1958, the U.S.A. undertook to supply food to the value of 390,000,000 francs, or sufficient to feed 60,000 refugees for three months.

French and Algerian Casualties.

General de Gaulle stated on Oct. 23, 1958, that 7,200 French soldiers (an average of five a day for four years) and 77,000 insurgents had been killed in action since Nov. 1, 1954. A previous official statement issued on April 24 had given total casualties to that date as 6,000 Frenchmen and 62,000 rebels killed since the beginning of the Algerian war.

The French military authorities claimed on Aug 16 that 20,757 insurgents had been killed and 2,777 captured during the first seven months of 1958. The rebels' casualties had been heaviest during the "battle of the frontier" in the spring (3,401 killed and 529 captured in February, 3,132 killed and 715 captured in March, and 3,728 killed and 756 captured in April), and had somewhat declined in the next three months. French casualties reached 360 killed and 700 wounded in February (against 203 killed in February 1957), the highest for any month of the war. No detailed statistics of French casualties were published for any subsequent month.

General de Gaulle said in his statement of Oct. 23 that about 1,500 Europeans and over 10,000 Moslems had been killed as the result of insurgent terrorism.—(Le Monde - Le Figaro)

A. SWITZERLAND.—Election of President Chaudet. - Professor Wahlen joins Federal Government.

M. Paul Chaudet, head of the Federal Military Department, was elected President of the Swiss Confederation for 1959 at a meeting of the Joint Federal Assembly (i.e. the two Houses meeting in joint session) on Dec. 11. Signor Giuseppe Lepori, head of the Department of Posts, Telegraphs, and Railways, was elected Vice-President. M. Chaudet (54), a Radical Democrat from Canton Vaud, has been a member of the Federal Government since 1954 and was Vice-President in 1958.

On the same day the Joint Federal Assembly elected Professor Friedrich Traugott Wahlen as a new member of the Federal Council (the Swiss Government) in succession to Dr. Markus Feldmann, who had died on Nov. 3.

Professor Wahlen (59), an agricultural engineer, was head of the research department of the Canadian Department of Agriculture from 1922-29, and directed the Swiss Federal agricultural testing station at Zürich from 1929-43. In the following year he became Professor of Agriculture and Horticulture at Zurich Technical University. He was director of the agricultural department of the F.A.O. in 1949, and since 1957 had been Deputy Director-General of that organization. Like the late Dr. Feldmann, he is a member of the Farmers', Traders' and Citizens' Party.

Dr. Markus Feldmann (61), head of the Federal Department of Justice and Police, was chief editor of the *Neue Berner Zeitung* before entering the Federal Government in 1951; he had been a member of the National Council since 1935 and a member of the Berne Cantonal Government since 1945. As Central President of the Association of the Swiss Press he was one of Switzerland's foremost protagonists in defending the freedom of the Press during the Nazi regime in Germany, when he resisted strong pressure from the Third Reich to restrict the free expression of Swiss democratic opinion.

It was announced on Dec. 30 that Professor Wahlen would take over the Department of Justice and Police.

(Neue Zürcher Zeitung) **(Prev. rep. 15911 C; 14611 B.)**

A. **UNITED KINGDOM. — Strengthening of Overseas Information Services.**

Dr. Charles Hill (Chancellor of the Duchy of Lancaster, and Minister responsible for the co-ordination of the Government's information services) informed the House of Commons on Nov. 3 that a "substantial increase" would be made in the financial provision for British information services in India, Pakistan, Aden, British Somaliland, Kenya, Ethiopa, and Somalia (Italian Somaliland). He recalled that the amount allocated for the overseas information services had already been increased from £13,000,000 to £15,000,000 in 1957 (see 15688 A).

Dr. Hill stated that he had recently returned from a tour of British information services in the countries and territories concerned, undertaken to review the implementation of the 1957 recommendations. Although much progress had been made, he had concluded that a further intensification of effort was needed in these areas, where "populations are large, the problems complex, and competition for a hearing fierce." Minor improvements would be effected forthwith and some had been made in the course of his tour, e.g. the reopening of the British Council centre in Addis Ababa (which had been closed since 1951) and the opening of a similar centre in Somalia. He hoped to announce details of the proposed major developments and their estimated cost in the near future, and to publish them as a White Paper. In the meantime, plans would be worked out to effect improvements in three main fields: (1) the countering of hostile radio propaganda, (2) the supply of English-language books, and (3) the teaching of English.

Countering of Radio Propaganda. Dr. Hill said that "urgent consideration" would be given to increasing the transmitting strength of local broadcasting stations by technical improvements, and possibly by building relay stations. The quality of broadcast programmes would also be improved by providing an ample supply of tape-recorded material from London. The Government was mainly concerned with counteracting hostile radio propaganda in "the Middle East and the Horn of Africa," though other territories "were not being neglected." Information services in Arabic, Swahili, and Somali had already been expanded, but "more needs to be done." Time was all-important in correcting blatant mis-statements from hostile sources, and this was in the hands of language experts whose reports, through improved means of communication, would be transmitted with a minimum of delay from such local broadcasting stations as those in Aden, Hargeisa, and East Africa.

[*Note.*—The principal source of hostile propaganda to these territories is Cairo Radio, from which programmes in Arabic, Swahili, and Somali are broadcast almost continuously. Dr. Hill did not suggest "jamming" of such broadcasts as an effective countermeasure. The Government's long-term plans in this field are believed to include a limited television service, with receivers installed in public places (e.g. cafés) in centres of large population such as Aden and Bahrein.]

Supply of Books in English. The Government was developing both a short-term and a long-term policy to meet the great demand for books printed in English—particularly in India and Pakistan. The short-term solution would be the presentation of stocks of books to libraries and colleges, and a working party had been set up to consider other means.

Teaching of English. The Government intended to expand its programme for the teaching of English, and had been impressed by the "vast demand" for educational facilities in the areas which he (Dr. Hill) had visited. It was recognized that much more would have to be done to arrest the present decline of English as the language of education, culture, and commerce in the Indian subcontinent.

It was pointed out in the British press that the principal difficulty in connexion with the supply of British books to oversea countries was the inability of prospective readers to pay the economic price, owing to currency restrictions with which the Government had to comply. The U.S.S.R., on the other hand, subsidized the publications of Moscow's Foreign Languages Publishing House, whilst American publishers, by "blocking" currency for book sales and converting it into mutual aid, were enabled in effect to make a free gift of large numbers of books printed in the United States. It was also pointed out that an increasingly large number of books printed in English was being received in both India and Pakistan from the U.S.S.R. and China—mainly reprints of works by British and Russian authors, and children's books.

Anxiety at the Russian output of books in English was expressed by Sir Charles Snow (the well-known novelist), a member of the executive committee of the British Council, in the Council's annual report for 1957-1958 published on Nov. 18. Sir Charles pointed out that the Russians were spending on English publications alone "at least 10 times, and probably 20 times, what the British Council are able to spend abroad"; the Americans also were making full use of their much greater resources in the same field, while the British Council, limited to an expenditure of £170,000 on print for 1958-1959, could do little more than provide for the needs of "serious students." Sir Paul Sinker, Director-General of the British Council, suggested that the Government should consider the possibilities both of the American currency scheme and the Russian method of subsidy.—(Times - Daily Telegraph - Manchester Guardian) **(Prev. rep. 16100 B, 15688 A.)**

B. **BRAZIL - ITALY. — President Gronchi's Visit to Brazil. - The Declaration of São Paulo. - Military, Cultural, and Technical Co-operation Agreements.**

President Gronchi of Italy arrived in Rio de Janeiro on an official visit to Brazil on Sept. 4. Special significance was attached to his visit, not only because it was the first official visit by an Italian Head of State to Brazil, but also because the latter country contains the largest number of Italian immigrants in Latin America—nearly 3,000,000 Italians and persons of Italian descent living in the State of São Paulo alone. Moreover, Italian industry is closely interested in the economic and industrial development of Brazil.

During his visit President Gronchi had a number of discussions with President Kubitschek, and on Sept. 10 both Presidents issued a joint statement officially described as the "Declaration of São Paulo."

In this declaration Presidents Gronchi and Kubitschek appealed to all Latin-American countries, as well as to their "older sister-nations in Europe," to put aside all questions that might divide them and adopt a joint policy in national and international affairs. All Latin American countries, the declaration said, should define "in a concrete manner" the lines of their joint action "with a view to contributing to the solution of conflicts which endanger the security and freedom of numerous countries as well as the peace of the world." Such agreement and joint action would "not only benefit those countries which are united by the indestructible ties of their Latinity" but would also "enable them to take their place in the wider field of that solidarity which unites Western Europe and the great democracies of North America."

Military, cultural, and technical co-operation agreements between the two countries were also signed during President Gronchi's visit to Brazil.

The military agreement provided that persons who had completed their military service in either country should be exempt in the other. Under the cultural agreement, both Governments undertook to strengthen their literary, artistic, scientific, and technical links, and to establish in Florence a study centre for Brazilian agriculture. The third agreement covered technical and scientific co-operation, exchanges of students and professors for the peaceful use of nuclear energy, and the abolition of visas for travel between the two countries.

After his visits to Rio de Janeiro and São Paulo, President Gronchi also visited Brasilia (the new capital now being constructed), Belo Horizonte, and Porto Alegre before leaving for Rome on Sept. 14.—(Corriere d'Informazione, Milan - Corriere della Sera, Milan - Le Monde, Paris - Bank of London and South America Fortnightly Review)

C. **NEPAL. — King Mahendra's Visit to Soviet Union. - Acceptance of Soviet Economic Aid. - Agreements on U.S. and Indian Economic Aid to Nepal.**

At the Soviet Government's invitation, King Mahendra and Queen Ratna of Nepal paid a State visit to the Soviet Union in June 1958, during which the King had talks with M. Khrushchev, M. Gromyko, and other Soviet leaders, and visited Moscow, Kiev, Stalingrad, Tiflis, and Leningrad. A communiqué issued on June 23 stated that relations between the two countries were based on the "five principles of peaceful co-existence"; that the Soviet Union had agreed to grant economic aid to Nepal; and that President Voroshilov had accepted an invitation from King Mahendra to visit Nepal.

After leaving the Soviet Union the King and Queen made an unofficial foreign tour, visiting Finland, Sweden, Denmark, Norway, Belgium, France, Switzerland, Italy, Kenya, Pakistan, and India before returning to Khatmandu on Aug. 31.

A tripartite agreement between Nepal, the U.S.A. and India for the development of telecommunications within Nepal was signed in Khatmandu on June 29. The project (expected to be completed in 1960) provides for the establishment of 56 radio stations in Nepal and one each in Delhi and Calcutta, through which Nepal's overseas telecommunications will be directed. The United States will contribute $1,350,000 towards the cost and Nepal $57,000.

Under an agreement signed on Nov. 20, the Indian Government undertook to construct a hydro-electric project at Trisuli (30 miles from Khatmandu) which will supply power for the capital. The cost of the scheme was estimated at £2,600,000. (Soviet Embassy Press Department, London - The Statesman, Calcutta - Times) **(Prev. rep. Relations with Soviet Union, 15022 E; U.S. Aid, 16424 C; Indian Aid, 15986 B.)**

A. FRANCE. — Political Developments. - New Parties.

A number of new political parties and organizations were formed in France during the months following the Algerian uprising of May 13 and the subsequent investiture of General de Gaulle as Prime Minister. Among the traditional parties, the most important developments in the period preceding the referendum on the new Constitution (see 16541 A) were (*a*) the decision of the majority of the Socialist Party to support the Constitution ; (*b*) the formation of a breakaway Independent Socialist Party by a number of Socialists opposed to the Constitution ; (*c*) the decision of the majority of the Radical Party to support the Constitution, despite the campaign waged against it by M. Mendès-France ; and (*d*) the election of M. Gaillard as leader of the Radical Party.

Socialist Support for New Constitution.

After a four-day congress at Issy-les-Moulineaux, held on Sept. 11-14, the French Socialist Party (S.F.I.O.) decided to support the new Constitution by 2,687 votes to 1,176, with 62 abstentions—a majority of nearly 70 per cent of the delegates. M. Guy Mollet was re-elected secretary-general of the party by 3,146 votes out of 3,424 (the vote was taken on M. Mollet's report on the party's activities during the past year, thus constituting a vote of confidence in M. Mollet's continued leadership).

Speeches in support of the new Constitution were made by M. Mollet, M. Lacoste, M. Ramadier (Prime Minister in 1947) and M. Gaston Defferre, the last-named having been among the 49 Socialists who voted against General de Gaulle on the *vote d'investiture*. [M. Defferre is mayor of Marseilles and was formerly Minister for *France d'outre-mer*, in which capacity he drafted the *loi-cadre* for the African colonial territories—see 15585 A ; a leading left-wing Socialist, he was originally opposed to General de Gaulle but subsequently came out in support of the new Constitution.]

Opposition to the new Constitution was expressed by M. Pineau (the former Foreign Minister), M. Tanguy-Prigent, M. Gazier, and, in particular, by M. Edouard Depreux, a deputy for a Paris constituency in the last Parliament of the Fourth Republic.

In a speech lasting nearly three hours, M. Mollet expressed full confidence in General de Gaulle's loyalty to the Republic and urged that the Government should be allowed to carry its task through to a successful conclusion, particularly in Algeria ; in the latter connexion he expressed his conviction that General de Gaulle was the only man capable of solving the Algerian problem. M. Mollet repudiated the suggestion that the new Constitution could result in a dictatorship, and affirmed his belief that it would enhance, rather than detract from, the powers of Parliament.

M. Depreux denounced the new Constitution in a strongly-worded speech in which he claimed that he and his supporters were upholding the "true Socialist principles of Léon Blum." After asserting that the Constitution was likely to lead to a dictatorship and "neo-Boulangism," he declared that "democracy cannot co-exist with Committees of Public Safety an Army transformed into a political force, and the will of one man imposed on everyone."

As stated below, M. Depreux and his supporters left the Socialist Party after the conference and formed an opposition group under the name of the Independent Socialist Party. M. Pineau, M. Gazier, and M. Tanguy-Prigent, while maintaining their opposition to the Constitution, remained within the Socialist Party and undertook not to campaign against the Constitution during the pre-referendum period.

Two prominent ex-Communists, M. Auguste Lecoeur and M. Pierre Hervé, were admitted to membership of the Socialist Party on Oct. 21 at their own request. M. Lecoeur was organizing secretary of the Communist Party for four years prior to his expulsion for "deviationism" in 1954 (see 14687 B) ; M. Hervé was expelled in 1956 after publishing a book in which he criticized the party's policy and methods.

Since their expulsion from the Communist Party MM. Lecoeur and Hervé had formed a small political group, under the designation *Nation Socialiste*, aimed at uniting the Socialist and Communist parties. In a joint letter applying for membership of the Socialist Party, they stated that the "multiplicity of small organizations represents a serious obstacle to the regrouping of Socialist forces" and expressed their conviction that a unified Left-wing was only possible under the aegis of the Socialist Party.

Formation of Independent Socialist Party.

The Independent Socialist Party was officially constituted on Sept. 15, with M. Depreux as its secretary-general *ad interim*. Other former members of the Socialist Party joining the new group included M. Robert Verdier and M. Alain Savary (both deputies), M. Badiou (mayor of Toulouse), M. André Philip, M. Félix Gouin, and M. Daniel Mayer, the last-named having previously been suspended from the Socialist Party. Professor Francis Perrin, High Commissioner of the French Atomic Energy Authority, joined M. Depreux's party in October.

M. Depreux stated that the Independent Socialist Party would campaign against the new Constitution in collaboration with all non-Communist forces, and would align itself with the *Union des forces démocratiques* (see below) ; he denounced M. Mollet for having gone to "Canossa-les-Deux-Eglises" to negotiate with General de Gaulle during the crisis which followed the Algerian insurrection.

Radical Party's Support for Constitution. - M. Gaillard elected Party Leader.

At a two-day congress at Lyons on Sept. 12-13, the Radical Party decided by 716 votes to 544 to campaign for the new Constitution, which was thus supported by 56.8 per cent of the delegates and opposed by 43.2 per cent ; the decision represented a setback for M. Mendès-France, who spoke strongly against the Constitution but failed to carry a majority of the delegates with him. M. Félix Gaillard (Prime Minister from November 1957 to April 1958) was elected leader of the party by acclamation, no alternative candidature being presented. Among Radical leaders speaking in support of the Constitution were M. Gaillard, M. Maurice Faure and M. Billères ; opponents of the Constitution included three former Prime Ministers—M. Daladier, M. Bourgès-Maunoury, and M. Mendès-France.

The once united Radical Party is, in effect, split into three separate parties : (1) the official Radical Party, which is itself divided into "pro-Mendesian" and "anti-Mendesian" sections ; (2) the Dissident Radicals led by M. André Morice, who broke away from the Radicals after the Lyons congress of October 1956 in disagreement with M. Mendès-France (see 15247 A) ; and (3) the R.G.R. group (*Rassemblement de Gauche Republicain*) led by M. Edgar Faure, who was expelled from the main party in 1955 (see 14577 A, page 14581). All three Radical parties supported the new Constitution with the exception of the "Mendesian" section of the official party.

The Union for the New Republic.

A new Gaullist party under the designation Union for the New Republic (*Union pour la Nouvelle République*, or U.N.R.) was constituted on Nov. 13 under the leadership of M. Jacques Soustelle (the Minister of Information) and other prominent Gaullists, including M. Chaban-Delmas, M. Edmond Michelet, M. Léon Delbecque (one of the principal leaders of the Algiers *coup* of May 13) and M. Roger Frey, the last-named becoming secretary-general of the U.N.R.

The U.N.R. is, in effect, the successor of the Social Republican party, which had represented Gaullism in the National Assembly in recent years. At a press conference on Nov. 13, M. Frey explained that the U.N.R. represented the union of the Social Republicans with all the Gaullist movements which had sprung up since May 13 ; in the forthcoming general elections it would put forward 336 candidates for the 465 seats in metropolitan France, nearly all of whom would be young men "full of dynamism and untainted by the corrupt Fourth Republic." M. Frey made it clear that the U.N.R., while giving its fullest support to General de Gaulle, did not pretend to emanate from him or to speak in his name. In reply to questions, he said that the movement was neither "rightist" nor "leftist" but hoped one day to govern with the aid of the "right-centre" or "left-centre." He emphasized that the U.N.R. stood for the full integration of Algeria and the Sahara with metropolitan France.

In July last M Soustelle had announced his intention of creating a party under the designation *Union pour le renouveau français*—subsequently changed to *Union pour la Nouvelle République*—with the following aims : (1) "civic and moral reconstruction of the French nation united in a Republican framework round General de Gaulle" ; (2) creation of new Republican institutions and the ending of the system "which brought France to the brink of disaster" ; (3) "integration of Algeria and the Sahara" ; (4) "justice and social dignity" ; (5) the "creation of the greater France."

M. Soustelle explained that the U.N.R. would represent an extension to the metropolitan territory of a corresponding association in Algeria —the *Union pour le salut et le renouveau de Algérie française* (USRAF)—with similar aims and ideals ; the USRAF itself would remain in being and continue its activities "for the incorporation of our French provinces of Algeria and the Sahara within a France of 45,000,000 inhabitants."

The Republican Convention.

Another pro-Gaullist organization, the Republican Convention (*Convention Républicaine*), was formed in September with M. Leon Delbecque as its national commissioner (*commissaire national*). It is closely linked with, but distinct from, the U.N.R.

At its first meeting on Oct. 12, the National Council of the *Convention Républicaine* adopted a motion (drawn up by M. Delbecque) stating (1) that the *Convention* would " adhere to the U.N.R. to help win the coming electoral battle " ; (2) that it intended, however, to " preserve its personality and maintain its proper activities " ; (3) that it had instructed its representatives on the central committee of the U.N.R. " not to enter into any alliances with the political parties of the old system " ; (4) that the *Convention*, in collaboration with the U.N.R., would ensure that Gaullist candidates did not oppose each other in any constituency at the general election. It was also stated that " a true Gaullist doctrine capable of being opposed to out-of-date Marxism " would be formulated in due course.

The aims and policies of the *Convention Républicaine* are similar to those of the U.N.R., including the " total integration " of Algeria and the Sahara.

The Christian Democracy Movement.

M. Georges Bidault, the former Prime Minister and founder of the M.R.P., announced on July 8 the formation of a new organization under the name of the Christian Democracy Movement in France (*Mouvement de démocratie chrétienne en France*). He explained that it was not a new political party but sought to unite all Christians and " others who respect religious faiths " with the aim of " restoring democracy, ending parliamentary incoherence, building a Europe of fraternal fatherlands in a world at peace, and safeguarding for future generations the patrimony of France in Algeria and the oversea territories."

M. Bidault emphasized that the movement was not a confessional party but a purely political organization ; that it did not ask anyone to " deny his past, his loyalties, or his friends " ; and that it aimed at " uniting under the national colours those who love liberty, who hate totalitarian oppression, and who desire order and social justice."

The National Committee of Unity for Christian Democracy.

An organization with aims similar to those of M. Bidault's organization, but distinct from it, was founded on July 17 under the name of the National Committee of Unity for Christian Democracy (*Comité national d'entente pour la démocratie chrétienne*). Its founders included four leading members of the M.R.P.—M. Robert Schuman (a former Prime Minister), M. Maurice Schumann, M. Pierre-Henri Teitgen, and M. André Colin—in addition to a number of prominent personalities in the fields of trade unionism, industry, agriculture, education, and culture.

The aims of the *Comité national* were defined as follows : (1) " to combat those who wish to use the name of General de Gaulle to put an end once and for all to the régime of liberty " ; (2) " to build a Republic of the people and for the people " ; (3) " to build, in opposition to a colonialism and a fanaticism equally retrograde, a new Algeria in which the presence of France will be manifested by great democratic and human achievements " ; (4) to ensure respect for personal freedoms and family rights ; (5) to oppose Communism ; (6) to " resist imperialisms aimed at transforming the earth into an ant-hill."

The manifesto added : "Christian Democracy is not a confessional movement, nor does it aim at appropriating spiritual values for political ends. It respects the spiritual liberty of the [Roman Catholic] Church and of all Churches."

The *Comité national* was regarded in the French Press as a counter-movement to M. Bidault's organization formed a week earlier. Although M. Bidault is a member of the M.R.P., like many of the founders of the *Comité National*, he has been largely " isolated " in the party in view of his extreme right-wing attitude on the Algerian question.

The Union of Democratic Forces.

On the initiative of M. Daniel Mayer, president of the *Ligue des droits de l'homme*, an organization was founded in July under the designation Union of Democratic Forces (*Union des forces démocratiques*). Strongly opposed to the new Constitution, its leading members (in addition to M. Mayer) include M. Mendès-France, MM. Depreux and Verdier (now leaders of the Independent Socialist Party, see above), M. Mitterrand (of the U.D.S.R.), M. André Philip, Professor Francis Perrin, and M. Jean Hippolyte, director of the *Ecole normale supérieure*.

In a manifesto issued on July 22, the U.D.F. announced its intention of combating " Fascism in all its forms, any single-party system, any totalitarian regime, any system which suppresses the free expression of opinion, any military dictatorship, or the restoration of a new Vichyite order " (*un nouvel ordre vichyssois*). With regard to Algeria, the manifesto stated :

" To consolidate their position, the defenders of the colonial regime are trying to dominate the metropolitan territory. In resisting them . . . we aim at a new political association with the oversea territories based on free discussion and not on force. . . . This means scrupulous good faith towards the indigenous populations, in the first place in Algeria. ' Integration,' if it is not a fallacious pretext to continue the [Algerian] war and maintain the *status quo*, is merely a myth divorced from realities. Algerian nationalism has shown its existence in four years of war ; to deny it would be to lie once more to the French people. We must finally recognize, and without reservations, the right of the Algerian people to determine their own destiny. . . . "

As regards the political situation in France the manifesto stated . " The U.D.F. bases its attitude neither on confidence in, nor defiance of, one man. We do not forget the historic services which General de Gaulle has rendered to France. But in the circumstances which led to his return to power, we cannot overlook the presence at his side of men who were in the forefront of sedition. . . . "

The Centre of Republican Reform.

A number of deputies of the left-centre parties (Socialists, Radicals, and U.D.S.R.) set up an organization in July under the name of the Centre of Republican Reform (*Centre de la réforme républicaine*). Its leading adherents included M. Pierre Clostermann (the Free French air " ace " of the Second World War) and Senator Naudet, of the Radical Party ; M. Paul Alduy (Socialist), a member of the Consultative Committee which helped to draft the new Constitution ; M. Jean de Lipkowski, of the U.D.S.R. ; M. Georges Altman, former editor-in-chief of *Franc-Tireur* ; and M. Maurice Clavel, editor of *Combat*.

The *Centre* expressed full support for General de Gaulle and the new Constitution, but urged that " neither fascism nor conservatism must be allowed to weigh on General de Gaulle and prevent him from carrying out his mission as arbiter and constructor."

Split in U.D.S.R. Group.

Differences of opinion on the new Constitution led on Oct. 13 to a split in the small U.D.S.R. (left-centre) party. That section of the party led by M. René Pleven and supporting the new Constitution decided to break away from the main party (which remained under the leadership of M. Mitterrand, one of the leading opponents of the Constitution) and to make contact " with all republican groups with a view to reuniting French democrats " ; it also decided to maintain a permanent link with the R.D.A. (one of the two leading African parties), which is affiliated to the U.D.S.R.—(Le Monde, Paris) **(Prev. rep. New Constitution, 16529 A ; Referendum, 16541 A.)**

A. UNITED STATES. — Fourth Moon Shot.

A fourth " lunar probe " (*Pioneer III*) was launched at Cape Canaveral on Dec. 6 by the U.S. Army, following the three previous attempts by the U.S. Air Force The experiment was unsuccessful, the space vehicle reaching a height of 66,654 miles before re-entering the earth's atmosphere and disintegrating over the Sahara Desert.

The U.S. Army's " probe " was a four-stage vehicle 76 ft. in height and weighing over 60 tons, assembled as follows : (1) first stage—a *Juno II* rocket (the Army's development of the *Jupiter-C*) weighing 60 tons, details of thrust remaining secret ; (2) second stage—a cluster of 11 *Sergeant* rockets weighing 721 lb. ; (3) third stage—a cluster of three scaled-down *Sergeants* weighing 207 lb. ; (4) fourth stage—a scaled-down *Sergeant* weighing 59 lb., in the nose of which a cone-shaped instrument package was mounted. The 32-lb. package contained a radio transmitter, a photo-electric " eye " designed to scan the surface of the moon and transmit pictures, apparatus to measure radiation in space, and other equipment.

Dr. Wernher von Braun (the Army's rocket expert) explained that the experiment had failed because the launching speed (23,990 m.p.h.) was 540 m.p.h. short of the velocity needed to escape the earth's gravitational field ; had the first stage burned for 3.7 seconds longer, escape velocity would have been reached. Moreover, the " probe " was 3½ degrees off-course, which would have taken it less close to the moon than was intended. Nevertheless, the apparatus in the nose-cone had functioned perfectly and had transmitted valuable data about the intense radiation belt in outer space.

Unlike the three previous lunar probes, *Pioneer III* was not designed to go into a lunar orbit but to hit the moon directly or, alternatively, to enter its gravitational field and then veer off into an orbit round the sun, thus becoming a miniature " planet." The chances of a direct hit on the moon were regarded as small, but it was thought that if the " probe " missed the moon by as little as 10,000 miles or as much as 50,000 miles it would fly past it and go into a planetary orbit round the sun.—(New York Times) **(Prev. rep. 16485 B.)**

B. UNITED KINGDOM. — Parliament. - Government Whip restored to Colonel Banks.

It was announced on Dec. 18 that the Conservative Party Whip had been restored to Colonel Cyril Banks, M.P. for Pudsey, at his own request. Colonel Banks left the Conservative Party in November 1956 in disagreement with the Government's Suez policy and had since sat as an Independent.
(Times - Daily Telegraph) **(Prev. rep. 16523 C.)**

A. UNITED KINGDOM. — The Finance Act, 1958. - Dropping of Retrospective Legislation against "Dividend Stripping." - Concessions on Life Assurance Policies. - Increase in Initial Allowances for Industry.

The Finance Bill, 1958, embodying the provisions announced by the Chancellor of the Exchequer in his 1958-59 Budget (see 16113 A), received the Royal Assent on Aug. 1. It had been given a second reading in the House of Commons on May 12.

Prior to the second reading in the Commons, Mr. Heathcoat Amory announced on April 29 that he had decided to drop his proposal to make the legislation against "dividend stripping" retrospective to Oct. 25, 1955. The Chancellor's original intention, as announced in the Budget, had been strongly criticized in the City on the ground that it infringed the principle that legislation should not be retrospective; it was also argued that the informal warning that action would be taken against tax evaders, given by Mr. Henry Brooke (then Financial Secretary to the Treasury) in December 1955, was not adequate to justify such a drastic departure from principle.

The Chancellor's change of mind was strongly attacked by Mr. Harold Wilson and other Opposition members during the second reading debate.

Mr. Wilson accused the Chancellor of "surrendering against his better judgment" to "pressure from a highly expert, professionalized, highly-paid, and thoroughly unscrupulous tax-evasion industry." He gave a warning that if retrospective legislation against tax evaders were to be "outlawed," alternative steps might have to be considered to ensure that the Revenue was properly protected.

Mr. Heathcoat Amory, in reply, explained that he had originally considered that the Ministerial warnings given to "dividend strippers" in 1955 justified retrospective action in this "exceptional" instance. It had since been argued, however, that the warnings might not cover newer methods of "dividend stripping" which had been developed since 1955. Because of the importance of the "non-retrospective" principle, he felt that he should give the benefit of the doubt to those concerned and forego the small amount of revenue involved.

When moving the second reading, Mr. J. E. S. Simon (Financial Secretary to the Treasury) announced that the Government were reviewing the whole question of the treatment of life assurance policies under estate duty law.

Mr. Simon said that although it had not been possible to put forward final proposals in the Finance Bill, the Chancellor had agreed, while the matter was under consideration, to an interim concession as follows: Where a beneficiary was absolutely and indefeasibly entitled under an assurance policy to a sum of money payable on the death of another person, no duty would be charged thereon, on the death of the person assured, provided that the beneficiary became so entitled more than five years before the death, and that the assured had neither retained any benefit for himself nor paid any premium within the five years. Where the other conditions were satisfied but the assured had paid some premiums in the five years before his death, the claim to duty would be limited to a proportion of the policy moneys corresponding to the ratio between the premiums paid by him during the five-year period and the total premium.

Mr. Simon added that the concession, which was extra-statutory and would be made under the Income Tax Acts, would apply in respect of deaths after April 15, 1958. The Government hoped to legislate on the wider field of life assurance in 1959.

The Bill was given a second reading by 315 votes to 247. The principal Government amendments agreed to in the Committee and Report stages were as follows:

(1) To increase the initial allowances for (*a*) plant and machinery, and (*b*) industrial building, from 25 to 30 per cent and 12½ to 15 per cent respectively.

(2) To close various loopholes in existing legislation to control "dividend stripping."

(3) To amend the provisions dealing with settlements on children so as to prevent a parent from diverting part of his income to his minor children and using it for their support, thus in effect obtaining tax relief which he could not have obtained if he had made the payments out of his own declared income.

(4) To give effect to the recommendation of the Royal Commission on Taxation of Profits and Income (see 14729 A) that a taxpayer who had submitted incorrect accounts should be subject to the same penalty as if he had made incorrect tax returns.

(5) To exempt from Purchase Tax (*a*) buttons and (*b*) cane and wicker baskets without lids, and to reduce Purchase Tax on clogs and wooden-soled footwear to five per cent.

The following amendments by Conservative back-benchers were accepted by the Chancellor (sponsors' names in parentheses):

(6) To allow a British company to transfer assets from one subsidiary to another without attracting tax in Britain (**Sir Toby Low**).

(7) To provide that where a house was demolished under a demolition or clearance order made within five years of the death of the owner, the amount of estate duty payable should be reduced to the value of the compensation payable under the order (**Mr. Pickthorn**).

A number of amendments proposing reductions in Purchase Tax on various articles or the complete abolition of the tax on others were moved by Conservative and Labour members but were all defeated.

The goods for which a tax reduction was sought included certain proprietary medicines and drugs, bicycles, lorries and vans, sewing machines, stationery, office equipment, and cosmetics. Articles for which total tax exemption was sought included harps and other musical instruments, domestic furniture, various household requisites (e.g. baths, wash-boards, dustbins, smoothing irons, eating and drinking vessels, cooking and cleaning utensils), industrial protective garments, footwear, gloves, motor-cycle crash helmets, school furnishings and equipment, and articles for use in restaurants and hotels.

Other Opposition amendments, all unsuccessful, had the following objectives:

(*a*) To raise from 1s. 6d to 2s. the minimum figure at which cinema admissions would be liable to tax (**Mrs. Eirene White**). Defeated by 226 votes to 189.

(*b*) To limit Profits Tax on trades or businesses carried on by local or public authorities to three per cent (**Mr. Mitchison**) Rejected by 220 votes to 186 after Mr. Maudling had referred to the recommendation of the Royal Commission of Taxation of Profits and Income that, in charging Profits Tax, no distinction should be made between undertakings which distributed profits and those which did not.

(*c*) To ensure that Profits Tax on sports associations carried on as non-profit-making bodies should be limited to three per cent (**Mr. Hoy**). Rejected by 206 to 170.

(*d*) To limit Profits Tax on co-operative societies to three per cent (**Mr. Beswick**). Rejected by 215 to 178.

(*e*) To restore the full investment allowances for plant, machinery, and buildings in "industries of national importance" (**Mr. Roy Jenkins**). Rejected by 229 to 181.

(*f*) To exempt public service vehicles from fuel tax (**Mr. McLeavy**). Rejected by 201 to 162 after the Chancellor had pointed out that exemption for passenger vehicles would cost £33,000,000 a year.

(*g*) To increase income tax relief to claimants depending on a daughter's services from £40 to £50, and relief in respect of dependent relatives from £60 to £75 (**Mr. Houghton**). Rejected by 247 to 210 and 255 to 216 votes respectively after Mr. Simon had pointed out that they would cost about £7,000,000 a year.

(*h*) To extend "small incomes" relief from £300 to £350 and marginal relief from £350 to £450 (**Mr. Houghton**). Defeated by 253 votes to 216.

(*i*) To disqualify expenditure on private cars from the clause raising initial allowances on business expenditure (**Mr. Roy Jenkins**). Rejected by 238 to 196.

(*j*) To make Dec. 13, 1955 (the date of Mr. Brooke's warning—see above) the effective date after which "dividend stripping" would become illegal (**Mr. Eric Fletcher**). Rejected by 230 to 191.

The Bill was given an unopposed third reading in the House of Commons on July 18.—(Times - Daily Telegraph - Manchester Guardian - Financial Times) **(Prev. rep. Budget, 16113 A.)**

B. WESTERN GERMANY. — West Berlin Elections.

Elections for the House of Deputies in West Berlin were held on Dec. 7, resulting in an overall majority for the Social Democrats and the wiping-out of all the smaller parties. The distribution of seats in the new House was as follows, showing comparison with the previous (1954) elections:

	1958			1954	
	Seats	Votes	Per-centage	Seats	Per-centage
Social Democrats	78	849,883	52.6	64	44.6
Christian Democrats	55	608,927	37.7	44	30.4
Free Democrats	—	61,054	3.8	19	12.8
Free Democratic Association	—	10,675	0.7	(7)*	—
German Party	—	53,899	3.3	—	4.9
Socialist Unity Party	—	31,520	1.9	—	2.7
Others	—	—	—	—	4.6

* Following a split in the Free Democratic Party in 1956, seven seats formerly held by that party were taken over by the newly-formed Free Democratic Association.

The new House of Deputies has 133 seats, four more than the former House. The electorate totalled 1,752,861 and the number of votes cast 1,632,373 (93 7 per cent), of which 16,415 were invalid.

The result of the election, which coincided with the crisis over the status of West Berlin, was interpreted as an overwhelming expression of support for the retention of the city's present status and the rejection of the Soviet demands. The success of the Social Democrats was largely attributed to the personality of Herr Willy Brandt, the Chief Burgomaster.

The congress of the Social Democratic Party in West Berlin decided on Dec. 28, by a large majority, to continue the party's coalition in the City Government with the Christian Democrats, subject to certain policy conditions. The proposal was supported by Herr Brandt.—(Der Tagesspiegel, Berlin - Frankfurter Allgemeine Zeitung) **(Prev. rep. Elections, 14022 A; Berlin Crisis, 16517 A.)**

A. DIPLOMATIC APPOINTMENTS. — 1957-1958.

Mr. Shanahan had been New Zealand ambassador to Siam prior to April 1958, serving concurrently on the SEATO Council and also as New Zealand Commissioner in South-East Asia—a post created in 1956.

Norway.

Italy. Hr. Per Preben Prebensen, Ambassador in London, as Ambassador in Rome (July 1958). Hr. Prebensen had been at the London Embassy since 1946 and was *doyen* of the Diplomatic Corps in London.

Pakistan.

Belgium. Mr. Ghazanfar Ali Khan, formerly High Commissioner in New Delhi, as Ambassador in Brussels (June 1956).

Brazil. Mr. Mohammed Abdullah Khan, a leading member of the Moslem League in the Punjab, as Ambassador in Rio de Janeiro (May 1958). His predecessor in Rio was the Princess Abida Sultana (daughter of the Nawab of Bhopal), who resigned the ambassadorship in January last, she is Pakistan's second woman diplomat, the other being Begum Liaquat Ali Khan, Ambassador in The Hague.

China. Dr. A. M. Malik, Ambassador in Berne, as Ambassador in Peking (October 1958). Dr. Malik has held many portfolios in Pakistani Governments.

France. Mohammed Mir Khan, permanent Pakistani representative at the United Nations, as Ambassador in Paris (1957).

German Federal Republic. Mr. Jalaluddin Abdul Rahim, Secretary to the Ministry of Foreign Affairs and Commonwealth Relations, as Ambassador in Bonn (1956).

Iraq. Mr. Shuaib Qureshi, a career diplomat, as Ambassador to the Iraqi Republic (September 1958).

Italy. Mr. Habibur Rahman, formerly High Commissioner to Australia and New Zealand, as Ambassador in Rome *vice* Mr. Akhtar Hussain (June 1956).

Morocco and Tunisia. Mr. Shaheed Suhrawardy, Ambassador in Madrid, accredited concurrently to Morocco (April 1958) and Tunisia (October 1958).

Portugal. Mr. Mohammed Ikramullah, High Commissioner in London, appointed concurrently Ambassador to Portugal (September 1958), following the decision of the two Governments to raise their legations to embassy status.

Saudi Arabia. Mr. Ali Akbar Khan, Ambassador in Khartoum, as Ambassador to Saudi Arabia *vice* Khwaja Shahabuddin (September 1958).

Soviet Union. Mr. Akhtar Hussain, Ambassador in Rome, as Ambassador in Moscow (June 1956).

Sudan. Siddiq Ali Khan, High Commissioner in Colombo, as Ambassador in Khartoum *vice* Mr. Ali Akbar Khan (October 1958).

Turkey and Greece. Mr. M. S. Hassan, Joint Secretary, Ministry of External Affairs, as Ambassador in Ankara (December 1956) and concurrently Minister to Greece (April 1957).

United Arab Republic. Khwaja Shahabuddin, Ambassador to Saudi Arabia, as Ambassador in Cairo (October 1958).

United Nations. Prince Aly Khan, father of Aga Khan IV (Prince Karim, the spiritual leader of the Ismaili Moslems), as permanent Pakistani representative at the U.N. (February 1958).

United States. Mr. Mohammad Ali, Prime Minister of Pakistan for 13 months before his resignation in September 1957, as Ambassador in Washington *vice* Mr. Mohammed Ali, also a former Premier.

Persia.

Canada. Mr. Mahmood Esfandiary, Chief of the Division of Personnel and Budget, Ministry of External Affairs, as Ambassador in Ottawa (November 1958).

France. Mr. Nasrollah Entezam, Ambassador in Washington and a former President of the U.N. General Assembly, as Ambassador in Paris (January 1958).

United Kingdom. Mr. H. Ghods-Nakhai, a career diplomat, as Ambassador in London (September 1958). He has twice previously represented Persia in London—first before the war and again during the war, for 12 years in all.

United States. Dr. Ali Amini, Minister of Justice, as Ambassador in Washington *vice* Mr. Entezam (1956). Dr. Amini also held the Finance portfolio in Governments headed by Dr. Mossadeq and successor Ministries.

Poland.

India. Dr. Julius Katz-Suchy, vice-chairman of the U.N. Economic Commission for Europe and a leading Polish delegate at the U.N., as Ambassador in New Delhi (April 1957).

United Nations. Mr. Jerzy Michalowski, Under-Secretary of State, Ministry of Education, as permanent Polish representative at the U.N. (September 1956). Mr. Michalowski was formerly Ambassador in London

Portugal.

United Kingdom. General Abranches Pinto, Ambassador to South Africa, as Ambassador in London *vice* Dr. Teotonio Pereira, appointed deputy Prime Minister in the new Portuguese Government—see 16386 A. (November 1958).

South Africa.

Belgium. Mr. J. R. Jordaan, High Commissioner in Ottawa, as Ambassador in Brussels (November 1958).

Soviet Union.

Canada. Dr. A. A. Arutiunian as Ambassador in Ottawa (October 1958) A leading Soviet economist, he has played a prominent part in U.N. debates on economic and social questions.

Ceylon. Mr. Vladimir Yakovlev, a career diplomat, as the first Soviet Ambassador in Colombo (April 1958).

German Federal Republic. Mr. Andrei Smirnov, Ambassador in Vienna, as Ambassador in Bonn *vice* Mr. Valerian Zorin, who was recalled to Moscow to take up the post of Deputy Foreign Minister (October 1956). Mr. Zorin held the same post prior to his appointment in December 1955 as the U.S.S.R.'s first ambassador to Western Germany.

India. Mr. Panteleimon Ponomarenko, Ambassador in Warsaw, as Ambassador in New Delhi (and concurrently to Nepal) *vice* Mr. Mikhail Menshikov (October 1957). Mr. Menshikov was subsequently appointed Ambassador in Washington—see below.

Iraq. Mr. Grigori Zaitsev, a career diplomat, as Ambassador to the Iraqi Republic (August 1958). The former Royal Iraqi Government had broken off diplomatic relations with the U.S.S.R. in January 1955.

Israel. Mr. Mikhail Bodrov, a career diplomat, as Ambassador in Tel-Aviv *vice* Mr. Alexander Abramov (January 1958).

Italy. Mr. Semyon Pavlovich Kozyrev, a career diplomat, as Ambassador in Rome *vice* Mr. Bogomolov (April 1957)

Japan. Mr. Nikolai Fedorenko, a career diplomat, as Ambassador in Tokio *vice* Mr. Tevosyan (June 1958).

Morocco. Mr. Dmitri Pozhidayev, Minister in Berne, as the first Soviet Ambassador in Rabat (October 1958).

Turkey. Mr. N. S. Ryzhov, a career diplomat, as Ambassador in Ankara (April 1958).

United States. Mr. Mikhail Menshikov, Ambassador in New Delhi, as Ambassador in Washington (January 1958) *vice* Mr. Georgi Zarubin, who was subsequently appointed a Deputy Minister of Foreign Affairs. Mr. Menshikov was Minister of Foreign Trade before going to New Delhi as ambassador.

Spain.

India. Señor Don Luis de Olivares y Bruguera, Count de Artaza, as Ambassador in New Delhi following the decision of the two Governments to raise their legations to embassy level (August 1957). A career diplomat, he was Minister-Counsellor at the London Embassy before his Delhi appointment.

Portugal. Señor Ibanez Martin, formerly Minister of Education, as Ambassador in Lisbon *vice* Señor Nicolas Franco (a brother of General Franco), who had represented his country in Portugal since 1938 (January 1958).

United Arab Republic. Señor Don José Alcover, Ambassador in Rabat since 1956, as Ambassador to the U.A.R. (August 1958). Señor Alcover is regarded as one of Spain's most experienced diplomats on Arab affairs.

United Kingdom. The Marquis de Santa Cruz as Ambassador in London *vice* the Duke of Primo de Riveira (February 1958), who resigned on Jan. 29, 1958, after press reports that he intended to claim diplomatic immunity in connexion with a judicial separation suit in which he was cited, in a personal statement announcing his resignation, however, the Duke made it clear that he had no intention of relying on diplomatic immunity. The Duke is the son of the late General Primo de Riveira, who ruled Spain as a military dictator from 1923-30.

Sudan.

United Kingdom. Mr. Awad Satti, Director of Education in the Sudan, as the first Sudanese Ambassador in London (July 1956). He was formerly a mathematics lecturer at Gordon College (now the University of Khartoum).

Sweden.

United States. Hr. Gunnar Jarring, Swedish permanent representative at the U.N. since 1956, as Ambassador in Washington *vice* Hr Erik Boheman, retiring (May 1958). Hr. Jarring remained Swedish member of the Security Council, for whom he acted as mediator in the Indo-Pakistani dispute over Kashmir (see 15921 A, 15525 A).

United Kingdom.

Argentina. Sir John Ward, Deputy Under-Secretary at the Foreign Office, as Ambassador in Buenos Aires *vice* Sir Francis Evans, retiring (June 1957).

Austria. Sir James Bowker, Ambassador in Ankara, as Ambassador in Vienna *vice* Sir Geoffrey Wallinger (May 1958).

Brazil. Sir Geoffrey Wallinger, Ambassador in Vienna, as Ambassador in Rio de Janeiro *vice* Sir Geoffrey Harrison (July 1958).

Bulgaria. Mr. A. E. Lambert, Counsellor at H.M. Embassy in Athens, as Minister in Sofia *vice* Mr R. L. Speaight.

Chile. Mr Ivor Pink, Assistant Under-Secretary, Foreign Office, as Ambassador in Santiago *vice* Sir Charles Empson, retiring (January 1958)

Czechoslovakia. Mr. P. F. Grey, Assistant Under-Secretary, Foreign Office, as Ambassador in Prague *vice* Sir Clinton Pelham, retiring (May 1957).

Dominican Republic Mr. W. W. McVittie, Consul-General at Lisbon, as Ambassador in Ciudad Trujillo (January 1958).

Finland. Mr. D. L. Busk, Ambassador in Addis Ababa from 1952-56, as Ambassador in Helsinki *vice* Mr M. J. Creswell (February 1958).

Holy See. Sir Marcus Cheke as Minister to the Vatican (May 1957).

Hungary. Mr. N. J. A. Cheetham, Minister with the U.K. delegation to the North Atlantic Council in Paris, as Minister in Budapest *vice* Sir Leslie Fry (December 1958).

Iraq. Sir Humphrey Trevelyan, Under-Secretary at the United Nations in charge of special political questions, as Ambassador in Baghdad *vice* Sir Michael Wright (October 1958). Sir Humphrey was Ambassador in Cairo from August 1955 to October 1956, when Egypt broke off relations with Britain at the time of the Suez crisis.

[Sir Michael Wright had been appointed in July 1958 as Ambassador to the Arab Union of Iraq and Jordan; it was stated at the time that H.M. Ambassador in Amman (Mr. C. S. Johnston) would become "Minister in the Embassy and in charge of the offices in Amman" The Arab Union ceased to exist as a result of the revolution in Iraq —see 16323 B.]

Japan. Mr. O. C. Morland, Assistant Under-Secretary, Foreign Office, as Ambassador in Tokio *vice* Sir Daniel Lascelles, retiring (October 1958).

Laos. Mr. A. H. Lincoln, Counsellor at H.M. Embassy in Copenhagen, as Ambassador in Vientiane *vice* Mr. L. G. Holliday (January 1958).

Lebanon. Mr. P. M. Crosthwaite, Minister at the U.K. mission to the United Nations, as Ambassador in Beirut *vice* Sir George Middleton (May 1958).

Luxemburg. Mr. Harold Freese-Pennefather, Ambassador to Morocco, as Ambassador to Luxemburg (August 1957).

Nepal. Mr. Leonard Scopes as Ambassador in Khatmandu *vice* Mr. R. B. Tollinton (June 1957).

Nicaragua Mr. W. E. D. Massey, H.M. Consul at Bremen, as Ambassador in Managua *vice* Mr. H. F. A. Gates (December 1958).

Paraguay. Mr. H. F. A. Gates, Ambassador to Nicaragua, as Ambassador in Asunción *vice* Mr. J. W. Wall (December 1958).

Persia. Sir Geoffrey Harrison, Ambassador to Brazil, as Ambassador in Teheran *vice* Sir Roger Stevens, appointed Deputy Under-Secretary of State in the Foreign Office (July 1958).

Peru. Sir Berkeley Gage, Ambassador to Siam, as Ambassador in Lima *vice* Sir William Montagu-Pollock (February 1958).

Rumania. Mr. R. D. J. Scott Fox, Minister in the U.K. mission at the U.N., as Minister in Bucharest *vice* Mr. A. A. Dudley, who will take Mr Scott Fox's place in New York (December 1958).

Siam. Mr. (now Sir) Richard Whittington, senior inspector of Foreign Service establishments, as Ambassador in Bangkok *vice* Sir Berkeley Gage (April 1957).

Switzerland. Sir William Montagu-Pollock, Ambassador to Peru, as Ambassador in Berne *vice* Sir Lionel Lamb, retiring (January 1958).

Turkey. Sir Bernard Burrows, Political Resident in the Persian Gulf, as Ambassador in Ankara *vice* Sir James Bowker (May 1958) Sir Bernard was succeeded as Political Resident in the Persian Gulf by Sir George Middleton, formerly Ambassador in Beirut.

Uruguay. Mr. Malcolm Henderson, Ambassador to Luxemburg, as Ambassador in Montevideo *vice* Sir Reginald Jopson, deceased (August 1957).

United States.

Argentina. Mr. Willard L. Beaulac, Ambassador to Chile, as Ambassador in Buenos Aires *vice* Mr. Albert F. Nufer (1956).

Austria Mr. H. Freeman Matthews, Ambassador to the Netherlands, as Ambassador in Vienna *vice* Mr. Llewellyn Thompson (June 1957).

Canada. Representative Richard B. Wigglesworth (Republican, Massachusetts), as Ambassador in Ottawa *vice* Mr. Livingston Merchant, appointed Under-Secretary of State for European Affairs in the State Department (November 1958). Though not a career diplomat, Mr. Wigglesworth served as Paris representative and general counsel for organizations connected with the Dawes Plan after the First World War.

Ceylon. Mr. Lampton Berry, a career diplomat, as Ambassador in Colombo *vice* Mr. Maxwell H. Gluck (October 1958).

[Mr. Gluck, a wealthy businessman and owner of some 140 chain stores, had been appointed Ambassador to Ceylon in the summer of 1957. His appointment was strongly criticized by Democratic members of the Senate Foreign Relations Committee—notably by Senator Fulbright—on the grounds that he had contributed large sums of money to Republican Party funds in recent years and also that, on his own admission, he was unfamiliar with the names of the Prime Minister of Ceylon (Mr. Bandaranaike) and of leading political personalities in India. After a private hearing the Foreign Relations Committee agreed to Mr. Gluck's appointment, but decided to hold public hearings on all future ambassadorial appointments. Mr. Gluck's personal qualities for the ambassadorship were stressed by President Eisenhower and Mr. Dulles, and he accordingly took up his post in Colombo in September 1957. A year later, however, Mr. Gluck tendered his resignation on the ground of "the cumulative pressures of a number of different personal considerations."]

China (Nationalist). Mr. Everett F. Drummond, Consul-General at Hong Kong, as Ambassador in Taipeh *vice* Mr. Karl Rankin (February 1958).

Cuba. Mr. Earl Smith, a New York investment banker, as Ambassador in Havana (May 1957).

Greece. Mr. James Riddleberger, Ambassador to Yugoslavia, as Ambassador in Athens (November 1957).

Indonesia. Mr. John Allison, Ambassador to Japan, as Ambassador in Jakarta (January 1957).

Iraq. Mr. John Jernegan, Minister at the Rome Embassy, as Ambassador in Baghdad (December 1958).

Lebanon. Mr. Robert McClintock, of the State Department policy planning staff, as Ambassador in Beirut (December 1957).

Malaya. Mr. Homer Byington, a career diplomat, as the first U.S Ambassador in Kuala Lumpur (October 1957).

Mexico. Mr. Robert C. Hill, Assistant Secretary of State for Congressional Relations, as Ambassador in Mexico City (April 1957).

Morocco. Mr. Charles W. Yost, Ambassador to Syria until that country's merger with Egypt as the United Arab Republic, as Ambassador in Rabat *vice* Mr. Cavendish Cannon (July 1958).

Netherlands. Mr. Philip Young, formerly chairman of the Civil Service Commission, as Ambassador in The Hague *vice* Mr. H. Freeman Matthews (March 1957).

Pakistan. Mr. James M. Langley, a New Hampshire newspaper publisher, as Ambassador in Karachi (May 1957).

Poland. Mr. Jacob Beam, a career diplomat, as Ambassador in Warsaw (June 1957).

Portugal. Mr. C. Burke Elbrick, Assistant Secretary of State for European Affairs, as Ambassador in Lisbon (November 1958).

Rumania. Mr. Clifton R. Wharton, formerly Consul-General at Marseilles, as Minister in Bucharest (February 1958). A career diplomat, Mr. Wharton was the first Negro to head a U.S. diplomatic mission overseas.

Sweden. Mr. Francis White, Ambassador to Mexico, as Ambassador in Stockholm (April 1957).

Tunisia. Mr. G. Lewis Jones, a career diplomat, as the first U.S. Ambassador in Tunis (July 1956).

Yugoslavia.

Soviet Union. Mr. Lazar Mojsov, a senior official in the Yugoslav Foreign Ministry, as Ambassador in Moscow (November 1958). A member of the central committee of the Yugoslav League of Communists, he succeeded Mr. Veljko Micunovich.

United Kingdom. Mr. Ivo Vejvoda, Ambassador in Prague and former director of the Yugoslav News Agency (Tanjug), as Ambassador in London *vice* Dr. Velebit (August 1956).

The months in parentheses are in some cases those in which credentials were presented, and in others those in which the appointment was announced.—(Times - Daily Telegraph - Manchester Guardian - New York Times - New York Herald Tribune - Le Monde, Paris - Corriere della Sera, Milan - Frankfurter Allgemeine Zeitung - High Commission Offices in London of Canada, Australia, New Zealand, South Africa, India, Pakistan and Ceylon - Soviet Embassy Press Department, London - The Statesman, Calcutta - Netherlands News Agency - Tanjug Agency, Belgrade) **(Prev. rep. Appointments, Australia, 16099 B ; 14924 F ; 14847 C ; Belgium, 12792 D ; Canada, 15687 A ; Ceylon, 14762 B ; Denmark, 15923 C ; France, 15925 A ; Germany (West), 14864 A ; India, 16276 A ; 14026 C ; Italy, 13913 D ; Netherlands, 12450 D ; New Zealand, 14830 C ; Pakistan, 14406 C ; 13972 A ; Spain, 14946 A ; South Africa, 16449 C ; 14918 E ; U.K., 15660 C ; 15453 A ; U.S.A., 15516 A ; U.S.S.R., 16101 A.)**

Corrigendum. It was incorrectly stated in 15453 A that Mr. M. C. Gillett had succeeded Sir Esler Dening as British Ambassador to Afghanistan. Mr. Gillett in fact succeeded Sir Daniel Lascelles, who himself succeeded Sir Esler Dening as Ambassador in Tokio.

(Ed. K.C.A.)

A. ITALY. — Acquittal of Bishop of Prato.

The court of appeal in Florence decided on Oct. 25 to reverse the judgment of the lower court under which the Bishop of Prato (Mgr. Fiordelli) had been found guilty of defamation of Signor and Signora Bellandi ; the Bishop was accordingly acquitted on the ground that the conduct from which the action arose " did not constitute a crime," and the parish priest (Don Danilo Ajazzi) who read out and published the bishop's pastoral letter was also completely absolved. Signor and Signora Bellandi were ordered to pay the costs of the original trial and the appeal.

During the hearings on the bishop's appeal the public prosecutor had asked for his full acquittal on the grounds that Mgr. Fiordelli had acted without malicious intent and in the exercise of his spiritual ministry.—(Giornale d'Italia, Rome - Corriere della Sera, Milan) **(Prev. rep. 16191 A.)**

B. SPAIN. — First Nuclear Reactor.

An experimental nuclear reactor for medical and other research, supplied to Spain under the U.S. " Atoms-for-Peace " programme, was inaugurated by General Franco in Madrid on November 27. (Bank of London and South America)

C. UNITED KINGDOM. — Ending of Special Restrictions on Butter Imports. - Discussions with New Zealand on Future Policy.

The Board of Trade announced on Dec. 23 (i) that the U.K. Government was withdrawing its request to Sweden and Finland to limit their butter exports to Britain ; (ii) that the Irish Republic had been informed that the arrangements for further consultations on Irish butter exports could lapse ; (iii) that the restrictions on butter imports from Belgium were also being removed ; and (iv) that discussions were being held with the Polish Government about future arrangements for butter imports from Poland.

The statement said (*a*) that the British Government had reviewed the butter situation with the New Zealand Deputy Prime Minister, Mr. C. F. Skinner, as had been agreed last May ; and (*b*) that since the action taken at that time, following New Zealand's application under the Customs Duties (Dumping and Subsidies) Act, the United Kingdom market for New Zealand butter had changed and prices had risen.

The statement added, however, that " if at any future time imports of dumped or subsidized butter should assume such proportions as to cause or threaten material injury to N.Z. producers, action could again be initiated under the Act in respect of such imports. The U.K. Government have given Mr. Skinner their assurance that they would deal expeditiously with any application in the light of the requirements of the Act "

Both Mr. Skinner in London and the N.Z. Prime Minister (Mr. Nash) in Wellington expressed regret that the restrictions had been removed at the present stage and had not been maintained for 12 months. They recognized, however, the goodwill and value of the action taken by the U.K. in May last to restrict the flow of dumped and subsidized butter on to the U.K. market, and spoke of the " gratifying " rising trend in the price of butter over the past few weeks. Both Mr. Skinner and Mr. Nash expressed the view that the arrangements now made for close consultation between New Zealand and Britain on butter marketing, together with the assurances given by the U.K. Government, would help to prevent a repetition of the " disastrous marketing situation " which had occurred early in 1958.

Mr. Skinner had arrived in London on Nov. 26 and subsequently had a number of discussions with the Earl of Home (Secretary of State for Commonwealth Relations), Mr. John Hare (Minister of Agriculture), and Sir David Eccles (President of the Board of Trade.

It was stated at the beginning of October that the price for N.Z. butter in Britain had risen to 235s. per cwt., equivalent to 2s. 5d. per lb. retail.—(Times - Daily Telegraph - N.Z. Directorate of Information, Wellington - Auckland Star)

D. LITERATURE. — Book Selections for December. - Prix Goncourt Award for 1958.

Selected books published in Great Britain, the United States and France are given below :

Great Britain. Crossman, Richard—" The Charm of Politics." (Hamish Hamilton, 18s.).

Duggan, Alfred—" He Died Old : Mithradates Eupator, King of Pontus " (Faber & Faber, 18s.)

Fermor, Patrick Leigh—" Mani : Journeys in the Southern Peloponnese." (John Murray, 18s.)

Hanson, Lawrence and Elisabeth—" Verlaine, Prince of Poets." (Chatto & Windus with Secker & Warburg, 30s.)

Heuvelmans, Bernard—" On the Track of Unknown Animals." Translated from the French. (Rupert Hart-Davis, 35s.)

Noyce, Wilfrid—" Climbing the Fish's Tail." The Ascent of Machhapuchhar. (Heinemann, 18s.)

Smith, Cyril—" Duet for Three Hands." The Autobiography of a Pianist. (Angus & Robertson, 18s.)

United States. O'Hara, John—" From the Terrace." A Novel. (Random House, New York, $6.95)

France. Mallet-Joris, Françoise—" L'empire céleste." (Julliard, Paris, 1,200 francs). *Prix Fémina* award

Poirot-Delpech, Bertrand—" Le grand dadais." (Editions Denoël, Paris, 550 francs). *Prix Interallié* award.

Walder, Francis—" Saint-Germain, ou La négotiation." (N.R.F., Paris, 600 francs). *Prix Goncourt* award.

The *Prix Goncourt*, France's leading literary prize, was awarded on Dec. 1 to Francis Walder, a Belgian, for his historical novel *Saint-Germain, ou La Négotiation* (see above), which deals with the diplomatic negotiations surrounding the Peace of St.-Germain in 1570 between the French Protestants and Roman Catholics. M. Walder is a retired artillery officer of the Belgian Army.—(Ed. K.C.A. - Le Monde, Paris)

(Prev. rep. 16523 B ; Prix Goncourt, 15935 A.)

A. MEXICO. — Presidential and Congressional Elections. - Inauguration of President Lopez Mateos. - New Cabinet.

Señor Adolfo Lopez Mateos assumed office on Dec. 1 as President of Mexico for a six-year term in succession to President Ruiz Cortines, whose term of office had expired. President Lopez Mateos had been elected to the Presidency by an overwhelming majority on July 6, when presidential and congressional elections were held throughout the country.

Presidential Elections.

The presidential elections were contested by three candidates: Señor Adolfo Lopez Mateos, candidate of the ruling Institutional Revolutionary Party (*Partido Revolucionario Institucional*, or P.R.I.); Señor Luis H. Alvarez, candidate of the right-wing National Action Party (*Partido Acción Nacional*, or P.A.N.); and Señor Miguel Mendoza Lopez, a left-wing Roman Catholic lawyer who accepted nomination for the Mexican Communist Party, although not himself a Communist. Señor Adolfo Lopez Mateos polled 6,769,704 votes and Señor Alvarez 705,303, while the Communist candidate polled negligibly. The electorate numbered 10,443,465, of whom over 70 per cent went to the polls; women voted for the first time in a presidential election following the introduction of female franchise in 1952 (see 12822 C).

President Lopez Mateos (48) is a lawyer and had a distinguished academic career before entering politics. A leading member of the P.R.I., he had been Secretary of Labour since 1952, with a notable record as an industrial conciliator; in his five years at the Ministry of Labour he settled over 13,000 industrial disputes, only a few minor strikes occurring during that period.

Congressional Elections.

The P.R.I. won all 60 Senate seats and 150 of the 162 seats in the Federal Chamber of Deputies. Of the remaining seats in the Chamber, the National Action Party won six and the Popular Party, the Authentic Party of the Mexican Revolution, and the Nationalist Party of Mexico and APMR (joint list) one each; there were three results outstanding pending a decision by the Electoral College. The number of votes cast for the various parties in the Chamber elections was as follows:

	Votes	Percentage
Institutional Revolutionary Party (P.R.I.) ..	6,497,421	88.4
National Action Party	748,323	10.2
Popular Party	52,521	0.7
Authentic Party of the Mexican Revolution	33,267	0.4
National Party of Mexico	21,394	0.3

As in the presidential elections, polling was over 70 per cent of the electorate.

New Cabinet.

On assuming office on Dec. 1 President Lopez Mateos announced the membership of his Cabinet as follows:

Dr. Gustavo Diaz-Ordaz ..	Interior.
Señor Manuel Tello	Foreign Affairs.
General Agustin Olachea ..	Defence.
Dr. Antonio Ortiz Mena ..	Finance.
Señor Julian Rodriguez Adame..	Agriculture.
Dr. Jaime Torres Bodet ..	Education.
Dr. José Alvarez Amezquita ..	Health and Public Assistance.
Señor Javier Barros Sierra ..	Communications and Public Works.
Dr. Raul Salinas	National Economy.
Señor Alfredo del Mazo . ..	Hydraulic Resources.
Dr. Eduardo Bustamente ..	National Properties.
Vice-Admiral Zermeño Araico ..	Navy.
Dr. Fernando Lopez Arias ..	Attorney-General.
Señor Donato Miranda Fonseca..	Secretary to the Presidency.

Among the Ministers (all of whom were new), Señor Tello was formerly Ambassador to the U.S.A.; Señor Ortiz Mena was Director of Social Security; Señor Barros Sierra was a former professor of engineering at the Mexican National University; and Dr. Torres Bodet was formerly Director-General of the U.N. Educational, Social, and Cultural Organization (Unesco).

Another important appointment was that of Señor Pascual Gutierrez as Director of *Petroleos Mexicanos* (Pemex), the nationalized oil industry. Señor Gutierrez was formerly director of *Altos Hornos* (Mexico's largest steel works).

In his inaugural address President Lopez Mateos expressed the hope for closer inter-American relations, and spoke of the need to increase exports, to maintain a stable currency, and to intensify the anti-illiteracy campaign. In international affairs Mexico would work for peace "without aggressive hegemonies or intolerable interventions." Stressing that Mexico lacked capital and technologists, he said that private enterprise would be welcome provided it respected the Constitution and did not concentrate on "merely lucrative aims."

The P.R.I. has ruled Mexico under various designations for the past 40 years; it is regarded as the lineal successor of the victorious parties of the revolutionary era, which lasted from 1910 to 1924. With a view to ensuring the permanence of the revolutionary settlement, the Government of 1928 created its own party, the *Partido Nacional Revolucionario*, which was reorganized on a broader and more popular basis in 1946 as the present *Partido Revolucionario Institucional*. The P.R.I. claims to embody the ideals and aspirations of the Mexican revolution. (Mexican Ministry of Foreign Affairs - New York Times)

(Prev. rep. Presidential Election (1952), 12447 B; 12418 A; President Ruiz Cortines, 12600 A.)

B. NEW GUINEA. — Military Reinforcements for Dutch New Guinea. - Conference on Dutch-Australian Administrative Co-operation.

The Netherlands Government announced on June 30 that a "limited number" of troops would be sent to Dutch New Guinea to bring the defence of the territory (which since 1956 had been entrusted to the Navy, the Royal Netherlands Marines being the only land force in the area) into line with "new situations and technical developments." This phrase was believed to refer to the almost complete suppression of the rebellion in Indonesia, culminating in the capture of Menado on June 26, and the efficiency displayed by the Indonesian Army in the campaign. The Netherlands Defence Minister, Mr. Staf, had stated in May that no Indonesian attack on Dutch New Guinea was expected while the rebellion continued, but that measures had been taken in case the situation changed.

The Indonesian Foreign Minister (Dr. Subandrio) issued a statement on June 2 expressing surprise at the Netherlands Government's decision, which, he said, would "increase tension between the two countries."

On Nov. 28 the Netherlands Government announced that it would appeal for volunteers from anti-aircraft and commando units to strengthen the defence forces in New Guinea. This appeal was issued after the Cabinet had failed to reach agreement on a proposed amendment to the Military Service Act, aimed at abolishing the provision that servicemen might not be sent overseas without their consent, or, if they were under 21, without their parents' consent.

A conference on administrative co-operation between Dutch and Australian New Guinea was held in Canberra on Oct. 20-24 between officials of the Netherlands and Australian Governments and of the two territorial administrations.

Recommendations submitted to the two Governments included proposals for exchange of information between the territories, exchange visits by officials, the education of native students from Dutch New Guinea in Australia and Australian New Guinea, the establishment of joint technical and professional training centres for natives, and the pooling of the technical skill available in the two territories. It was recommended that similar conferences should be held annually.

In a press statement on Oct. 22, Dr. Subandrio said that Indonesia could "not remain indifferent" towards the Canberra conference. The "West Irian question" was an issue between Indonesia and the Netherlands, and a Dutch-Australian "alliance" on this matter would make the problem more difficult to solve and increase world tension.

Mr. Casey (the Australian Minister for External Affairs) stated on Oct. 25 that he would welcome a visit from Dr. Subandrio, as talks with him could help to clear up misconceptions which appeared to have arisen in Indonesia about Australia's attitude. In a further statement on Oct. 30, Mr. Casey said that the Australian Government fully accepted assurances which it had received from Dr. Subandrio that Indonesia would not use force to settle the New Guinea issue, and had no objection to the supply of arms to Indonesia by the U.S.A. for internal security purposes (see 16399 A).

It was announced in Canberra and Jakarta on Dec. 8 that Dr. Subandrio would visit Australia in February 1959 for discussions on the New Guinea question and other matters of mutual concern to Australia and Indonesia.

The Indonesian Government announced on Aug. 20 that it would not submit the New Guinea question to the forthcoming session of the U.N. General Assembly because the United Nations, "as at present composed," was not yet able to settle "problems of colonialism."—(Netherlands News Agency - Australian News and Information Bureau - Indonesian Embassy Press Office, London) **(Prev. rep. 15931 A; 16061 F.)**

C. ITALY. — Opening of New Motorway.

Signor Fanfani, the Italian Prime Minister, opened on Dec. 8 the first section of the new *Autostrada del Sole*, which will connect Milan with Naples. The section opened was that from Milan to Piacenza, the second section—from Piacenza to Parma—being opened to traffic on Dec. 15. The new *autostrada* will have a length of 730 kilometres (456 miles) when completed. (Corriere della Sera, Milan)
